

1 Day one, Calorie Counting

1.1 Predicament

Santa's reindeer typically eat regular reindeer food, but they need a lot of magical energy to deliver presents on Christmas. For that, their favorite snack is a special type of star fruit that only grows deep in the jungle. The Elves have brought you on their annual expedition to the grove where the fruit grows.

To supply enough magical energy, the expedition needs to retrieve a minimum of fifty stars by December 25th. Although the Elves assure you that the grove has plenty of fruit, you decide to grab any fruit you see along the way, just in case.

The jungle must be too overgrown and difficult to navigate in vehicles or access from the air; the Elves' expedition traditionally goes on foot. As your boats approach land, the Elves begin taking inventory of their supplies. One important consideration is food - in particular, the number of Calories each Elf is carrying.

The Elves take turns writing down the number of Calories contained by the various meals, snacks, rations, etc. that they've brought with them, one item per line. Each Elf separates their own inventory from the previous Elf's inventory (if any) by a blank line.

1.2 The code

Not too deep under this section, hidden in the background, resides the code which does the counting. After it runs, its results will be shown in section 1.3. The following text in this section is textual output of the code as it runs.

1.2.1 Code output

Let's prepare some variables and stuff first.

Now that all is prepared, let's go over lines.

I went over one line and it was 5800, which is a number, so I yanked the last elf from the list, **added 5800** to his number and stuck him back in, with a total of 5800.

I went over one line and it was 2273, which is a number, so I yanked the last elf from the list, **added 2273** to his number and stuck him back in, with a total of 8073.

I went over one line and it was 1315, which is a number, so I yanked the last elf from the list, **added 1315** to his number and stuck him back in, with a total of 9388.

I went over one line and it was 5801, which is a number, so I yanked the last elf from the list, **added 5801** to his number and stuck him back in, with a total of 15189.

I went over one line and it was 6352, which is a number, so I yanked the last elf from the list, **added 6352** to his number and stuck him back in, with a total of 21541.

I went over one line and it was 2649, which is a number, so I yanked the last elf from the list, **added 2649** to his number and stuck him back in, with a total of 24190.

I went over one line and it was 4140, which is a number, so I yanked the last elf from the list, **added 4140** to his number and stuck him back in, with a total of 28330.

I went over one line and it was 2115, which is a number, so I yanked the last elf from the list, **added 2115** to his number and stuck him back in, with a total of 30445.

I went over one line and it was 5298, which is a number, so I yanked the last elf from the list, **added 5298** to his number and stuck him back in, with a total of 35743.

I went over one line and it was 4441, which is a number, so I yanked the last elf from the list, **added 4441** to his number and stuck him back in, with a total of 40184.

I went over one line and it was 4428, which is a number, so I yanked the last elf from the list, **added 4428** to his number and stuck him back in, with a total of 44612.

I went over one line and it was 3773, which is a number, so I yanked the last elf from the list, **added 3773** to his number and stuck him back in, with a total of 48385.

I went over one line and it was 1076, which is a number, so I yanked the last elf from the list, **added 1076** to his number and stuck him back in, with a total of 49461.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8063, which is a number, so I yanked the last elf from the list, **added 8063** to his number and stuck him back in, with a total of 8063.

I went over one line and it was 10386, which is a number, so I yanked the last elf from the list, **added 10386** to his number and stuck him back in, with a total of 18449.

I went over one line and it was 5705, which is a number, so I yanked the last elf from the list, **added 5705** to his number and stuck him back in, with a total of 24154.

I went over one line and it was 8397, which is a number, so I yanked the last elf from the list, **added 8397** to his number and stuck him back in, with a total of 32551.

I went over one line and it was 1084, which is a number, so I yanked the last elf from the list, **added 1084** to his number and stuck him back in, with a total of 33635.

I went over one line and it was 7661, which is a number, so I yanked the last elf from the list, **added 7661** to his number and stuck him back in, with a total of 41296.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3661, which is a number, so I yanked the last elf from the list, **added 3661** to his number and stuck him back in, with a total of 3661.

I went over one line and it was 5756, which is a number, so I yanked the last elf from the list, **added 5756** to his number and stuck him back in, with a total of 9417.

I went over one line and it was 3231, which is a number, so I yanked the last elf from the list, **added 3231** to his number and stuck him back in, with a total of 12648.

I went over one line and it was 5162, which is a number, so I yanked the last elf from the list, **added 5162** to his number and stuck him back in, with a total of 17810.

I went over one line and it was 4930, which is a number, so I yanked the last elf from the list, **added 4930** to his number and stuck him back in, with a total of 22740.

I went over one line and it was 4675, which is a number, so I yanked the last elf from the list, **added 4675** to his number and stuck him back in, with a total of 27415.

I went over one line and it was 1113, which is a number, so I yanked the last elf from the list, **added 1113** to his number and stuck him back in, with a total of 28528.

I went over one line and it was 6795, which is a number, so I yanked the last elf from the list, **added 6795** to his number and stuck him back in, with a total of 35323.

I went over one line and it was 6415, which is a number, so I yanked the last elf from the list, **added 6415** to his number and stuck him back in, with a total of 41738.

I went over one line and it was 1144, which is a number, so I yanked the last elf from the list, **added 1144** to his number and stuck him back in, with a total of 42882.

I went over one line and it was 2900, which is a number, so I yanked the last elf from the list, **added 2900** to his number and stuck him back in, with a total of 45782.

I went over one line and it was 5147, which is a number, so I yanked the last elf from the list, **added 5147** to his number and stuck him back in, with a total of 50929.

I went over one line and it was 2966, which is a number, so I yanked the last elf from the list, **added 2966** to his number and stuck him back in, with a total of 53895.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 35187, which is a number, so I yanked the last elf from the list, **added 35187** to his number and stuck him back in, with a total of 35187.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 12434, which is a number, so I yanked the last elf from the list, **added 12434** to his number and stuck him back in, with a total of 12434.

I went over one line and it was 2038, which is a number, so I yanked the last elf from the list, **added 2038** to his number and stuck him back in, with a total of 14472.

I went over one line and it was 12435, which is a number, so I yanked the last elf from the list, **added 12435** to his number and stuck him back in, with

a total of 26907.

I went over one line and it was 8757, which is a number, so I yanked the last elf from the list, **added 8757** to his number and stuck him back in, with a total of 35664.

I went over one line and it was 6976, which is a number, so I yanked the last elf from the list, **added 6976** to his number and stuck him back in, with a total of 42640.

I went over one line and it was 4532, which is a number, so I yanked the last elf from the list, **added 4532** to his number and stuck him back in, with a total of 47172.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4642, which is a number, so I yanked the last elf from the list, **added 4642** to his number and stuck him back in, with a total of 4642.

I went over one line and it was 4431, which is a number, so I yanked the last elf from the list, **added 4431** to his number and stuck him back in, with a total of 9073.

I went over one line and it was 5126, which is a number, so I yanked the last elf from the list, **added 5126** to his number and stuck him back in, with a total of 14199.

I went over one line and it was 4672, which is a number, so I yanked the last elf from the list, **added 4672** to his number and stuck him back in, with a total of 18871.

I went over one line and it was 1724, which is a number, so I yanked the last elf from the list, **added 1724** to his number and stuck him back in, with a total of 20595.

I went over one line and it was 3012, which is a number, so I yanked the last elf from the list, **added 3012** to his number and stuck him back in, with a total of 23607.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3801, which is a number, so I yanked the last elf from the list, **added 3801** to his number and stuck him back in, with a total of 3801.

I went over one line and it was 6564, which is a number, so I yanked the last elf from the list, **added 6564** to his number and stuck him back in, with a total of 10365.

I went over one line and it was 5401, which is a number, so I yanked the last elf from the list, **added 5401** to his number and stuck him back in, with a total of 15766.

I went over one line and it was 3913, which is a number, so I yanked the last elf from the list, **added 3913** to his number and stuck him back in, with a total of 19679.

I went over one line and it was 3090, which is a number, so I yanked the last elf from the list, **added 3090** to his number and stuck him back in, with a total of 22769.

I went over one line and it was 1484, which is a number, so I yanked the last elf from the list, **added 1484** to his number and stuck him back in, with a total of 24253.

I went over one line and it was 6227, which is a number, so I yanked the last elf from the list, **added 6227** to his number and stuck him back in, with a total of 30480.

I went over one line and it was 1283, which is a number, so I yanked the last elf from the list, **added 1283** to his number and stuck him back in, with a total of 31763.

I went over one line and it was 2501, which is a number, so I yanked the last elf from the list, **added 2501** to his number and stuck him back in, with a total of 34264.

I went over one line and it was 4601, which is a number, so I yanked the last elf from the list, **added 4601** to his number and stuck him back in, with a total of 38865.

I went over one line and it was 5860, which is a number, so I yanked the last elf from the list, **added 5860** to his number and stuck him back in, with a total of 44725.

I went over one line and it was 7036, which is a number, so I yanked the last elf from the list, **added 7036** to his number and stuck him back in, with a total of 51761.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 19257, which is a number, so I yanked the last elf from the list, **added 19257** to his number and stuck him back in, with a total of 19257.

I went over one line and it was 31867, which is a number, so I yanked the last elf from the list, **added 31867** to his number and stuck him back in, with a total of 51124.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4292, which is a number, so I yanked the last elf from the list, **added 4292** to his number and stuck him back in, with a total of 4292.

I went over one line and it was 4518, which is a number, so I yanked the last elf from the list, **added 4518** to his number and stuck him back in, with a total of 8810.

I went over one line and it was 1298, which is a number, so I yanked the last elf from the list, **added 1298** to his number and stuck him back in, with a total of 10108.

I went over one line and it was 13147, which is a number, so I yanked the last elf from the list, **added 13147** to his number and stuck him back in, with a total of 23255.

I went over one line and it was 7463, which is a number, so I yanked the last elf from the list, **added 7463** to his number and stuck him back in, with a total of 30718.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6784, which is a number, so I yanked the last elf from the list, **added 6784** to his number and stuck him back in, with a total of 6784.

I went over one line and it was 1065, which is a number, so I yanked the last elf from the list, **added 1065** to his number and stuck him back in, with a total of 7849.

I went over one line and it was 4015, which is a number, so I yanked the last elf from the list, **added 4015** to his number and stuck him back in, with a total of 11864.

I went over one line and it was 3154, which is a number, so I yanked the last elf from the list, **added 3154** to his number and stuck him back in, with a total

of 15018.

I went over one line and it was 6429, which is a number, so I yanked the last elf from the list, **added 6429** to his number and stuck him back in, with a total of 21447.

I went over one line and it was 5067, which is a number, so I yanked the last elf from the list, **added 5067** to his number and stuck him back in, with a total of 26514.

I went over one line and it was 6535, which is a number, so I yanked the last elf from the list, **added 6535** to his number and stuck him back in, with a total of 33049.

I went over one line and it was 5731, which is a number, so I yanked the last elf from the list, **added 5731** to his number and stuck him back in, with a total of 38780.

I went over one line and it was 1270, which is a number, so I yanked the last elf from the list, **added 1270** to his number and stuck him back in, with a total of 40050.

I went over one line and it was 5870, which is a number, so I yanked the last elf from the list, **added 5870** to his number and stuck him back in, with a total of 45920.

I went over one line and it was 4934, which is a number, so I yanked the last elf from the list, **added 4934** to his number and stuck him back in, with a total of 50854.

I went over one line and it was 2800, which is a number, so I yanked the last elf from the list, **added 2800** to his number and stuck him back in, with a total of 53654.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5227, which is a number, so I yanked the last elf from the list, **added 5227** to his number and stuck him back in, with a total of 5227.

I went over one line and it was 6294, which is a number, so I yanked the last elf from the list, **added 6294** to his number and stuck him back in, with a total of 11521.

I went over one line and it was 6733, which is a number, so I yanked the last elf from the list, **added 6733** to his number and stuck him back in, with a total

of 18254.

I went over one line and it was 5177, which is a number, so I yanked the last elf from the list, **added 5177** to his number and stuck him back in, with a total of 23431.

I went over one line and it was 2773, which is a number, so I yanked the last elf from the list, **added 2773** to his number and stuck him back in, with a total of 26204.

I went over one line and it was 6553, which is a number, so I yanked the last elf from the list, **added 6553** to his number and stuck him back in, with a total of 32757.

I went over one line and it was 3219, which is a number, so I yanked the last elf from the list, **added 3219** to his number and stuck him back in, with a total of 35976.

I went over one line and it was 1446, which is a number, so I yanked the last elf from the list, **added 1446** to his number and stuck him back in, with a total of 37422.

I went over one line and it was 7005, which is a number, so I yanked the last elf from the list, **added 7005** to his number and stuck him back in, with a total of 44427.

I went over one line and it was 6036, which is a number, so I yanked the last elf from the list, **added 6036** to his number and stuck him back in, with a total of 50463.

I went over one line and it was 6872, which is a number, so I yanked the last elf from the list, **added 6872** to his number and stuck him back in, with a total of 57335.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1721, which is a number, so I yanked the last elf from the list, **added 1721** to his number and stuck him back in, with a total of 1721.

I went over one line and it was 4408, which is a number, so I yanked the last elf from the list, **added 4408** to his number and stuck him back in, with a total of 6129.

I went over one line and it was 5577, which is a number, so I yanked the last elf from the list, **added 5577** to his number and stuck him back in, with a total

of 11706.

I went over one line and it was 2799, which is a number, so I yanked the last elf from the list, **added 2799** to his number and stuck him back in, with a total of 14505.

I went over one line and it was 2257, which is a number, so I yanked the last elf from the list, **added 2257** to his number and stuck him back in, with a total of 16762.

I went over one line and it was 3149, which is a number, so I yanked the last elf from the list, **added 3149** to his number and stuck him back in, with a total of 19911.

I went over one line and it was 2389, which is a number, so I yanked the last elf from the list, **added 2389** to his number and stuck him back in, with a total of 22300.

I went over one line and it was 3713, which is a number, so I yanked the last elf from the list, **added 3713** to his number and stuck him back in, with a total of 26013.

I went over one line and it was 5588, which is a number, so I yanked the last elf from the list, **added 5588** to his number and stuck him back in, with a total of 31601.

I went over one line and it was 2324, which is a number, so I yanked the last elf from the list, **added 2324** to his number and stuck him back in, with a total of 33925.

I went over one line and it was 4595, which is a number, so I yanked the last elf from the list, **added 4595** to his number and stuck him back in, with a total of 38520.

I went over one line and it was 6018, which is a number, so I yanked the last elf from the list, **added 6018** to his number and stuck him back in, with a total of 44538.

I went over one line and it was 4926, which is a number, so I yanked the last elf from the list, **added 4926** to his number and stuck him back in, with a total of 49464.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1233, which is a number, so I yanked the last elf from the list, **added 1233** to his number and stuck him back in, with a total

of 1233.

I went over one line and it was 4799, which is a number, so I yanked the last elf from the list, **added 4799** to his number and stuck him back in, with a total of 6032.

I went over one line and it was 3380, which is a number, so I yanked the last elf from the list, **added 3380** to his number and stuck him back in, with a total of 9412.

I went over one line and it was 1975, which is a number, so I yanked the last elf from the list, **added 1975** to his number and stuck him back in, with a total of 11387.

I went over one line and it was 1924, which is a number, so I yanked the last elf from the list, **added 1924** to his number and stuck him back in, with a total of 13311.

I went over one line and it was 1578, which is a number, so I yanked the last elf from the list, **added 1578** to his number and stuck him back in, with a total of 14889.

I went over one line and it was 2338, which is a number, so I yanked the last elf from the list, **added 2338** to his number and stuck him back in, with a total of 17227.

I went over one line and it was 1546, which is a number, so I yanked the last elf from the list, **added 1546** to his number and stuck him back in, with a total of 18773.

I went over one line and it was 3708, which is a number, so I yanked the last elf from the list, **added 3708** to his number and stuck him back in, with a total of 22481.

I went over one line and it was 4020, which is a number, so I yanked the last elf from the list, **added 4020** to his number and stuck him back in, with a total of 26501.

I went over one line and it was 5872, which is a number, so I yanked the last elf from the list, **added 5872** to his number and stuck him back in, with a total of 32373.

I went over one line and it was 2519, which is a number, so I yanked the last elf from the list, **added 2519** to his number and stuck him back in, with a total of 34892.

I went over one line and it was 5334, which is a number, so I yanked the last elf from the list, **added 5334** to his number and stuck him back in, with a total of 40226.

I went over one line and it was 4416, which is a number, so I yanked the last elf from the list, **added 4416** to his number and stuck him back in, with a total of 44642.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 18103, which is a number, so I yanked the last elf from the list, **added 18103** to his number and stuck him back in, with a total of 18103.

I went over one line and it was 1692, which is a number, so I yanked the last elf from the list, **added 1692** to his number and stuck him back in, with a total of 19795.

I went over one line and it was 10497, which is a number, so I yanked the last elf from the list, **added 10497** to his number and stuck him back in, with a total of 30292.

I went over one line and it was 6786, which is a number, so I yanked the last elf from the list, **added 6786** to his number and stuck him back in, with a total of 37078.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4837, which is a number, so I yanked the last elf from the list, **added 4837** to his number and stuck him back in, with a total of 4837.

I went over one line and it was 12315, which is a number, so I yanked the last elf from the list, **added 12315** to his number and stuck him back in, with a total of 17152.

I went over one line and it was 6510, which is a number, so I yanked the last elf from the list, **added 6510** to his number and stuck him back in, with a total of 23662.

I went over one line and it was 9221, which is a number, so I yanked the last elf from the list, **added 9221** to his number and stuck him back in, with a total of 32883.

I went over one line and it was 10023, which is a number, so I yanked the last elf from the list, **added 10023** to his number and stuck him back in, with

a total of 42906.

I went over one line and it was 5698, which is a number, so I yanked the last elf from the list, **added 5698** to his number and stuck him back in, with a total of 48604.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9781, which is a number, so I yanked the last elf from the list, **added 9781** to his number and stuck him back in, with a total of 9781.

I went over one line and it was 18818, which is a number, so I yanked the last elf from the list, **added 18818** to his number and stuck him back in, with a total of 28599.

I went over one line and it was 19784, which is a number, so I yanked the last elf from the list, **added 19784** to his number and stuck him back in, with a total of 48383.

I went over one line and it was 5100, which is a number, so I yanked the last elf from the list, **added 5100** to his number and stuck him back in, with a total of 53483.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7596, which is a number, so I yanked the last elf from the list, **added 7596** to his number and stuck him back in, with a total of 7596.

I went over one line and it was 14668, which is a number, so I yanked the last elf from the list, **added 14668** to his number and stuck him back in, with a total of 22264.

I went over one line and it was 18708, which is a number, so I yanked the last elf from the list, **added 18708** to his number and stuck him back in, with a total of 40972.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1932, which is a number, so I yanked the last elf from the list, **added 1932** to his number and stuck him back in, with a total of 1932.

I went over one line and it was 18024, which is a number, so I yanked the last elf from the list, **added 18024** to his number and stuck him back in, with

a total of 19956.

I went over one line and it was 6361, which is a number, so I yanked the last elf from the list, **added 6361** to his number and stuck him back in, with a total of 26317.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7302, which is a number, so I yanked the last elf from the list, **added 7302** to his number and stuck him back in, with a total of 7302.

I went over one line and it was 5163, which is a number, so I yanked the last elf from the list, **added 5163** to his number and stuck him back in, with a total of 12465.

I went over one line and it was 9039, which is a number, so I yanked the last elf from the list, **added 9039** to his number and stuck him back in, with a total of 21504.

I went over one line and it was 4774, which is a number, so I yanked the last elf from the list, **added 4774** to his number and stuck him back in, with a total of 26278.

I went over one line and it was 8726, which is a number, so I yanked the last elf from the list, **added 8726** to his number and stuck him back in, with a total of 35004.

I went over one line and it was 6538, which is a number, so I yanked the last elf from the list, **added 6538** to his number and stuck him back in, with a total of 41542.

I went over one line and it was 2054, which is a number, so I yanked the last elf from the list, **added 2054** to his number and stuck him back in, with a total of 43596.

I went over one line and it was 7238, which is a number, so I yanked the last elf from the list, **added 7238** to his number and stuck him back in, with a total of 50834.

I went over one line and it was 4233, which is a number, so I yanked the last elf from the list, **added 4233** to his number and stuck him back in, with a total of 55067.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3375, which is a number, so I yanked the last elf from the list, **added 3375** to his number and stuck him back in, with a total of 3375.

I went over one line and it was 6049, which is a number, so I yanked the last elf from the list, **added 6049** to his number and stuck him back in, with a total of 9424.

I went over one line and it was 4925, which is a number, so I yanked the last elf from the list, **added 4925** to his number and stuck him back in, with a total of 14349.

I went over one line and it was 7129, which is a number, so I yanked the last elf from the list, **added 7129** to his number and stuck him back in, with a total of 21478.

I went over one line and it was 6075, which is a number, so I yanked the last elf from the list, **added 6075** to his number and stuck him back in, with a total of 27553.

I went over one line and it was 1262, which is a number, so I yanked the last elf from the list, **added 1262** to his number and stuck him back in, with a total of 28815.

I went over one line and it was 3836, which is a number, so I yanked the last elf from the list, **added 3836** to his number and stuck him back in, with a total of 32651.

I went over one line and it was 5878, which is a number, so I yanked the last elf from the list, **added 5878** to his number and stuck him back in, with a total of 38529.

I went over one line and it was 3292, which is a number, so I yanked the last elf from the list, **added 3292** to his number and stuck him back in, with a total of 41821.

I went over one line and it was 1316, which is a number, so I yanked the last elf from the list, **added 1316** to his number and stuck him back in, with a total of 43137.

I went over one line and it was 3924, which is a number, so I yanked the last elf from the list, **added 3924** to his number and stuck him back in, with a total of 47061.

I went over one line and it was 3530, which is a number, so I yanked the last elf from the list, **added 3530** to his number and stuck him back in, with a total

of 50591.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8653, which is a number, so I yanked the last elf from the list, **added 8653** to his number and stuck him back in, with a total of 8653.

I went over one line and it was 21172, which is a number, so I yanked the last elf from the list, **added 21172** to his number and stuck him back in, with a total of 29825.

I went over one line and it was 18837, which is a number, so I yanked the last elf from the list, **added 18837** to his number and stuck him back in, with a total of 48662.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8052, which is a number, so I yanked the last elf from the list, **added 8052** to his number and stuck him back in, with a total of 8052.

I went over one line and it was 1672, which is a number, so I yanked the last elf from the list, **added 1672** to his number and stuck him back in, with a total of 9724.

I went over one line and it was 2962, which is a number, so I yanked the last elf from the list, **added 2962** to his number and stuck him back in, with a total of 12686.

I went over one line and it was 3270, which is a number, so I yanked the last elf from the list, **added 3270** to his number and stuck him back in, with a total of 15956.

I went over one line and it was 8160, which is a number, so I yanked the last elf from the list, **added 8160** to his number and stuck him back in, with a total of 24116.

I went over one line and it was 3033, which is a number, so I yanked the last elf from the list, **added 3033** to his number and stuck him back in, with a total of 27149.

I went over one line and it was 2004, which is a number, so I yanked the last elf from the list, **added 2004** to his number and stuck him back in, with a total of 29153.

I went over one line and it was 7774, which is a number, so I yanked the last elf from the list, **added 7774** to his number and stuck him back in, with a total of 36927.

I went over one line and it was 8182, which is a number, so I yanked the last elf from the list, **added 8182** to his number and stuck him back in, with a total of 45109.

I went over one line and it was 3047, which is a number, so I yanked the last elf from the list, **added 3047** to his number and stuck him back in, with a total of 48156.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7917, which is a number, so I yanked the last elf from the list, **added 7917** to his number and stuck him back in, with a total of 7917.

I went over one line and it was 2458, which is a number, so I yanked the last elf from the list, **added 2458** to his number and stuck him back in, with a total of 10375.

I went over one line and it was 1040, which is a number, so I yanked the last elf from the list, **added 1040** to his number and stuck him back in, with a total of 11415.

I went over one line and it was 7210, which is a number, so I yanked the last elf from the list, **added 7210** to his number and stuck him back in, with a total of 18625.

I went over one line and it was 7742, which is a number, so I yanked the last elf from the list, **added 7742** to his number and stuck him back in, with a total of 26367.

I went over one line and it was 4296, which is a number, so I yanked the last elf from the list, **added 4296** to his number and stuck him back in, with a total of 30663.

I went over one line and it was 2861, which is a number, so I yanked the last elf from the list, **added 2861** to his number and stuck him back in, with a total of 33524.

I went over one line and it was 9324, which is a number, so I yanked the last elf from the list, **added 9324** to his number and stuck him back in, with a total of 42848.

I went over one line and it was 5721, which is a number, so I yanked the last elf from the list, **added 5721** to his number and stuck him back in, with a total of 48569.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 17851, which is a number, so I yanked the last elf from the list, **added 17851** to his number and stuck him back in, with a total of 17851.

I went over one line and it was 11236, which is a number, so I yanked the last elf from the list, **added 11236** to his number and stuck him back in, with a total of 29087.

I went over one line and it was 7107, which is a number, so I yanked the last elf from the list, **added 7107** to his number and stuck him back in, with a total of 36194.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6962, which is a number, so I yanked the last elf from the list, **added 6962** to his number and stuck him back in, with a total of 6962.

I went over one line and it was 4498, which is a number, so I yanked the last elf from the list, **added 4498** to his number and stuck him back in, with a total of 11460.

I went over one line and it was 10042, which is a number, so I yanked the last elf from the list, **added 10042** to his number and stuck him back in, with a total of 21502.

I went over one line and it was 4539, which is a number, so I yanked the last elf from the list, **added 4539** to his number and stuck him back in, with a total of 26041.

I went over one line and it was 10759, which is a number, so I yanked the last elf from the list, **added 10759** to his number and stuck him back in, with a total of 36800.

I went over one line and it was 8378, which is a number, so I yanked the last elf from the list, **added 8378** to his number and stuck him back in, with a total of 45178.

I went over one line and it was 5781, which is a number, so I yanked the last elf from the list, **added 5781** to his number and stuck him back in, with a total

of 50959.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7156, which is a number, so I yanked the last elf from the list, **added 7156** to his number and stuck him back in, with a total of 7156.

I went over one line and it was 10063, which is a number, so I yanked the last elf from the list, **added 10063** to his number and stuck him back in, with a total of 17219.

I went over one line and it was 5329, which is a number, so I yanked the last elf from the list, **added 5329** to his number and stuck him back in, with a total of 22548.

I went over one line and it was 2449, which is a number, so I yanked the last elf from the list, **added 2449** to his number and stuck him back in, with a total of 24997.

I went over one line and it was 4749, which is a number, so I yanked the last elf from the list, **added 4749** to his number and stuck him back in, with a total of 29746.

I went over one line and it was 6498, which is a number, so I yanked the last elf from the list, **added 6498** to his number and stuck him back in, with a total of 36244.

I went over one line and it was 6493, which is a number, so I yanked the last elf from the list, **added 6493** to his number and stuck him back in, with a total of 42737.

I went over one line and it was 1924, which is a number, so I yanked the last elf from the list, **added 1924** to his number and stuck him back in, with a total of 44661.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2161, which is a number, so I yanked the last elf from the list, **added 2161** to his number and stuck him back in, with a total of 2161.

I went over one line and it was 1309, which is a number, so I yanked the last elf from the list, **added 1309** to his number and stuck him back in, with a total of 3470.

I went over one line and it was 1770, which is a number, so I yanked the last elf from the list, **added 1770** to his number and stuck him back in, with a total of 5240.

I went over one line and it was 3195, which is a number, so I yanked the last elf from the list, **added 3195** to his number and stuck him back in, with a total of 8435.

I went over one line and it was 1581, which is a number, so I yanked the last elf from the list, **added 1581** to his number and stuck him back in, with a total of 10016.

I went over one line and it was 1194, which is a number, so I yanked the last elf from the list, **added 1194** to his number and stuck him back in, with a total of 11210.

I went over one line and it was 1455, which is a number, so I yanked the last elf from the list, **added 1455** to his number and stuck him back in, with a total of 12665.

I went over one line and it was 1350, which is a number, so I yanked the last elf from the list, **added 1350** to his number and stuck him back in, with a total of 14015.

I went over one line and it was 5298, which is a number, so I yanked the last elf from the list, **added 5298** to his number and stuck him back in, with a total of 19313.

I went over one line and it was 5290, which is a number, so I yanked the last elf from the list, **added 5290** to his number and stuck him back in, with a total of 24603.

I went over one line and it was 1872, which is a number, so I yanked the last elf from the list, **added 1872** to his number and stuck him back in, with a total of 26475.

I went over one line and it was 2155, which is a number, so I yanked the last elf from the list, **added 2155** to his number and stuck him back in, with a total of 28630.

I went over one line and it was 3060, which is a number, so I yanked the last elf from the list, **added 3060** to his number and stuck him back in, with a total of 31690.

I went over one line and it was 1514, which is a number, so I yanked the last elf from the list, **added 1514** to his number and stuck him back in, with a total

of 33204.

I went over one line and it was 1872, which is a number, so I yanked the last elf from the list, **added 1872** to his number and stuck him back in, with a total of 35076.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9664, which is a number, so I yanked the last elf from the list, **added 9664** to his number and stuck him back in, with a total of 9664.

I went over one line and it was 14392, which is a number, so I yanked the last elf from the list, **added 14392** to his number and stuck him back in, with a total of 24056.

I went over one line and it was 10201, which is a number, so I yanked the last elf from the list, **added 10201** to his number and stuck him back in, with a total of 34257.

I went over one line and it was 12693, which is a number, so I yanked the last elf from the list, **added 12693** to his number and stuck him back in, with a total of 46950.

I went over one line and it was 8817, which is a number, so I yanked the last elf from the list, **added 8817** to his number and stuck him back in, with a total of 55767.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4960, which is a number, so I yanked the last elf from the list, **added 4960** to his number and stuck him back in, with a total of 4960.

I went over one line and it was 2281, which is a number, so I yanked the last elf from the list, **added 2281** to his number and stuck him back in, with a total of 7241.

I went over one line and it was 6321, which is a number, so I yanked the last elf from the list, **added 6321** to his number and stuck him back in, with a total of 13562.

I went over one line and it was 4953, which is a number, so I yanked the last elf from the list, **added 4953** to his number and stuck him back in, with a total of 18515.

I went over one line and it was 1439, which is a number, so I yanked the last elf from the list, **added 1439** to his number and stuck him back in, with a total of 19954.

I went over one line and it was 1372, which is a number, so I yanked the last elf from the list, **added 1372** to his number and stuck him back in, with a total of 21326.

I went over one line and it was 5253, which is a number, so I yanked the last elf from the list, **added 5253** to his number and stuck him back in, with a total of 26579.

I went over one line and it was 2338, which is a number, so I yanked the last elf from the list, **added 2338** to his number and stuck him back in, with a total of 28917.

I went over one line and it was 2516, which is a number, so I yanked the last elf from the list, **added 2516** to his number and stuck him back in, with a total of 31433.

I went over one line and it was 6332, which is a number, so I yanked the last elf from the list, **added 6332** to his number and stuck him back in, with a total of 37765.

I went over one line and it was 2760, which is a number, so I yanked the last elf from the list, **added 2760** to his number and stuck him back in, with a total of 40525.

I went over one line and it was 6702, which is a number, so I yanked the last elf from the list, **added 6702** to his number and stuck him back in, with a total of 47227.

I went over one line and it was 2354, which is a number, so I yanked the last elf from the list, **added 2354** to his number and stuck him back in, with a total of 49581.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1341, which is a number, so I yanked the last elf from the list, **added 1341** to his number and stuck him back in, with a total of 1341.

I went over one line and it was 1489, which is a number, so I yanked the last elf from the list, **added 1489** to his number and stuck him back in, with a total of 2830.

I went over one line and it was 7110, which is a number, so I yanked the last elf from the list, **added 7110** to his number and stuck him back in, with a total of 9940.

I went over one line and it was 2267, which is a number, so I yanked the last elf from the list, **added 2267** to his number and stuck him back in, with a total of 12207.

I went over one line and it was 6809, which is a number, so I yanked the last elf from the list, **added 6809** to his number and stuck him back in, with a total of 19016.

I went over one line and it was 4198, which is a number, so I yanked the last elf from the list, **added 4198** to his number and stuck him back in, with a total of 23214.

I went over one line and it was 1137, which is a number, so I yanked the last elf from the list, **added 1137** to his number and stuck him back in, with a total of 24351.

I went over one line and it was 2526, which is a number, so I yanked the last elf from the list, **added 2526** to his number and stuck him back in, with a total of 26877.

I went over one line and it was 2087, which is a number, so I yanked the last elf from the list, **added 2087** to his number and stuck him back in, with a total of 28964.

I went over one line and it was 3885, which is a number, so I yanked the last elf from the list, **added 3885** to his number and stuck him back in, with a total of 32849.

I went over one line and it was 4952, which is a number, so I yanked the last elf from the list, **added 4952** to his number and stuck him back in, with a total of 37801.

I went over one line and it was 3056, which is a number, so I yanked the last elf from the list, **added 3056** to his number and stuck him back in, with a total of 40857.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6561, which is a number, so I yanked the last elf from the list, **added 6561** to his number and stuck him back in, with a total of 6561.

I went over one line and it was 1313, which is a number, so I yanked the last elf from the list, **added 1313** to his number and stuck him back in, with a total of 7874.

I went over one line and it was 6624, which is a number, so I yanked the last elf from the list, **added 6624** to his number and stuck him back in, with a total of 14498.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 11571, which is a number, so I yanked the last elf from the list, **added 11571** to his number and stuck him back in, with a total of 11571.

I went over one line and it was 3452, which is a number, so I yanked the last elf from the list, **added 3452** to his number and stuck him back in, with a total of 15023.

I went over one line and it was 15300, which is a number, so I yanked the last elf from the list, **added 15300** to his number and stuck him back in, with a total of 30323.

I went over one line and it was 1518, which is a number, so I yanked the last elf from the list, **added 1518** to his number and stuck him back in, with a total of 31841.

I went over one line and it was 14811, which is a number, so I yanked the last elf from the list, **added 14811** to his number and stuck him back in, with a total of 46652.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3421, which is a number, so I yanked the last elf from the list, **added 3421** to his number and stuck him back in, with a total of 3421.

I went over one line and it was 5270, which is a number, so I yanked the last elf from the list, **added 5270** to his number and stuck him back in, with a total of 8691.

I went over one line and it was 1676, which is a number, so I yanked the last elf from the list, **added 1676** to his number and stuck him back in, with a total of 10367.

I went over one line and it was 6712, which is a number, so I yanked the last elf from the list, **added 6712** to his number and stuck him back in, with a total

of 17079.

I went over one line and it was 6231, which is a number, so I yanked the last elf from the list, **added 6231** to his number and stuck him back in, with a total of 23310.

I went over one line and it was 6617, which is a number, so I yanked the last elf from the list, **added 6617** to his number and stuck him back in, with a total of 29927.

I went over one line and it was 6775, which is a number, so I yanked the last elf from the list, **added 6775** to his number and stuck him back in, with a total of 36702.

I went over one line and it was 5428, which is a number, so I yanked the last elf from the list, **added 5428** to his number and stuck him back in, with a total of 42130.

I went over one line and it was 3497, which is a number, so I yanked the last elf from the list, **added 3497** to his number and stuck him back in, with a total of 45627.

I went over one line and it was 5598, which is a number, so I yanked the last elf from the list, **added 5598** to his number and stuck him back in, with a total of 51225.

I went over one line and it was 3723, which is a number, so I yanked the last elf from the list, **added 3723** to his number and stuck him back in, with a total of 54948.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7879, which is a number, so I yanked the last elf from the list, **added 7879** to his number and stuck him back in, with a total of 7879.

I went over one line and it was 7984, which is a number, so I yanked the last elf from the list, **added 7984** to his number and stuck him back in, with a total of 15863.

I went over one line and it was 2678, which is a number, so I yanked the last elf from the list, **added 2678** to his number and stuck him back in, with a total of 18541.

I went over one line and it was 5770, which is a number, so I yanked the last elf from the list, **added 5770** to his number and stuck him back in, with a total

of 24311.

I went over one line and it was 4217, which is a number, so I yanked the last elf from the list, **added 4217** to his number and stuck him back in, with a total of 28528.

I went over one line and it was 5323, which is a number, so I yanked the last elf from the list, **added 5323** to his number and stuck him back in, with a total of 33851.

I went over one line and it was 3708, which is a number, so I yanked the last elf from the list, **added 3708** to his number and stuck him back in, with a total of 37559.

I went over one line and it was 2799, which is a number, so I yanked the last elf from the list, **added 2799** to his number and stuck him back in, with a total of 40358.

I went over one line and it was 5466, which is a number, so I yanked the last elf from the list, **added 5466** to his number and stuck him back in, with a total of 45824.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2895, which is a number, so I yanked the last elf from the list, **added 2895** to his number and stuck him back in, with a total of 2895.

I went over one line and it was 3934, which is a number, so I yanked the last elf from the list, **added 3934** to his number and stuck him back in, with a total of 6829.

I went over one line and it was 4468, which is a number, so I yanked the last elf from the list, **added 4468** to his number and stuck him back in, with a total of 11297.

I went over one line and it was 6864, which is a number, so I yanked the last elf from the list, **added 6864** to his number and stuck him back in, with a total of 18161.

I went over one line and it was 4531, which is a number, so I yanked the last elf from the list, **added 4531** to his number and stuck him back in, with a total of 22692.

I went over one line and it was 5622, which is a number, so I yanked the last elf from the list, **added 5622** to his number and stuck him back in, with a total

of 28314.

I went over one line and it was 3281, which is a number, so I yanked the last elf from the list, **added 3281** to his number and stuck him back in, with a total of 31595.

I went over one line and it was 6518, which is a number, so I yanked the last elf from the list, **added 6518** to his number and stuck him back in, with a total of 38113.

I went over one line and it was 4313, which is a number, so I yanked the last elf from the list, **added 4313** to his number and stuck him back in, with a total of 42426.

I went over one line and it was 5273, which is a number, so I yanked the last elf from the list, **added 5273** to his number and stuck him back in, with a total of 47699.

I went over one line and it was 3945, which is a number, so I yanked the last elf from the list, **added 3945** to his number and stuck him back in, with a total of 51644.

I went over one line and it was 5378, which is a number, so I yanked the last elf from the list, **added 5378** to his number and stuck him back in, with a total of 57022.

I went over one line and it was 2585, which is a number, so I yanked the last elf from the list, **added 2585** to his number and stuck him back in, with a total of 59607.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3486, which is a number, so I yanked the last elf from the list, **added 3486** to his number and stuck him back in, with a total of 3486.

I went over one line and it was 6101, which is a number, so I yanked the last elf from the list, **added 6101** to his number and stuck him back in, with a total of 9587.

I went over one line and it was 1036, which is a number, so I yanked the last elf from the list, **added 1036** to his number and stuck him back in, with a total of 10623.

I went over one line and it was 1079, which is a number, so I yanked the last elf from the list, **added 1079** to his number and stuck him back in, with a total

of 11702.

I went over one line and it was 3380, which is a number, so I yanked the last elf from the list, **added 3380** to his number and stuck him back in, with a total of 15082.

I went over one line and it was 4542, which is a number, so I yanked the last elf from the list, **added 4542** to his number and stuck him back in, with a total of 19624.

I went over one line and it was 3617, which is a number, so I yanked the last elf from the list, **added 3617** to his number and stuck him back in, with a total of 23241.

I went over one line and it was 4279, which is a number, so I yanked the last elf from the list, **added 4279** to his number and stuck him back in, with a total of 27520.

I went over one line and it was 2397, which is a number, so I yanked the last elf from the list, **added 2397** to his number and stuck him back in, with a total of 29917.

I went over one line and it was 2172, which is a number, so I yanked the last elf from the list, **added 2172** to his number and stuck him back in, with a total of 32089.

I went over one line and it was 3711, which is a number, so I yanked the last elf from the list, **added 3711** to his number and stuck him back in, with a total of 35800.

I went over one line and it was 6251, which is a number, so I yanked the last elf from the list, **added 6251** to his number and stuck him back in, with a total of 42051.

I went over one line and it was 1219, which is a number, so I yanked the last elf from the list, **added 1219** to his number and stuck him back in, with a total of 43270.

I went over one line and it was 6320, which is a number, so I yanked the last elf from the list, **added 6320** to his number and stuck him back in, with a total of 49590.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6785, which is a number, so I yanked the last elf from the list, **added 6785** to his number and stuck him back in, with a total

of 6785.

I went over one line and it was 4840, which is a number, so I yanked the last elf from the list, **added 4840** to his number and stuck him back in, with a total of 11625.

I went over one line and it was 4314, which is a number, so I yanked the last elf from the list, **added 4314** to his number and stuck him back in, with a total of 15939.

I went over one line and it was 3647, which is a number, so I yanked the last elf from the list, **added 3647** to his number and stuck him back in, with a total of 19586.

I went over one line and it was 4660, which is a number, so I yanked the last elf from the list, **added 4660** to his number and stuck him back in, with a total of 24246.

I went over one line and it was 5968, which is a number, so I yanked the last elf from the list, **added 5968** to his number and stuck him back in, with a total of 30214.

I went over one line and it was 1932, which is a number, so I yanked the last elf from the list, **added 1932** to his number and stuck him back in, with a total of 32146.

I went over one line and it was 3144, which is a number, so I yanked the last elf from the list, **added 3144** to his number and stuck him back in, with a total of 35290.

I went over one line and it was 2131, which is a number, so I yanked the last elf from the list, **added 2131** to his number and stuck him back in, with a total of 37421.

I went over one line and it was 6556, which is a number, so I yanked the last elf from the list, **added 6556** to his number and stuck him back in, with a total of 43977.

I went over one line and it was 5107, which is a number, so I yanked the last elf from the list, **added 5107** to his number and stuck him back in, with a total of 49084.

I went over one line and it was 2018, which is a number, so I yanked the last elf from the list, **added 2018** to his number and stuck him back in, with a total of 51102.

I went over one line and it was 4441, which is a number, so I yanked the last elf from the list, **added 4441** to his number and stuck him back in, with a total of 55543.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2958, which is a number, so I yanked the last elf from the list, **added 2958** to his number and stuck him back in, with a total of 2958.

I went over one line and it was 2812, which is a number, so I yanked the last elf from the list, **added 2812** to his number and stuck him back in, with a total of 5770.

I went over one line and it was 1812, which is a number, so I yanked the last elf from the list, **added 1812** to his number and stuck him back in, with a total of 7582.

I went over one line and it was 4047, which is a number, so I yanked the last elf from the list, **added 4047** to his number and stuck him back in, with a total of 11629.

I went over one line and it was 4055, which is a number, so I yanked the last elf from the list, **added 4055** to his number and stuck him back in, with a total of 15684.

I went over one line and it was 11311, which is a number, so I yanked the last elf from the list, **added 11311** to his number and stuck him back in, with a total of 26995.

I went over one line and it was 7254, which is a number, so I yanked the last elf from the list, **added 7254** to his number and stuck him back in, with a total of 34249.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2563, which is a number, so I yanked the last elf from the list, **added 2563** to his number and stuck him back in, with a total of 2563.

I went over one line and it was 1559, which is a number, so I yanked the last elf from the list, **added 1559** to his number and stuck him back in, with a total of 4122.

I went over one line and it was 6369, which is a number, so I yanked the last elf from the list, **added 6369** to his number and stuck him back in, with a total

of 10491.

I went over one line and it was 4595, which is a number, so I yanked the last elf from the list, **added 4595** to his number and stuck him back in, with a total of 15086.

I went over one line and it was 3617, which is a number, so I yanked the last elf from the list, **added 3617** to his number and stuck him back in, with a total of 18703.

I went over one line and it was 1979, which is a number, so I yanked the last elf from the list, **added 1979** to his number and stuck him back in, with a total of 20682.

I went over one line and it was 1988, which is a number, so I yanked the last elf from the list, **added 1988** to his number and stuck him back in, with a total of 22670.

I went over one line and it was 1648, which is a number, so I yanked the last elf from the list, **added 1648** to his number and stuck him back in, with a total of 24318.

I went over one line and it was 2520, which is a number, so I yanked the last elf from the list, **added 2520** to his number and stuck him back in, with a total of 26838.

I went over one line and it was 5216, which is a number, so I yanked the last elf from the list, **added 5216** to his number and stuck him back in, with a total of 32054.

I went over one line and it was 6227, which is a number, so I yanked the last elf from the list, **added 6227** to his number and stuck him back in, with a total of 38281.

I went over one line and it was 6239, which is a number, so I yanked the last elf from the list, **added 6239** to his number and stuck him back in, with a total of 44520.

I went over one line and it was 6469, which is a number, so I yanked the last elf from the list, **added 6469** to his number and stuck him back in, with a total of 50989.

I went over one line and it was 3824, which is a number, so I yanked the last elf from the list, **added 3824** to his number and stuck him back in, with a total of 54813.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4417, which is a number, so I yanked the last elf from the list, **added 4417** to his number and stuck him back in, with a total of 4417.

I went over one line and it was 5913, which is a number, so I yanked the last elf from the list, **added 5913** to his number and stuck him back in, with a total of 10330.

I went over one line and it was 2444, which is a number, so I yanked the last elf from the list, **added 2444** to his number and stuck him back in, with a total of 12774.

I went over one line and it was 6808, which is a number, so I yanked the last elf from the list, **added 6808** to his number and stuck him back in, with a total of 19582.

I went over one line and it was 4742, which is a number, so I yanked the last elf from the list, **added 4742** to his number and stuck him back in, with a total of 24324.

I went over one line and it was 2422, which is a number, so I yanked the last elf from the list, **added 2422** to his number and stuck him back in, with a total of 26746.

I went over one line and it was 5153, which is a number, so I yanked the last elf from the list, **added 5153** to his number and stuck him back in, with a total of 31899.

I went over one line and it was 6707, which is a number, so I yanked the last elf from the list, **added 6707** to his number and stuck him back in, with a total of 38606.

I went over one line and it was 6968, which is a number, so I yanked the last elf from the list, **added 6968** to his number and stuck him back in, with a total of 45574.

I went over one line and it was 6663, which is a number, so I yanked the last elf from the list, **added 6663** to his number and stuck him back in, with a total of 52237.

I went over one line and it was 2355, which is a number, so I yanked the last elf from the list, **added 2355** to his number and stuck him back in, with a total of 54592.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9949, which is a number, so I yanked the last elf from the list, **added 9949** to his number and stuck him back in, with a total of 9949.

I went over one line and it was 19801, which is a number, so I yanked the last elf from the list, **added 19801** to his number and stuck him back in, with a total of 29750.

I went over one line and it was 14001, which is a number, so I yanked the last elf from the list, **added 14001** to his number and stuck him back in, with a total of 43751.

I went over one line and it was 15160, which is a number, so I yanked the last elf from the list, **added 15160** to his number and stuck him back in, with a total of 58911.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1166, which is a number, so I yanked the last elf from the list, **added 1166** to his number and stuck him back in, with a total of 1166.

I went over one line and it was 12942, which is a number, so I yanked the last elf from the list, **added 12942** to his number and stuck him back in, with a total of 14108.

I went over one line and it was 15632, which is a number, so I yanked the last elf from the list, **added 15632** to his number and stuck him back in, with a total of 29740.

I went over one line and it was 3266, which is a number, so I yanked the last elf from the list, **added 3266** to his number and stuck him back in, with a total of 33006.

I went over one line and it was 16053, which is a number, so I yanked the last elf from the list, **added 16053** to his number and stuck him back in, with a total of 49059.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7820, which is a number, so I yanked the last elf from the list, **added 7820** to his number and stuck him back in, with a total of 7820.

I went over one line and it was 7480, which is a number, so I yanked the last elf from the list, **added 7480** to his number and stuck him back in, with a total of 15300.

I went over one line and it was 1377, which is a number, so I yanked the last elf from the list, **added 1377** to his number and stuck him back in, with a total of 16677.

I went over one line and it was 4492, which is a number, so I yanked the last elf from the list, **added 4492** to his number and stuck him back in, with a total of 21169.

I went over one line and it was 5371, which is a number, so I yanked the last elf from the list, **added 5371** to his number and stuck him back in, with a total of 26540.

I went over one line and it was 1411, which is a number, so I yanked the last elf from the list, **added 1411** to his number and stuck him back in, with a total of 27951.

I went over one line and it was 2455, which is a number, so I yanked the last elf from the list, **added 2455** to his number and stuck him back in, with a total of 30406.

I went over one line and it was 8883, which is a number, so I yanked the last elf from the list, **added 8883** to his number and stuck him back in, with a total of 39289.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 17669, which is a number, so I yanked the last elf from the list, **added 17669** to his number and stuck him back in, with a total of 17669.

I went over one line and it was 8092, which is a number, so I yanked the last elf from the list, **added 8092** to his number and stuck him back in, with a total of 25761.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8706, which is a number, so I yanked the last elf from the list, **added 8706** to his number and stuck him back in, with a total of 8706.

I went over one line and it was 7270, which is a number, so I yanked the last elf from the list, **added 7270** to his number and stuck him back in, with a total

of 15976.

I went over one line and it was 2362, which is a number, so I yanked the last elf from the list, **added 2362** to his number and stuck him back in, with a total of 18338.

I went over one line and it was 3278, which is a number, so I yanked the last elf from the list, **added 3278** to his number and stuck him back in, with a total of 21616.

I went over one line and it was 7920, which is a number, so I yanked the last elf from the list, **added 7920** to his number and stuck him back in, with a total of 29536.

I went over one line and it was 6014, which is a number, so I yanked the last elf from the list, **added 6014** to his number and stuck him back in, with a total of 35550.

I went over one line and it was 2647, which is a number, so I yanked the last elf from the list, **added 2647** to his number and stuck him back in, with a total of 38197.

I went over one line and it was 1328, which is a number, so I yanked the last elf from the list, **added 1328** to his number and stuck him back in, with a total of 39525.

I went over one line and it was 6135, which is a number, so I yanked the last elf from the list, **added 6135** to his number and stuck him back in, with a total of 45660.

I went over one line and it was 4121, which is a number, so I yanked the last elf from the list, **added 4121** to his number and stuck him back in, with a total of 49781.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1300, which is a number, so I yanked the last elf from the list, **added 1300** to his number and stuck him back in, with a total of 1300.

I went over one line and it was 5806, which is a number, so I yanked the last elf from the list, **added 5806** to his number and stuck him back in, with a total of 7106.

I went over one line and it was 9993, which is a number, so I yanked the last elf from the list, **added 9993** to his number and stuck him back in, with a total

of 17099.

I went over one line and it was 5891, which is a number, so I yanked the last elf from the list, **added 5891** to his number and stuck him back in, with a total of 22990.

I went over one line and it was 1588, which is a number, so I yanked the last elf from the list, **added 1588** to his number and stuck him back in, with a total of 24578.

I went over one line and it was 11239, which is a number, so I yanked the last elf from the list, **added 11239** to his number and stuck him back in, with a total of 35817.

I went over one line and it was 10363, which is a number, so I yanked the last elf from the list, **added 10363** to his number and stuck him back in, with a total of 46180.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6375, which is a number, so I yanked the last elf from the list, **added 6375** to his number and stuck him back in, with a total of 6375.

I went over one line and it was 2494, which is a number, so I yanked the last elf from the list, **added 2494** to his number and stuck him back in, with a total of 8869.

I went over one line and it was 2291, which is a number, so I yanked the last elf from the list, **added 2291** to his number and stuck him back in, with a total of 11160.

I went over one line and it was 5069, which is a number, so I yanked the last elf from the list, **added 5069** to his number and stuck him back in, with a total of 16229.

I went over one line and it was 2878, which is a number, so I yanked the last elf from the list, **added 2878** to his number and stuck him back in, with a total of 19107.

I went over one line and it was 4995, which is a number, so I yanked the last elf from the list, **added 4995** to his number and stuck him back in, with a total of 24102.

I went over one line and it was 3716, which is a number, so I yanked the last elf from the list, **added 3716** to his number and stuck him back in, with a total

of 27818.

I went over one line and it was 7152, which is a number, so I yanked the last elf from the list, **added 7152** to his number and stuck him back in, with a total of 34970.

I went over one line and it was 2761, which is a number, so I yanked the last elf from the list, **added 2761** to his number and stuck him back in, with a total of 37731.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6224, which is a number, so I yanked the last elf from the list, **added 6224** to his number and stuck him back in, with a total of 6224.

I went over one line and it was 1559, which is a number, so I yanked the last elf from the list, **added 1559** to his number and stuck him back in, with a total of 7783.

I went over one line and it was 2918, which is a number, so I yanked the last elf from the list, **added 2918** to his number and stuck him back in, with a total of 10701.

I went over one line and it was 8131, which is a number, so I yanked the last elf from the list, **added 8131** to his number and stuck him back in, with a total of 18832.

I went over one line and it was 7509, which is a number, so I yanked the last elf from the list, **added 7509** to his number and stuck him back in, with a total of 26341.

I went over one line and it was 5718, which is a number, so I yanked the last elf from the list, **added 5718** to his number and stuck him back in, with a total of 32059.

I went over one line and it was 3661, which is a number, so I yanked the last elf from the list, **added 3661** to his number and stuck him back in, with a total of 35720.

I went over one line and it was 3544, which is a number, so I yanked the last elf from the list, **added 3544** to his number and stuck him back in, with a total of 39264.

I went over one line and it was 1823, which is a number, so I yanked the last elf from the list, **added 1823** to his number and stuck him back in, with a total

of 41087.

I went over one line and it was 7656, which is a number, so I yanked the last elf from the list, **added 7656** to his number and stuck him back in, with a total of 48743.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 16526, which is a number, so I yanked the last elf from the list, **added 16526** to his number and stuck him back in, with a total of 16526.

I went over one line and it was 11469, which is a number, so I yanked the last elf from the list, **added 11469** to his number and stuck him back in, with a total of 27995.

I went over one line and it was 1419, which is a number, so I yanked the last elf from the list, **added 1419** to his number and stuck him back in, with a total of 29414.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 53687, which is a number, so I yanked the last elf from the list, **added 53687** to his number and stuck him back in, with a total of 53687.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2857, which is a number, so I yanked the last elf from the list, **added 2857** to his number and stuck him back in, with a total of 2857.

I went over one line and it was 2808, which is a number, so I yanked the last elf from the list, **added 2808** to his number and stuck him back in, with a total of 5665.

I went over one line and it was 4648, which is a number, so I yanked the last elf from the list, **added 4648** to his number and stuck him back in, with a total of 10313.

I went over one line and it was 8455, which is a number, so I yanked the last elf from the list, **added 8455** to his number and stuck him back in, with a total of 18768.

I went over one line and it was 9957, which is a number, so I yanked the last elf from the list, **added 9957** to his number and stuck him back in, with a total

of 28725.

I went over one line and it was 3914, which is a number, so I yanked the last elf from the list, **added 3914** to his number and stuck him back in, with a total of 32639.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7762, which is a number, so I yanked the last elf from the list, **added 7762** to his number and stuck him back in, with a total of 7762.

I went over one line and it was 5994, which is a number, so I yanked the last elf from the list, **added 5994** to his number and stuck him back in, with a total of 13756.

I went over one line and it was 6047, which is a number, so I yanked the last elf from the list, **added 6047** to his number and stuck him back in, with a total of 19803.

I went over one line and it was 8806, which is a number, so I yanked the last elf from the list, **added 8806** to his number and stuck him back in, with a total of 28609.

I went over one line and it was 5176, which is a number, so I yanked the last elf from the list, **added 5176** to his number and stuck him back in, with a total of 33785.

I went over one line and it was 7275, which is a number, so I yanked the last elf from the list, **added 7275** to his number and stuck him back in, with a total of 41060.

I went over one line and it was 4551, which is a number, so I yanked the last elf from the list, **added 4551** to his number and stuck him back in, with a total of 45611.

I went over one line and it was 4066, which is a number, so I yanked the last elf from the list, **added 4066** to his number and stuck him back in, with a total of 49677.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5763, which is a number, so I yanked the last elf from the list, **added 5763** to his number and stuck him back in, with a total of 5763.

I went over one line and it was 3134, which is a number, so I yanked the last elf from the list, **added 3134** to his number and stuck him back in, with a total of 8897.

I went over one line and it was 1326, which is a number, so I yanked the last elf from the list, **added 1326** to his number and stuck him back in, with a total of 10223.

I went over one line and it was 1673, which is a number, so I yanked the last elf from the list, **added 1673** to his number and stuck him back in, with a total of 11896.

I went over one line and it was 1473, which is a number, so I yanked the last elf from the list, **added 1473** to his number and stuck him back in, with a total of 13369.

I went over one line and it was 3568, which is a number, so I yanked the last elf from the list, **added 3568** to his number and stuck him back in, with a total of 16937.

I went over one line and it was 3500, which is a number, so I yanked the last elf from the list, **added 3500** to his number and stuck him back in, with a total of 20437.

I went over one line and it was 3148, which is a number, so I yanked the last elf from the list, **added 3148** to his number and stuck him back in, with a total of 23585.

I went over one line and it was 6480, which is a number, so I yanked the last elf from the list, **added 6480** to his number and stuck him back in, with a total of 30065.

I went over one line and it was 6968, which is a number, so I yanked the last elf from the list, **added 6968** to his number and stuck him back in, with a total of 37033.

I went over one line and it was 5409, which is a number, so I yanked the last elf from the list, **added 5409** to his number and stuck him back in, with a total of 42442.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3964, which is a number, so I yanked the last elf from the list, **added 3964** to his number and stuck him back in, with a total of 3964.

I went over one line and it was 30423, which is a number, so I yanked the last elf from the list, **added 30423** to his number and stuck him back in, with a total of 34387.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4429, which is a number, so I yanked the last elf from the list, **added 4429** to his number and stuck him back in, with a total of 4429.

I went over one line and it was 15272, which is a number, so I yanked the last elf from the list, **added 15272** to his number and stuck him back in, with a total of 19701.

I went over one line and it was 5536, which is a number, so I yanked the last elf from the list, **added 5536** to his number and stuck him back in, with a total of 25237.

I went over one line and it was 17259, which is a number, so I yanked the last elf from the list, **added 17259** to his number and stuck him back in, with a total of 42496.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 12059, which is a number, so I yanked the last elf from the list, **added 12059** to his number and stuck him back in, with a total of 12059.

I went over one line and it was 2888, which is a number, so I yanked the last elf from the list, **added 2888** to his number and stuck him back in, with a total of 14947.

I went over one line and it was 23495, which is a number, so I yanked the last elf from the list, **added 23495** to his number and stuck him back in, with a total of 38442.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6809, which is a number, so I yanked the last elf from the list, **added 6809** to his number and stuck him back in, with a total of 6809.

I went over one line and it was 1963, which is a number, so I yanked the last elf from the list, **added 1963** to his number and stuck him back in, with a total of 8772.

I went over one line and it was 3840, which is a number, so I yanked the last elf from the list, **added 3840** to his number and stuck him back in, with a total of 12612.

I went over one line and it was 3427, which is a number, so I yanked the last elf from the list, **added 3427** to his number and stuck him back in, with a total of 16039.

I went over one line and it was 4613, which is a number, so I yanked the last elf from the list, **added 4613** to his number and stuck him back in, with a total of 20652.

I went over one line and it was 3621, which is a number, so I yanked the last elf from the list, **added 3621** to his number and stuck him back in, with a total of 24273.

I went over one line and it was 6088, which is a number, so I yanked the last elf from the list, **added 6088** to his number and stuck him back in, with a total of 30361.

I went over one line and it was 1689, which is a number, so I yanked the last elf from the list, **added 1689** to his number and stuck him back in, with a total of 32050.

I went over one line and it was 7164, which is a number, so I yanked the last elf from the list, **added 7164** to his number and stuck him back in, with a total of 39214.

I went over one line and it was 1066, which is a number, so I yanked the last elf from the list, **added 1066** to his number and stuck him back in, with a total of 40280.

I went over one line and it was 2414, which is a number, so I yanked the last elf from the list, **added 2414** to his number and stuck him back in, with a total of 42694.

I went over one line and it was 1709, which is a number, so I yanked the last elf from the list, **added 1709** to his number and stuck him back in, with a total of 44403.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3278, which is a number, so I yanked the last elf from the list, **added 3278** to his number and stuck him back in, with a total of 3278.

I went over one line and it was 10853, which is a number, so I yanked the last elf from the list, **added 10853** to his number and stuck him back in, with a total of 14131.

I went over one line and it was 4541, which is a number, so I yanked the last elf from the list, **added 4541** to his number and stuck him back in, with a total of 18672.

I went over one line and it was 8619, which is a number, so I yanked the last elf from the list, **added 8619** to his number and stuck him back in, with a total of 27291.

I went over one line and it was 8481, which is a number, so I yanked the last elf from the list, **added 8481** to his number and stuck him back in, with a total of 35772.

I went over one line and it was 5872, which is a number, so I yanked the last elf from the list, **added 5872** to his number and stuck him back in, with a total of 41644.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 12075, which is a number, so I yanked the last elf from the list, **added 12075** to his number and stuck him back in, with a total of 12075.

I went over one line and it was 14580, which is a number, so I yanked the last elf from the list, **added 14580** to his number and stuck him back in, with a total of 26655.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7950, which is a number, so I yanked the last elf from the list, **added 7950** to his number and stuck him back in, with a total of 7950.

I went over one line and it was 6716, which is a number, so I yanked the last elf from the list, **added 6716** to his number and stuck him back in, with a total of 14666.

I went over one line and it was 2477, which is a number, so I yanked the last elf from the list, **added 2477** to his number and stuck him back in, with a total of 17143.

I went over one line and it was 3646, which is a number, so I yanked the last elf from the list, **added 3646** to his number and stuck him back in, with a total

of 20789.

I went over one line and it was 5451, which is a number, so I yanked the last elf from the list, **added 5451** to his number and stuck him back in, with a total of 26240.

I went over one line and it was 4247, which is a number, so I yanked the last elf from the list, **added 4247** to his number and stuck him back in, with a total of 30487.

I went over one line and it was 5960, which is a number, so I yanked the last elf from the list, **added 5960** to his number and stuck him back in, with a total of 36447.

I went over one line and it was 1059, which is a number, so I yanked the last elf from the list, **added 1059** to his number and stuck him back in, with a total of 37506.

I went over one line and it was 1421, which is a number, so I yanked the last elf from the list, **added 1421** to his number and stuck him back in, with a total of 38927.

I went over one line and it was 5363, which is a number, so I yanked the last elf from the list, **added 5363** to his number and stuck him back in, with a total of 44290.

I went over one line and it was 2927, which is a number, so I yanked the last elf from the list, **added 2927** to his number and stuck him back in, with a total of 47217.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6077, which is a number, so I yanked the last elf from the list, **added 6077** to his number and stuck him back in, with a total of 6077.

I went over one line and it was 3404, which is a number, so I yanked the last elf from the list, **added 3404** to his number and stuck him back in, with a total of 9481.

I went over one line and it was 5644, which is a number, so I yanked the last elf from the list, **added 5644** to his number and stuck him back in, with a total of 15125.

I went over one line and it was 3187, which is a number, so I yanked the last elf from the list, **added 3187** to his number and stuck him back in, with a total

of 18312.

I went over one line and it was 8654, which is a number, so I yanked the last elf from the list, **added 8654** to his number and stuck him back in, with a total of 26966.

I went over one line and it was 2732, which is a number, so I yanked the last elf from the list, **added 2732** to his number and stuck him back in, with a total of 29698.

I went over one line and it was 6190, which is a number, so I yanked the last elf from the list, **added 6190** to his number and stuck him back in, with a total of 35888.

I went over one line and it was 2191, which is a number, so I yanked the last elf from the list, **added 2191** to his number and stuck him back in, with a total of 38079.

I went over one line and it was 3446, which is a number, so I yanked the last elf from the list, **added 3446** to his number and stuck him back in, with a total of 41525.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 13528, which is a number, so I yanked the last elf from the list, **added 13528** to his number and stuck him back in, with a total of 13528.

I went over one line and it was 10960, which is a number, so I yanked the last elf from the list, **added 10960** to his number and stuck him back in, with a total of 24488.

I went over one line and it was 12280, which is a number, so I yanked the last elf from the list, **added 12280** to his number and stuck him back in, with a total of 36768.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 35272, which is a number, so I yanked the last elf from the list, **added 35272** to his number and stuck him back in, with a total of 35272.

I went over one line and it was 23802, which is a number, so I yanked the last elf from the list, **added 23802** to his number and stuck him back in, with a total of 59074.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2178, which is a number, so I yanked the last elf from the list, **added 2178** to his number and stuck him back in, with a total of 2178.

I went over one line and it was 2098, which is a number, so I yanked the last elf from the list, **added 2098** to his number and stuck him back in, with a total of 4276.

I went over one line and it was 2920, which is a number, so I yanked the last elf from the list, **added 2920** to his number and stuck him back in, with a total of 7196.

I went over one line and it was 4938, which is a number, so I yanked the last elf from the list, **added 4938** to his number and stuck him back in, with a total of 12134.

I went over one line and it was 6504, which is a number, so I yanked the last elf from the list, **added 6504** to his number and stuck him back in, with a total of 18638.

I went over one line and it was 1060, which is a number, so I yanked the last elf from the list, **added 1060** to his number and stuck him back in, with a total of 19698.

I went over one line and it was 4419, which is a number, so I yanked the last elf from the list, **added 4419** to his number and stuck him back in, with a total of 24117.

I went over one line and it was 4813, which is a number, so I yanked the last elf from the list, **added 4813** to his number and stuck him back in, with a total of 28930.

I went over one line and it was 5278, which is a number, so I yanked the last elf from the list, **added 5278** to his number and stuck him back in, with a total of 34208.

I went over one line and it was 2795, which is a number, so I yanked the last elf from the list, **added 2795** to his number and stuck him back in, with a total of 37003.

I went over one line and it was 3169, which is a number, so I yanked the last elf from the list, **added 3169** to his number and stuck him back in, with a total of 40172.

I went over one line and it was 3632, which is a number, so I yanked the last elf from the list, **added 3632** to his number and stuck him back in, with a total of 43804.

I went over one line and it was 2780, which is a number, so I yanked the last elf from the list, **added 2780** to his number and stuck him back in, with a total of 46584.

I went over one line and it was 5275, which is a number, so I yanked the last elf from the list, **added 5275** to his number and stuck him back in, with a total of 51859.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4649, which is a number, so I yanked the last elf from the list, **added 4649** to his number and stuck him back in, with a total of 4649.

I went over one line and it was 1930, which is a number, so I yanked the last elf from the list, **added 1930** to his number and stuck him back in, with a total of 6579.

I went over one line and it was 1983, which is a number, so I yanked the last elf from the list, **added 1983** to his number and stuck him back in, with a total of 8562.

I went over one line and it was 3098, which is a number, so I yanked the last elf from the list, **added 3098** to his number and stuck him back in, with a total of 11660.

I went over one line and it was 4015, which is a number, so I yanked the last elf from the list, **added 4015** to his number and stuck him back in, with a total of 15675.

I went over one line and it was 2875, which is a number, so I yanked the last elf from the list, **added 2875** to his number and stuck him back in, with a total of 18550.

I went over one line and it was 2805, which is a number, so I yanked the last elf from the list, **added 2805** to his number and stuck him back in, with a total of 21355.

I went over one line and it was 5216, which is a number, so I yanked the last elf from the list, **added 5216** to his number and stuck him back in, with a total of 26571.

I went over one line and it was 3560, which is a number, so I yanked the last elf from the list, **added 3560** to his number and stuck him back in, with a total of 30131.

I went over one line and it was 5647, which is a number, so I yanked the last elf from the list, **added 5647** to his number and stuck him back in, with a total of 35778.

I went over one line and it was 2568, which is a number, so I yanked the last elf from the list, **added 2568** to his number and stuck him back in, with a total of 38346.

I went over one line and it was 5779, which is a number, so I yanked the last elf from the list, **added 5779** to his number and stuck him back in, with a total of 44125.

I went over one line and it was 6049, which is a number, so I yanked the last elf from the list, **added 6049** to his number and stuck him back in, with a total of 50174.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 27045, which is a number, so I yanked the last elf from the list, **added 27045** to his number and stuck him back in, with a total of 27045.

I went over one line and it was 16939, which is a number, so I yanked the last elf from the list, **added 16939** to his number and stuck him back in, with a total of 43984.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10445, which is a number, so I yanked the last elf from the list, **added 10445** to his number and stuck him back in, with a total of 10445.

I went over one line and it was 10797, which is a number, so I yanked the last elf from the list, **added 10797** to his number and stuck him back in, with a total of 21242.

I went over one line and it was 10108, which is a number, so I yanked the last elf from the list, **added 10108** to his number and stuck him back in, with a total of 31350.

I went over one line and it was 2466, which is a number, so I yanked the last elf from the list, **added 2466** to his number and stuck him back in, with a total

of 33816.

I went over one line and it was 2246, which is a number, so I yanked the last elf from the list, **added 2246** to his number and stuck him back in, with a total of 36062.

I went over one line and it was 5724, which is a number, so I yanked the last elf from the list, **added 5724** to his number and stuck him back in, with a total of 41786.

I went over one line and it was 7331, which is a number, so I yanked the last elf from the list, **added 7331** to his number and stuck him back in, with a total of 49117.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4442, which is a number, so I yanked the last elf from the list, **added 4442** to his number and stuck him back in, with a total of 4442.

I went over one line and it was 7590, which is a number, so I yanked the last elf from the list, **added 7590** to his number and stuck him back in, with a total of 12032.

I went over one line and it was 1569, which is a number, so I yanked the last elf from the list, **added 1569** to his number and stuck him back in, with a total of 13601.

I went over one line and it was 7171, which is a number, so I yanked the last elf from the list, **added 7171** to his number and stuck him back in, with a total of 20772.

I went over one line and it was 2642, which is a number, so I yanked the last elf from the list, **added 2642** to his number and stuck him back in, with a total of 23414.

I went over one line and it was 2514, which is a number, so I yanked the last elf from the list, **added 2514** to his number and stuck him back in, with a total of 25928.

I went over one line and it was 3817, which is a number, so I yanked the last elf from the list, **added 3817** to his number and stuck him back in, with a total of 29745.

I went over one line and it was 9721, which is a number, so I yanked the last elf from the list, **added 9721** to his number and stuck him back in, with a total

of 39466.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8791, which is a number, so I yanked the last elf from the list, **added 8791** to his number and stuck him back in, with a total of 8791.

I went over one line and it was 7994, which is a number, so I yanked the last elf from the list, **added 7994** to his number and stuck him back in, with a total of 16785.

I went over one line and it was 2284, which is a number, so I yanked the last elf from the list, **added 2284** to his number and stuck him back in, with a total of 19069.

I went over one line and it was 2030, which is a number, so I yanked the last elf from the list, **added 2030** to his number and stuck him back in, with a total of 21099.

I went over one line and it was 8332, which is a number, so I yanked the last elf from the list, **added 8332** to his number and stuck him back in, with a total of 29431.

I went over one line and it was 6368, which is a number, so I yanked the last elf from the list, **added 6368** to his number and stuck him back in, with a total of 35799.

I went over one line and it was 4957, which is a number, so I yanked the last elf from the list, **added 4957** to his number and stuck him back in, with a total of 40756.

I went over one line and it was 7785, which is a number, so I yanked the last elf from the list, **added 7785** to his number and stuck him back in, with a total of 48541.

I went over one line and it was 1048, which is a number, so I yanked the last elf from the list, **added 1048** to his number and stuck him back in, with a total of 49589.

I went over one line and it was 4729, which is a number, so I yanked the last elf from the list, **added 4729** to his number and stuck him back in, with a total of 54318.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9724, which is a number, so I yanked the last elf from the list, **added 9724** to his number and stuck him back in, with a total of 9724.

I went over one line and it was 7501, which is a number, so I yanked the last elf from the list, **added 7501** to his number and stuck him back in, with a total of 17225.

I went over one line and it was 5505, which is a number, so I yanked the last elf from the list, **added 5505** to his number and stuck him back in, with a total of 22730.

I went over one line and it was 9879, which is a number, so I yanked the last elf from the list, **added 9879** to his number and stuck him back in, with a total of 32609.

I went over one line and it was 9365, which is a number, so I yanked the last elf from the list, **added 9365** to his number and stuck him back in, with a total of 41974.

I went over one line and it was 9333, which is a number, so I yanked the last elf from the list, **added 9333** to his number and stuck him back in, with a total of 51307.

I went over one line and it was 4116, which is a number, so I yanked the last elf from the list, **added 4116** to his number and stuck him back in, with a total of 55423.

I went over one line and it was 8176, which is a number, so I yanked the last elf from the list, **added 8176** to his number and stuck him back in, with a total of 63599.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9566, which is a number, so I yanked the last elf from the list, **added 9566** to his number and stuck him back in, with a total of 9566.

I went over one line and it was 3327, which is a number, so I yanked the last elf from the list, **added 3327** to his number and stuck him back in, with a total of 12893.

I went over one line and it was 7777, which is a number, so I yanked the last elf from the list, **added 7777** to his number and stuck him back in, with a total of 20670.

I went over one line and it was 11637, which is a number, so I yanked the last elf from the list, **added 11637** to his number and stuck him back in, with a total of 32307.

I went over one line and it was 2558, which is a number, so I yanked the last elf from the list, **added 2558** to his number and stuck him back in, with a total of 34865.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 33212, which is a number, so I yanked the last elf from the list, **added 33212** to his number and stuck him back in, with a total of 33212.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3528, which is a number, so I yanked the last elf from the list, **added 3528** to his number and stuck him back in, with a total of 3528.

I went over one line and it was 6544, which is a number, so I yanked the last elf from the list, **added 6544** to his number and stuck him back in, with a total of 10072.

I went over one line and it was 1465, which is a number, so I yanked the last elf from the list, **added 1465** to his number and stuck him back in, with a total of 11537.

I went over one line and it was 6135, which is a number, so I yanked the last elf from the list, **added 6135** to his number and stuck him back in, with a total of 17672.

I went over one line and it was 6022, which is a number, so I yanked the last elf from the list, **added 6022** to his number and stuck him back in, with a total of 23694.

I went over one line and it was 2179, which is a number, so I yanked the last elf from the list, **added 2179** to his number and stuck him back in, with a total of 25873.

I went over one line and it was 5929, which is a number, so I yanked the last elf from the list, **added 5929** to his number and stuck him back in, with a total of 31802.

I went over one line and it was 3589, which is a number, so I yanked the last elf from the list, **added 3589** to his number and stuck him back in, with a total

of 35391.

I went over one line and it was 5116, which is a number, so I yanked the last elf from the list, **added 5116** to his number and stuck him back in, with a total of 40507.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1295, which is a number, so I yanked the last elf from the list, **added 1295** to his number and stuck him back in, with a total of 1295.

I went over one line and it was 20019, which is a number, so I yanked the last elf from the list, **added 20019** to his number and stuck him back in, with a total of 21314.

I went over one line and it was 23243, which is a number, so I yanked the last elf from the list, **added 23243** to his number and stuck him back in, with a total of 44557.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10512, which is a number, so I yanked the last elf from the list, **added 10512** to his number and stuck him back in, with a total of 10512.

I went over one line and it was 14094, which is a number, so I yanked the last elf from the list, **added 14094** to his number and stuck him back in, with a total of 24606.

I went over one line and it was 8100, which is a number, so I yanked the last elf from the list, **added 8100** to his number and stuck him back in, with a total of 32706.

I went over one line and it was 10837, which is a number, so I yanked the last elf from the list, **added 10837** to his number and stuck him back in, with a total of 43543.

I went over one line and it was 1990, which is a number, so I yanked the last elf from the list, **added 1990** to his number and stuck him back in, with a total of 45533.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8004, which is a number, so I yanked the last elf from the list, **added 8004** to his number and stuck him back in, with a total

of 8004.

I went over one line and it was 5887, which is a number, so I yanked the last elf from the list, **added 5887** to his number and stuck him back in, with a total of 13891.

I went over one line and it was 5776, which is a number, so I yanked the last elf from the list, **added 5776** to his number and stuck him back in, with a total of 19667.

I went over one line and it was 3619, which is a number, so I yanked the last elf from the list, **added 3619** to his number and stuck him back in, with a total of 23286.

I went over one line and it was 5955, which is a number, so I yanked the last elf from the list, **added 5955** to his number and stuck him back in, with a total of 29241.

I went over one line and it was 1823, which is a number, so I yanked the last elf from the list, **added 1823** to his number and stuck him back in, with a total of 31064.

I went over one line and it was 3549, which is a number, so I yanked the last elf from the list, **added 3549** to his number and stuck him back in, with a total of 34613.

I went over one line and it was 1608, which is a number, so I yanked the last elf from the list, **added 1608** to his number and stuck him back in, with a total of 36221.

I went over one line and it was 5574, which is a number, so I yanked the last elf from the list, **added 5574** to his number and stuck him back in, with a total of 41795.

I went over one line and it was 2536, which is a number, so I yanked the last elf from the list, **added 2536** to his number and stuck him back in, with a total of 44331.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 21105, which is a number, so I yanked the last elf from the list, **added 21105** to his number and stuck him back in, with a total of 21105.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1121, which is a number, so I yanked the last elf from the list, **added 1121** to his number and stuck him back in, with a total of 1121.

I went over one line and it was 3374, which is a number, so I yanked the last elf from the list, **added 3374** to his number and stuck him back in, with a total of 4495.

I went over one line and it was 6887, which is a number, so I yanked the last elf from the list, **added 6887** to his number and stuck him back in, with a total of 11382.

I went over one line and it was 7477, which is a number, so I yanked the last elf from the list, **added 7477** to his number and stuck him back in, with a total of 18859.

I went over one line and it was 1559, which is a number, so I yanked the last elf from the list, **added 1559** to his number and stuck him back in, with a total of 20418.

I went over one line and it was 8129, which is a number, so I yanked the last elf from the list, **added 8129** to his number and stuck him back in, with a total of 28547.

I went over one line and it was 2568, which is a number, so I yanked the last elf from the list, **added 2568** to his number and stuck him back in, with a total of 31115.

I went over one line and it was 2267, which is a number, so I yanked the last elf from the list, **added 2267** to his number and stuck him back in, with a total of 33382.

I went over one line and it was 4276, which is a number, so I yanked the last elf from the list, **added 4276** to his number and stuck him back in, with a total of 37658.

I went over one line and it was 5654, which is a number, so I yanked the last elf from the list, **added 5654** to his number and stuck him back in, with a total of 43312.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 13156, which is a number, so I yanked the last elf from the list, **added 13156** to his number and stuck him back in, with a total of 13156.

I went over one line and it was 11437, which is a number, so I yanked the last elf from the list, **added 11437** to his number and stuck him back in, with a total of 24593.

I went over one line and it was 2579, which is a number, so I yanked the last elf from the list, **added 2579** to his number and stuck him back in, with a total of 27172.

I went over one line and it was 13990, which is a number, so I yanked the last elf from the list, **added 13990** to his number and stuck him back in, with a total of 41162.

I went over one line and it was 4857, which is a number, so I yanked the last elf from the list, **added 4857** to his number and stuck him back in, with a total of 46019.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4870, which is a number, so I yanked the last elf from the list, **added 4870** to his number and stuck him back in, with a total of 4870.

I went over one line and it was 5826, which is a number, so I yanked the last elf from the list, **added 5826** to his number and stuck him back in, with a total of 10696.

I went over one line and it was 5900, which is a number, so I yanked the last elf from the list, **added 5900** to his number and stuck him back in, with a total of 16596.

I went over one line and it was 2870, which is a number, so I yanked the last elf from the list, **added 2870** to his number and stuck him back in, with a total of 19466.

I went over one line and it was 4855, which is a number, so I yanked the last elf from the list, **added 4855** to his number and stuck him back in, with a total of 24321.

I went over one line and it was 5032, which is a number, so I yanked the last elf from the list, **added 5032** to his number and stuck him back in, with a total of 29353.

I went over one line and it was 4549, which is a number, so I yanked the last elf from the list, **added 4549** to his number and stuck him back in, with a total of 33902.

I went over one line and it was 3334, which is a number, so I yanked the last elf from the list, **added 3334** to his number and stuck him back in, with a total of 37236.

I went over one line and it was 4392, which is a number, so I yanked the last elf from the list, **added 4392** to his number and stuck him back in, with a total of 41628.

I went over one line and it was 6687, which is a number, so I yanked the last elf from the list, **added 6687** to his number and stuck him back in, with a total of 48315.

I went over one line and it was 1419, which is a number, so I yanked the last elf from the list, **added 1419** to his number and stuck him back in, with a total of 49734.

I went over one line and it was 2931, which is a number, so I yanked the last elf from the list, **added 2931** to his number and stuck him back in, with a total of 52665.

I went over one line and it was 5741, which is a number, so I yanked the last elf from the list, **added 5741** to his number and stuck him back in, with a total of 58406.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3388, which is a number, so I yanked the last elf from the list, **added 3388** to his number and stuck him back in, with a total of 3388.

I went over one line and it was 1796, which is a number, so I yanked the last elf from the list, **added 1796** to his number and stuck him back in, with a total of 5184.

I went over one line and it was 3472, which is a number, so I yanked the last elf from the list, **added 3472** to his number and stuck him back in, with a total of 8656.

I went over one line and it was 1643, which is a number, so I yanked the last elf from the list, **added 1643** to his number and stuck him back in, with a total of 10299.

I went over one line and it was 1332, which is a number, so I yanked the last elf from the list, **added 1332** to his number and stuck him back in, with a total of 11631.

I went over one line and it was 2683, which is a number, so I yanked the last elf from the list, **added 2683** to his number and stuck him back in, with a total of 14314.

I went over one line and it was 4063, which is a number, so I yanked the last elf from the list, **added 4063** to his number and stuck him back in, with a total of 18377.

I went over one line and it was 3896, which is a number, so I yanked the last elf from the list, **added 3896** to his number and stuck him back in, with a total of 22273.

I went over one line and it was 5532, which is a number, so I yanked the last elf from the list, **added 5532** to his number and stuck him back in, with a total of 27805.

I went over one line and it was 4179, which is a number, so I yanked the last elf from the list, **added 4179** to his number and stuck him back in, with a total of 31984.

I went over one line and it was 3293, which is a number, so I yanked the last elf from the list, **added 3293** to his number and stuck him back in, with a total of 35277.

I went over one line and it was 2287, which is a number, so I yanked the last elf from the list, **added 2287** to his number and stuck him back in, with a total of 37564.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3917, which is a number, so I yanked the last elf from the list, **added 3917** to his number and stuck him back in, with a total of 3917.

I went over one line and it was 4479, which is a number, so I yanked the last elf from the list, **added 4479** to his number and stuck him back in, with a total of 8396.

I went over one line and it was 4607, which is a number, so I yanked the last elf from the list, **added 4607** to his number and stuck him back in, with a total of 13003.

I went over one line and it was 3161, which is a number, so I yanked the last elf from the list, **added 3161** to his number and stuck him back in, with a total of 16164.

I went over one line and it was 1568, which is a number, so I yanked the last elf from the list, **added 1568** to his number and stuck him back in, with a total of 17732.

I went over one line and it was 5766, which is a number, so I yanked the last elf from the list, **added 5766** to his number and stuck him back in, with a total of 23498.

I went over one line and it was 1114, which is a number, so I yanked the last elf from the list, **added 1114** to his number and stuck him back in, with a total of 24612.

I went over one line and it was 5629, which is a number, so I yanked the last elf from the list, **added 5629** to his number and stuck him back in, with a total of 30241.

I went over one line and it was 4985, which is a number, so I yanked the last elf from the list, **added 4985** to his number and stuck him back in, with a total of 35226.

I went over one line and it was 4126, which is a number, so I yanked the last elf from the list, **added 4126** to his number and stuck him back in, with a total of 39352.

I went over one line and it was 6032, which is a number, so I yanked the last elf from the list, **added 6032** to his number and stuck him back in, with a total of 45384.

I went over one line and it was 5801, which is a number, so I yanked the last elf from the list, **added 5801** to his number and stuck him back in, with a total of 51185.

I went over one line and it was 4563, which is a number, so I yanked the last elf from the list, **added 4563** to his number and stuck him back in, with a total of 55748.

I went over one line and it was 4102, which is a number, so I yanked the last elf from the list, **added 4102** to his number and stuck him back in, with a total of 59850.

I went over one line and it was 5414, which is a number, so I yanked the last elf from the list, **added 5414** to his number and stuck him back in, with a total of 65264.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1680, which is a number, so I yanked the last elf from the list, **added 1680** to his number and stuck him back in, with a total of 1680.

I went over one line and it was 7168, which is a number, so I yanked the last elf from the list, **added 7168** to his number and stuck him back in, with a total of 8848.

I went over one line and it was 4035, which is a number, so I yanked the last elf from the list, **added 4035** to his number and stuck him back in, with a total of 12883.

I went over one line and it was 7272, which is a number, so I yanked the last elf from the list, **added 7272** to his number and stuck him back in, with a total of 20155.

I went over one line and it was 1069, which is a number, so I yanked the last elf from the list, **added 1069** to his number and stuck him back in, with a total of 21224.

I went over one line and it was 5464, which is a number, so I yanked the last elf from the list, **added 5464** to his number and stuck him back in, with a total of 26688.

I went over one line and it was 3362, which is a number, so I yanked the last elf from the list, **added 3362** to his number and stuck him back in, with a total of 30050.

I went over one line and it was 8014, which is a number, so I yanked the last elf from the list, **added 8014** to his number and stuck him back in, with a total of 38064.

I went over one line and it was 6102, which is a number, so I yanked the last elf from the list, **added 6102** to his number and stuck him back in, with a total of 44166.

I went over one line and it was 3438, which is a number, so I yanked the last elf from the list, **added 3438** to his number and stuck him back in, with a total of 47604.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 12897, which is a number, so I yanked the last elf from the list, **added 12897** to his number and stuck him back in, with a total of 12897.

I went over one line and it was 4134, which is a number, so I yanked the last elf from the list, **added 4134** to his number and stuck him back in, with a total of 17031.

I went over one line and it was 5080, which is a number, so I yanked the last elf from the list, **added 5080** to his number and stuck him back in, with a total of 22111.

I went over one line and it was 5112, which is a number, so I yanked the last elf from the list, **added 5112** to his number and stuck him back in, with a total of 27223.

I went over one line and it was 1382, which is a number, so I yanked the last elf from the list, **added 1382** to his number and stuck him back in, with a total of 28605.

I went over one line and it was 8072, which is a number, so I yanked the last elf from the list, **added 8072** to his number and stuck him back in, with a total of 36677.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6459, which is a number, so I yanked the last elf from the list, **added 6459** to his number and stuck him back in, with a total of 6459.

I went over one line and it was 1052, which is a number, so I yanked the last elf from the list, **added 1052** to his number and stuck him back in, with a total of 7511.

I went over one line and it was 7860, which is a number, so I yanked the last elf from the list, **added 7860** to his number and stuck him back in, with a total of 15371.

I went over one line and it was 6344, which is a number, so I yanked the last elf from the list, **added 6344** to his number and stuck him back in, with a total of 21715.

I went over one line and it was 11275, which is a number, so I yanked the last elf from the list, **added 11275** to his number and stuck him back in, with a total of 32990.

I went over one line and it was 7862, which is a number, so I yanked the last elf from the list, **added 7862** to his number and stuck him back in, with a total of 40852.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7127, which is a number, so I yanked the last elf from the list, **added 7127** to his number and stuck him back in, with a total of 7127.

I went over one line and it was 5350, which is a number, so I yanked the last elf from the list, **added 5350** to his number and stuck him back in, with a total of 12477.

I went over one line and it was 4677, which is a number, so I yanked the last elf from the list, **added 4677** to his number and stuck him back in, with a total of 17154.

I went over one line and it was 6080, which is a number, so I yanked the last elf from the list, **added 6080** to his number and stuck him back in, with a total of 23234.

I went over one line and it was 7389, which is a number, so I yanked the last elf from the list, **added 7389** to his number and stuck him back in, with a total of 30623.

I went over one line and it was 6254, which is a number, so I yanked the last elf from the list, **added 6254** to his number and stuck him back in, with a total of 36877.

I went over one line and it was 1762, which is a number, so I yanked the last elf from the list, **added 1762** to his number and stuck him back in, with a total of 38639.

I went over one line and it was 3744, which is a number, so I yanked the last elf from the list, **added 3744** to his number and stuck him back in, with a total of 42383.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2309, which is a number, so I yanked the last elf from the list, **added 2309** to his number and stuck him back in, with a total of 2309.

I went over one line and it was 9952, which is a number, so I yanked the last elf from the list, **added 9952** to his number and stuck him back in, with a total of 12261.

I went over one line and it was 1649, which is a number, so I yanked the last elf from the list, **added 1649** to his number and stuck him back in, with a total

of 13910.

I went over one line and it was 3813, which is a number, so I yanked the last elf from the list, **added 3813** to his number and stuck him back in, with a total of 17723.

I went over one line and it was 10728, which is a number, so I yanked the last elf from the list, **added 10728** to his number and stuck him back in, with a total of 28451.

I went over one line and it was 9047, which is a number, so I yanked the last elf from the list, **added 9047** to his number and stuck him back in, with a total of 37498.

I went over one line and it was 10324, which is a number, so I yanked the last elf from the list, **added 10324** to his number and stuck him back in, with a total of 47822.

I went over one line and it was 7166, which is a number, so I yanked the last elf from the list, **added 7166** to his number and stuck him back in, with a total of 54988.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10873, which is a number, so I yanked the last elf from the list, **added 10873** to his number and stuck him back in, with a total of 10873.

I went over one line and it was 3572, which is a number, so I yanked the last elf from the list, **added 3572** to his number and stuck him back in, with a total of 14445.

I went over one line and it was 12788, which is a number, so I yanked the last elf from the list, **added 12788** to his number and stuck him back in, with a total of 27233.

I went over one line and it was 4164, which is a number, so I yanked the last elf from the list, **added 4164** to his number and stuck him back in, with a total of 31397.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4454, which is a number, so I yanked the last elf from the list, **added 4454** to his number and stuck him back in, with a total of 4454.

I went over one line and it was 4712, which is a number, so I yanked the last elf from the list, **added 4712** to his number and stuck him back in, with a total of 9166.

I went over one line and it was 3474, which is a number, so I yanked the last elf from the list, **added 3474** to his number and stuck him back in, with a total of 12640.

I went over one line and it was 2168, which is a number, so I yanked the last elf from the list, **added 2168** to his number and stuck him back in, with a total of 14808.

I went over one line and it was 5914, which is a number, so I yanked the last elf from the list, **added 5914** to his number and stuck him back in, with a total of 20722.

I went over one line and it was 2979, which is a number, so I yanked the last elf from the list, **added 2979** to his number and stuck him back in, with a total of 23701.

I went over one line and it was 4481, which is a number, so I yanked the last elf from the list, **added 4481** to his number and stuck him back in, with a total of 28182.

I went over one line and it was 3906, which is a number, so I yanked the last elf from the list, **added 3906** to his number and stuck him back in, with a total of 32088.

I went over one line and it was 1923, which is a number, so I yanked the last elf from the list, **added 1923** to his number and stuck him back in, with a total of 34011.

I went over one line and it was 3666, which is a number, so I yanked the last elf from the list, **added 3666** to his number and stuck him back in, with a total of 37677.

I went over one line and it was 1563, which is a number, so I yanked the last elf from the list, **added 1563** to his number and stuck him back in, with a total of 39240.

I went over one line and it was 4974, which is a number, so I yanked the last elf from the list, **added 4974** to his number and stuck him back in, with a total of 44214.

I went over one line and it was 2768, which is a number, so I yanked the last elf from the list, **added 2768** to his number and stuck him back in, with a total

of 46982.

I went over one line and it was 3148, which is a number, so I yanked the last elf from the list, **added 3148** to his number and stuck him back in, with a total of 50130.

I went over one line and it was 4075, which is a number, so I yanked the last elf from the list, **added 4075** to his number and stuck him back in, with a total of 54205.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8824, which is a number, so I yanked the last elf from the list, **added 8824** to his number and stuck him back in, with a total of 8824.

I went over one line and it was 14894, which is a number, so I yanked the last elf from the list, **added 14894** to his number and stuck him back in, with a total of 23718.

I went over one line and it was 10182, which is a number, so I yanked the last elf from the list, **added 10182** to his number and stuck him back in, with a total of 33900.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 27925, which is a number, so I yanked the last elf from the list, **added 27925** to his number and stuck him back in, with a total of 27925.

I went over one line and it was 27484, which is a number, so I yanked the last elf from the list, **added 27484** to his number and stuck him back in, with a total of 55409.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10626, which is a number, so I yanked the last elf from the list, **added 10626** to his number and stuck him back in, with a total of 10626.

I went over one line and it was 19944, which is a number, so I yanked the last elf from the list, **added 19944** to his number and stuck him back in, with a total of 30570.

I went over one line and it was 5603, which is a number, so I yanked the last elf from the list, **added 5603** to his number and stuck him back in, with a total

of 36173.

I went over one line and it was 2536, which is a number, so I yanked the last elf from the list, **added 2536** to his number and stuck him back in, with a total of 38709.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6931, which is a number, so I yanked the last elf from the list, **added 6931** to his number and stuck him back in, with a total of 6931.

I went over one line and it was 14574, which is a number, so I yanked the last elf from the list, **added 14574** to his number and stuck him back in, with a total of 21505.

I went over one line and it was 6857, which is a number, so I yanked the last elf from the list, **added 6857** to his number and stuck him back in, with a total of 28362.

I went over one line and it was 2887, which is a number, so I yanked the last elf from the list, **added 2887** to his number and stuck him back in, with a total of 31249.

I went over one line and it was 4086, which is a number, so I yanked the last elf from the list, **added 4086** to his number and stuck him back in, with a total of 35335.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 18693, which is a number, so I yanked the last elf from the list, **added 18693** to his number and stuck him back in, with a total of 18693.

I went over one line and it was 15550, which is a number, so I yanked the last elf from the list, **added 15550** to his number and stuck him back in, with a total of 34243.

I went over one line and it was 9475, which is a number, so I yanked the last elf from the list, **added 9475** to his number and stuck him back in, with a total of 43718.

I went over one line and it was 16434, which is a number, so I yanked the last elf from the list, **added 16434** to his number and stuck him back in, with a total of 60152.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6759, which is a number, so I yanked the last elf from the list, **added 6759** to his number and stuck him back in, with a total of 6759.

I went over one line and it was 6343, which is a number, so I yanked the last elf from the list, **added 6343** to his number and stuck him back in, with a total of 13102.

I went over one line and it was 4255, which is a number, so I yanked the last elf from the list, **added 4255** to his number and stuck him back in, with a total of 17357.

I went over one line and it was 3838, which is a number, so I yanked the last elf from the list, **added 3838** to his number and stuck him back in, with a total of 21195.

I went over one line and it was 6209, which is a number, so I yanked the last elf from the list, **added 6209** to his number and stuck him back in, with a total of 27404.

I went over one line and it was 3314, which is a number, so I yanked the last elf from the list, **added 3314** to his number and stuck him back in, with a total of 30718.

I went over one line and it was 2508, which is a number, so I yanked the last elf from the list, **added 2508** to his number and stuck him back in, with a total of 33226.

I went over one line and it was 3168, which is a number, so I yanked the last elf from the list, **added 3168** to his number and stuck him back in, with a total of 36394.

I went over one line and it was 4738, which is a number, so I yanked the last elf from the list, **added 4738** to his number and stuck him back in, with a total of 41132.

I went over one line and it was 4613, which is a number, so I yanked the last elf from the list, **added 4613** to his number and stuck him back in, with a total of 45745.

I went over one line and it was 1326, which is a number, so I yanked the last elf from the list, **added 1326** to his number and stuck him back in, with a total of 47071.

I went over one line and it was 5034, which is a number, so I yanked the last elf from the list, **added 5034** to his number and stuck him back in, with a total of 52105.

I went over one line and it was 1437, which is a number, so I yanked the last elf from the list, **added 1437** to his number and stuck him back in, with a total of 53542.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1822, which is a number, so I yanked the last elf from the list, **added 1822** to his number and stuck him back in, with a total of 1822.

I went over one line and it was 10438, which is a number, so I yanked the last elf from the list, **added 10438** to his number and stuck him back in, with a total of 12260.

I went over one line and it was 9137, which is a number, so I yanked the last elf from the list, **added 9137** to his number and stuck him back in, with a total of 21397.

I went over one line and it was 7846, which is a number, so I yanked the last elf from the list, **added 7846** to his number and stuck him back in, with a total of 29243.

I went over one line and it was 8451, which is a number, so I yanked the last elf from the list, **added 8451** to his number and stuck him back in, with a total of 37694.

I went over one line and it was 9397, which is a number, so I yanked the last elf from the list, **added 9397** to his number and stuck him back in, with a total of 47091.

I went over one line and it was 7729, which is a number, so I yanked the last elf from the list, **added 7729** to his number and stuck him back in, with a total of 54820.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2326, which is a number, so I yanked the last elf from the list, **added 2326** to his number and stuck him back in, with a total of 2326.

I went over one line and it was 3628, which is a number, so I yanked the last elf from the list, **added 3628** to his number and stuck him back in, with a total

of 5954.

I went over one line and it was 5120, which is a number, so I yanked the last elf from the list, **added 5120** to his number and stuck him back in, with a total of 11074.

I went over one line and it was 2662, which is a number, so I yanked the last elf from the list, **added 2662** to his number and stuck him back in, with a total of 13736.

I went over one line and it was 3814, which is a number, so I yanked the last elf from the list, **added 3814** to his number and stuck him back in, with a total of 17550.

I went over one line and it was 3761, which is a number, so I yanked the last elf from the list, **added 3761** to his number and stuck him back in, with a total of 21311.

I went over one line and it was 1462, which is a number, so I yanked the last elf from the list, **added 1462** to his number and stuck him back in, with a total of 22773.

I went over one line and it was 1878, which is a number, so I yanked the last elf from the list, **added 1878** to his number and stuck him back in, with a total of 24651.

I went over one line and it was 6003, which is a number, so I yanked the last elf from the list, **added 6003** to his number and stuck him back in, with a total of 30654.

I went over one line and it was 2927, which is a number, so I yanked the last elf from the list, **added 2927** to his number and stuck him back in, with a total of 33581.

I went over one line and it was 1345, which is a number, so I yanked the last elf from the list, **added 1345** to his number and stuck him back in, with a total of 34926.

I went over one line and it was 2849, which is a number, so I yanked the last elf from the list, **added 2849** to his number and stuck him back in, with a total of 37775.

I went over one line and it was 6064, which is a number, so I yanked the last elf from the list, **added 6064** to his number and stuck him back in, with a total of 43839.

I went over one line and it was 5540, which is a number, so I yanked the last elf from the list, **added 5540** to his number and stuck him back in, with a total of 49379.

I went over one line and it was 2435, which is a number, so I yanked the last elf from the list, **added 2435** to his number and stuck him back in, with a total of 51814.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3680, which is a number, so I yanked the last elf from the list, **added 3680** to his number and stuck him back in, with a total of 3680.

I went over one line and it was 3813, which is a number, so I yanked the last elf from the list, **added 3813** to his number and stuck him back in, with a total of 7493.

I went over one line and it was 4824, which is a number, so I yanked the last elf from the list, **added 4824** to his number and stuck him back in, with a total of 12317.

I went over one line and it was 5499, which is a number, so I yanked the last elf from the list, **added 5499** to his number and stuck him back in, with a total of 17816.

I went over one line and it was 9998, which is a number, so I yanked the last elf from the list, **added 9998** to his number and stuck him back in, with a total of 27814.

I went over one line and it was 2233, which is a number, so I yanked the last elf from the list, **added 2233** to his number and stuck him back in, with a total of 30047.

I went over one line and it was 9012, which is a number, so I yanked the last elf from the list, **added 9012** to his number and stuck him back in, with a total of 39059.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 30259, which is a number, so I yanked the last elf from the list, **added 30259** to his number and stuck him back in, with a total of 30259.

I went over one line and it was 24718, which is a number, so I yanked the last elf from the list, **added 24718** to his number and stuck him back in, with

a total of 54977.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10326, which is a number, so I yanked the last elf from the list, **added 10326** to his number and stuck him back in, with a total of 10326.

I went over one line and it was 6960, which is a number, so I yanked the last elf from the list, **added 6960** to his number and stuck him back in, with a total of 17286.

I went over one line and it was 7198, which is a number, so I yanked the last elf from the list, **added 7198** to his number and stuck him back in, with a total of 24484.

I went over one line and it was 14566, which is a number, so I yanked the last elf from the list, **added 14566** to his number and stuck him back in, with a total of 39050.

I went over one line and it was 13123, which is a number, so I yanked the last elf from the list, **added 13123** to his number and stuck him back in, with a total of 52173.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6018, which is a number, so I yanked the last elf from the list, **added 6018** to his number and stuck him back in, with a total of 6018.

I went over one line and it was 6875, which is a number, so I yanked the last elf from the list, **added 6875** to his number and stuck him back in, with a total of 12893.

I went over one line and it was 5608, which is a number, so I yanked the last elf from the list, **added 5608** to his number and stuck him back in, with a total of 18501.

I went over one line and it was 1167, which is a number, so I yanked the last elf from the list, **added 1167** to his number and stuck him back in, with a total of 19668.

I went over one line and it was 6331, which is a number, so I yanked the last elf from the list, **added 6331** to his number and stuck him back in, with a total of 25999.

I went over one line and it was 5020, which is a number, so I yanked the last elf from the list, **added 5020** to his number and stuck him back in, with a total of 31019.

I went over one line and it was 3796, which is a number, so I yanked the last elf from the list, **added 3796** to his number and stuck him back in, with a total of 34815.

I went over one line and it was 4878, which is a number, so I yanked the last elf from the list, **added 4878** to his number and stuck him back in, with a total of 39693.

I went over one line and it was 6180, which is a number, so I yanked the last elf from the list, **added 6180** to his number and stuck him back in, with a total of 45873.

I went over one line and it was 2043, which is a number, so I yanked the last elf from the list, **added 2043** to his number and stuck him back in, with a total of 47916.

I went over one line and it was 2419, which is a number, so I yanked the last elf from the list, **added 2419** to his number and stuck him back in, with a total of 50335.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6676, which is a number, so I yanked the last elf from the list, **added 6676** to his number and stuck him back in, with a total of 6676.

I went over one line and it was 7795, which is a number, so I yanked the last elf from the list, **added 7795** to his number and stuck him back in, with a total of 14471.

I went over one line and it was 6677, which is a number, so I yanked the last elf from the list, **added 6677** to his number and stuck him back in, with a total of 21148.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3188, which is a number, so I yanked the last elf from the list, **added 3188** to his number and stuck him back in, with a total of 3188.

I went over one line and it was 4992, which is a number, so I yanked the last elf from the list, **added 4992** to his number and stuck him back in, with a total

of 8180.

I went over one line and it was 3958, which is a number, so I yanked the last elf from the list, **added 3958** to his number and stuck him back in, with a total of 12138.

I went over one line and it was 1837, which is a number, so I yanked the last elf from the list, **added 1837** to his number and stuck him back in, with a total of 13975.

I went over one line and it was 3146, which is a number, so I yanked the last elf from the list, **added 3146** to his number and stuck him back in, with a total of 17121.

I went over one line and it was 4012, which is a number, so I yanked the last elf from the list, **added 4012** to his number and stuck him back in, with a total of 21133.

I went over one line and it was 2109, which is a number, so I yanked the last elf from the list, **added 2109** to his number and stuck him back in, with a total of 23242.

I went over one line and it was 4262, which is a number, so I yanked the last elf from the list, **added 4262** to his number and stuck him back in, with a total of 27504.

I went over one line and it was 6831, which is a number, so I yanked the last elf from the list, **added 6831** to his number and stuck him back in, with a total of 34335.

I went over one line and it was 2423, which is a number, so I yanked the last elf from the list, **added 2423** to his number and stuck him back in, with a total of 36758.

I went over one line and it was 1716, which is a number, so I yanked the last elf from the list, **added 1716** to his number and stuck him back in, with a total of 38474.

I went over one line and it was 5367, which is a number, so I yanked the last elf from the list, **added 5367** to his number and stuck him back in, with a total of 43841.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5837, which is a number, so I yanked the last elf from the list, **added 5837** to his number and stuck him back in, with a total

of 5837.

I went over one line and it was 1616, which is a number, so I yanked the last elf from the list, **added 1616** to his number and stuck him back in, with a total of 7453.

I went over one line and it was 6477, which is a number, so I yanked the last elf from the list, **added 6477** to his number and stuck him back in, with a total of 13930.

I went over one line and it was 5255, which is a number, so I yanked the last elf from the list, **added 5255** to his number and stuck him back in, with a total of 19185.

I went over one line and it was 1808, which is a number, so I yanked the last elf from the list, **added 1808** to his number and stuck him back in, with a total of 20993.

I went over one line and it was 5473, which is a number, so I yanked the last elf from the list, **added 5473** to his number and stuck him back in, with a total of 26466.

I went over one line and it was 5978, which is a number, so I yanked the last elf from the list, **added 5978** to his number and stuck him back in, with a total of 32444.

I went over one line and it was 5139, which is a number, so I yanked the last elf from the list, **added 5139** to his number and stuck him back in, with a total of 37583.

I went over one line and it was 4689, which is a number, so I yanked the last elf from the list, **added 4689** to his number and stuck him back in, with a total of 42272.

I went over one line and it was 5701, which is a number, so I yanked the last elf from the list, **added 5701** to his number and stuck him back in, with a total of 47973.

I went over one line and it was 3022, which is a number, so I yanked the last elf from the list, **added 3022** to his number and stuck him back in, with a total of 50995.

I went over one line and it was 2911, which is a number, so I yanked the last elf from the list, **added 2911** to his number and stuck him back in, with a total of 53906.

I went over one line and it was 5043, which is a number, so I yanked the last elf from the list, **added 5043** to his number and stuck him back in, with a total of 58949.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9217, which is a number, so I yanked the last elf from the list, **added 9217** to his number and stuck him back in, with a total of 9217.

I went over one line and it was 16226, which is a number, so I yanked the last elf from the list, **added 16226** to his number and stuck him back in, with a total of 25443.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1105, which is a number, so I yanked the last elf from the list, **added 1105** to his number and stuck him back in, with a total of 1105.

I went over one line and it was 6108, which is a number, so I yanked the last elf from the list, **added 6108** to his number and stuck him back in, with a total of 7213.

I went over one line and it was 3893, which is a number, so I yanked the last elf from the list, **added 3893** to his number and stuck him back in, with a total of 11106.

I went over one line and it was 5617, which is a number, so I yanked the last elf from the list, **added 5617** to his number and stuck him back in, with a total of 16723.

I went over one line and it was 1700, which is a number, so I yanked the last elf from the list, **added 1700** to his number and stuck him back in, with a total of 18423.

I went over one line and it was 4762, which is a number, so I yanked the last elf from the list, **added 4762** to his number and stuck him back in, with a total of 23185.

I went over one line and it was 2230, which is a number, so I yanked the last elf from the list, **added 2230** to his number and stuck him back in, with a total of 25415.

I went over one line and it was 4590, which is a number, so I yanked the last elf from the list, **added 4590** to his number and stuck him back in, with a total

of 30005.

I went over one line and it was 6602, which is a number, so I yanked the last elf from the list, **added 6602** to his number and stuck him back in, with a total of 36607.

I went over one line and it was 5875, which is a number, so I yanked the last elf from the list, **added 5875** to his number and stuck him back in, with a total of 42482.

I went over one line and it was 4648, which is a number, so I yanked the last elf from the list, **added 4648** to his number and stuck him back in, with a total of 47130.

I went over one line and it was 2742, which is a number, so I yanked the last elf from the list, **added 2742** to his number and stuck him back in, with a total of 49872.

I went over one line and it was 1623, which is a number, so I yanked the last elf from the list, **added 1623** to his number and stuck him back in, with a total of 51495.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7941, which is a number, so I yanked the last elf from the list, **added 7941** to his number and stuck him back in, with a total of 7941.

I went over one line and it was 5740, which is a number, so I yanked the last elf from the list, **added 5740** to his number and stuck him back in, with a total of 13681.

I went over one line and it was 6709, which is a number, so I yanked the last elf from the list, **added 6709** to his number and stuck him back in, with a total of 20390.

I went over one line and it was 4488, which is a number, so I yanked the last elf from the list, **added 4488** to his number and stuck him back in, with a total of 24878.

I went over one line and it was 7148, which is a number, so I yanked the last elf from the list, **added 7148** to his number and stuck him back in, with a total of 32026.

I went over one line and it was 6554, which is a number, so I yanked the last elf from the list, **added 6554** to his number and stuck him back in, with a total

of 38580.

I went over one line and it was 4125, which is a number, so I yanked the last elf from the list, **added 4125** to his number and stuck him back in, with a total of 42705.

I went over one line and it was 5040, which is a number, so I yanked the last elf from the list, **added 5040** to his number and stuck him back in, with a total of 47745.

I went over one line and it was 8310, which is a number, so I yanked the last elf from the list, **added 8310** to his number and stuck him back in, with a total of 56055.

I went over one line and it was 5795, which is a number, so I yanked the last elf from the list, **added 5795** to his number and stuck him back in, with a total of 61850.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4126, which is a number, so I yanked the last elf from the list, **added 4126** to his number and stuck him back in, with a total of 4126.

I went over one line and it was 2456, which is a number, so I yanked the last elf from the list, **added 2456** to his number and stuck him back in, with a total of 6582.

I went over one line and it was 6279, which is a number, so I yanked the last elf from the list, **added 6279** to his number and stuck him back in, with a total of 12861.

I went over one line and it was 2323, which is a number, so I yanked the last elf from the list, **added 2323** to his number and stuck him back in, with a total of 15184.

I went over one line and it was 4295, which is a number, so I yanked the last elf from the list, **added 4295** to his number and stuck him back in, with a total of 19479.

I went over one line and it was 2384, which is a number, so I yanked the last elf from the list, **added 2384** to his number and stuck him back in, with a total of 21863.

I went over one line and it was 5372, which is a number, so I yanked the last elf from the list, **added 5372** to his number and stuck him back in, with a total

of 27235.

I went over one line and it was 4833, which is a number, so I yanked the last elf from the list, **added 4833** to his number and stuck him back in, with a total of 32068.

I went over one line and it was 3379, which is a number, so I yanked the last elf from the list, **added 3379** to his number and stuck him back in, with a total of 35447.

I went over one line and it was 4984, which is a number, so I yanked the last elf from the list, **added 4984** to his number and stuck him back in, with a total of 40431.

I went over one line and it was 3094, which is a number, so I yanked the last elf from the list, **added 3094** to his number and stuck him back in, with a total of 43525.

I went over one line and it was 3085, which is a number, so I yanked the last elf from the list, **added 3085** to his number and stuck him back in, with a total of 46610.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4134, which is a number, so I yanked the last elf from the list, **added 4134** to his number and stuck him back in, with a total of 4134.

I went over one line and it was 7845, which is a number, so I yanked the last elf from the list, **added 7845** to his number and stuck him back in, with a total of 11979.

I went over one line and it was 5029, which is a number, so I yanked the last elf from the list, **added 5029** to his number and stuck him back in, with a total of 17008.

I went over one line and it was 9865, which is a number, so I yanked the last elf from the list, **added 9865** to his number and stuck him back in, with a total of 26873.

I went over one line and it was 8431, which is a number, so I yanked the last elf from the list, **added 8431** to his number and stuck him back in, with a total of 35304.

I went over one line and it was 7084, which is a number, so I yanked the last elf from the list, **added 7084** to his number and stuck him back in, with a total

of 42388.

I went over one line and it was 4411, which is a number, so I yanked the last elf from the list, **added 4411** to his number and stuck him back in, with a total of 46799.

I went over one line and it was 7765, which is a number, so I yanked the last elf from the list, **added 7765** to his number and stuck him back in, with a total of 54564.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9573, which is a number, so I yanked the last elf from the list, **added 9573** to his number and stuck him back in, with a total of 9573.

I went over one line and it was 10031, which is a number, so I yanked the last elf from the list, **added 10031** to his number and stuck him back in, with a total of 19604.

I went over one line and it was 11504, which is a number, so I yanked the last elf from the list, **added 11504** to his number and stuck him back in, with a total of 31108.

I went over one line and it was 18955, which is a number, so I yanked the last elf from the list, **added 18955** to his number and stuck him back in, with a total of 50063.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 65758, which is a number, so I yanked the last elf from the list, **added 65758** to his number and stuck him back in, with a total of 65758.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10933, which is a number, so I yanked the last elf from the list, **added 10933** to his number and stuck him back in, with a total of 10933.

I went over one line and it was 23224, which is a number, so I yanked the last elf from the list, **added 23224** to his number and stuck him back in, with a total of 34157.

I went over one line and it was 9234, which is a number, so I yanked the last elf from the list, **added 9234** to his number and stuck him back in, with a total

of 43391.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9163, which is a number, so I yanked the last elf from the list, **added 9163** to his number and stuck him back in, with a total of 9163.

I went over one line and it was 8764, which is a number, so I yanked the last elf from the list, **added 8764** to his number and stuck him back in, with a total of 17927.

I went over one line and it was 4788, which is a number, so I yanked the last elf from the list, **added 4788** to his number and stuck him back in, with a total of 22715.

I went over one line and it was 8189, which is a number, so I yanked the last elf from the list, **added 8189** to his number and stuck him back in, with a total of 30904.

I went over one line and it was 11424, which is a number, so I yanked the last elf from the list, **added 11424** to his number and stuck him back in, with a total of 42328.

I went over one line and it was 1888, which is a number, so I yanked the last elf from the list, **added 1888** to his number and stuck him back in, with a total of 44216.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7361, which is a number, so I yanked the last elf from the list, **added 7361** to his number and stuck him back in, with a total of 7361.

I went over one line and it was 7393, which is a number, so I yanked the last elf from the list, **added 7393** to his number and stuck him back in, with a total of 14754.

I went over one line and it was 11150, which is a number, so I yanked the last elf from the list, **added 11150** to his number and stuck him back in, with a total of 25904.

I went over one line and it was 11767, which is a number, so I yanked the last elf from the list, **added 11767** to his number and stuck him back in, with a total of 37671.

I went over one line and it was 10104, which is a number, so I yanked the last elf from the list, **added 10104** to his number and stuck him back in, with a total of 47775.

I went over one line and it was 11200, which is a number, so I yanked the last elf from the list, **added 11200** to his number and stuck him back in, with a total of 58975.

I went over one line and it was 5473, which is a number, so I yanked the last elf from the list, **added 5473** to his number and stuck him back in, with a total of 64448.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1033, which is a number, so I yanked the last elf from the list, **added 1033** to his number and stuck him back in, with a total of 1033.

I went over one line and it was 5952, which is a number, so I yanked the last elf from the list, **added 5952** to his number and stuck him back in, with a total of 6985.

I went over one line and it was 4635, which is a number, so I yanked the last elf from the list, **added 4635** to his number and stuck him back in, with a total of 11620.

I went over one line and it was 3781, which is a number, so I yanked the last elf from the list, **added 3781** to his number and stuck him back in, with a total of 15401.

I went over one line and it was 5088, which is a number, so I yanked the last elf from the list, **added 5088** to his number and stuck him back in, with a total of 20489.

I went over one line and it was 3479, which is a number, so I yanked the last elf from the list, **added 3479** to his number and stuck him back in, with a total of 23968.

I went over one line and it was 4403, which is a number, so I yanked the last elf from the list, **added 4403** to his number and stuck him back in, with a total of 28371.

I went over one line and it was 6264, which is a number, so I yanked the last elf from the list, **added 6264** to his number and stuck him back in, with a total of 34635.

I went over one line and it was 2437, which is a number, so I yanked the last elf from the list, **added 2437** to his number and stuck him back in, with a total of 37072.

I went over one line and it was 1437, which is a number, so I yanked the last elf from the list, **added 1437** to his number and stuck him back in, with a total of 38509.

I went over one line and it was 6677, which is a number, so I yanked the last elf from the list, **added 6677** to his number and stuck him back in, with a total of 45186.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 15877, which is a number, so I yanked the last elf from the list, **added 15877** to his number and stuck him back in, with a total of 15877.

I went over one line and it was 15511, which is a number, so I yanked the last elf from the list, **added 15511** to his number and stuck him back in, with a total of 31388.

I went over one line and it was 7676, which is a number, so I yanked the last elf from the list, **added 7676** to his number and stuck him back in, with a total of 39064.

I went over one line and it was 11138, which is a number, so I yanked the last elf from the list, **added 11138** to his number and stuck him back in, with a total of 50202.

I went over one line and it was 14878, which is a number, so I yanked the last elf from the list, **added 14878** to his number and stuck him back in, with a total of 65080.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3345, which is a number, so I yanked the last elf from the list, **added 3345** to his number and stuck him back in, with a total of 3345.

I went over one line and it was 2250, which is a number, so I yanked the last elf from the list, **added 2250** to his number and stuck him back in, with a total of 5595.

I went over one line and it was 4913, which is a number, so I yanked the last elf from the list, **added 4913** to his number and stuck him back in, with a total

of 10508.

I went over one line and it was 5217, which is a number, so I yanked the last elf from the list, **added 5217** to his number and stuck him back in, with a total of 15725.

I went over one line and it was 1510, which is a number, so I yanked the last elf from the list, **added 1510** to his number and stuck him back in, with a total of 17235.

I went over one line and it was 4379, which is a number, so I yanked the last elf from the list, **added 4379** to his number and stuck him back in, with a total of 21614.

I went over one line and it was 4549, which is a number, so I yanked the last elf from the list, **added 4549** to his number and stuck him back in, with a total of 26163.

I went over one line and it was 1731, which is a number, so I yanked the last elf from the list, **added 1731** to his number and stuck him back in, with a total of 27894.

I went over one line and it was 4827, which is a number, so I yanked the last elf from the list, **added 4827** to his number and stuck him back in, with a total of 32721.

I went over one line and it was 2068, which is a number, so I yanked the last elf from the list, **added 2068** to his number and stuck him back in, with a total of 34789.

I went over one line and it was 2835, which is a number, so I yanked the last elf from the list, **added 2835** to his number and stuck him back in, with a total of 37624.

I went over one line and it was 5467, which is a number, so I yanked the last elf from the list, **added 5467** to his number and stuck him back in, with a total of 43091.

I went over one line and it was 1749, which is a number, so I yanked the last elf from the list, **added 1749** to his number and stuck him back in, with a total of 44840.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4448, which is a number, so I yanked the last elf from the list, **added 4448** to his number and stuck him back in, with a total

of 4448.

I went over one line and it was 3042, which is a number, so I yanked the last elf from the list, **added 3042** to his number and stuck him back in, with a total of 7490.

I went over one line and it was 5305, which is a number, so I yanked the last elf from the list, **added 5305** to his number and stuck him back in, with a total of 12795.

I went over one line and it was 1516, which is a number, so I yanked the last elf from the list, **added 1516** to his number and stuck him back in, with a total of 14311.

I went over one line and it was 4014, which is a number, so I yanked the last elf from the list, **added 4014** to his number and stuck him back in, with a total of 18325.

I went over one line and it was 1408, which is a number, so I yanked the last elf from the list, **added 1408** to his number and stuck him back in, with a total of 19733.

I went over one line and it was 6255, which is a number, so I yanked the last elf from the list, **added 6255** to his number and stuck him back in, with a total of 25988.

I went over one line and it was 1208, which is a number, so I yanked the last elf from the list, **added 1208** to his number and stuck him back in, with a total of 27196.

I went over one line and it was 6206, which is a number, so I yanked the last elf from the list, **added 6206** to his number and stuck him back in, with a total of 33402.

I went over one line and it was 3580, which is a number, so I yanked the last elf from the list, **added 3580** to his number and stuck him back in, with a total of 36982.

I went over one line and it was 6247, which is a number, so I yanked the last elf from the list, **added 6247** to his number and stuck him back in, with a total of 43229.

I went over one line and it was 1620, which is a number, so I yanked the last elf from the list, **added 1620** to his number and stuck him back in, with a total of 44849.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2712, which is a number, so I yanked the last elf from the list, **added 2712** to his number and stuck him back in, with a total of 2712.

I went over one line and it was 10639, which is a number, so I yanked the last elf from the list, **added 10639** to his number and stuck him back in, with a total of 13351.

I went over one line and it was 6856, which is a number, so I yanked the last elf from the list, **added 6856** to his number and stuck him back in, with a total of 20207.

I went over one line and it was 8948, which is a number, so I yanked the last elf from the list, **added 8948** to his number and stuck him back in, with a total of 29155.

I went over one line and it was 1911, which is a number, so I yanked the last elf from the list, **added 1911** to his number and stuck him back in, with a total of 31066.

I went over one line and it was 1404, which is a number, so I yanked the last elf from the list, **added 1404** to his number and stuck him back in, with a total of 32470.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9349, which is a number, so I yanked the last elf from the list, **added 9349** to his number and stuck him back in, with a total of 9349.

I went over one line and it was 18213, which is a number, so I yanked the last elf from the list, **added 18213** to his number and stuck him back in, with a total of 27562.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2373, which is a number, so I yanked the last elf from the list, **added 2373** to his number and stuck him back in, with a total of 2373.

I went over one line and it was 6003, which is a number, so I yanked the last elf from the list, **added 6003** to his number and stuck him back in, with a total of 8376.

I went over one line and it was 5216, which is a number, so I yanked the last elf from the list, **added 5216** to his number and stuck him back in, with a total of 13592.

I went over one line and it was 2901, which is a number, so I yanked the last elf from the list, **added 2901** to his number and stuck him back in, with a total of 16493.

I went over one line and it was 8754, which is a number, so I yanked the last elf from the list, **added 8754** to his number and stuck him back in, with a total of 25247.

I went over one line and it was 2517, which is a number, so I yanked the last elf from the list, **added 2517** to his number and stuck him back in, with a total of 27764.

I went over one line and it was 4093, which is a number, so I yanked the last elf from the list, **added 4093** to his number and stuck him back in, with a total of 31857.

I went over one line and it was 2475, which is a number, so I yanked the last elf from the list, **added 2475** to his number and stuck him back in, with a total of 34332.

I went over one line and it was 5071, which is a number, so I yanked the last elf from the list, **added 5071** to his number and stuck him back in, with a total of 39403.

I went over one line and it was 3175, which is a number, so I yanked the last elf from the list, **added 3175** to his number and stuck him back in, with a total of 42578.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5235, which is a number, so I yanked the last elf from the list, **added 5235** to his number and stuck him back in, with a total of 5235.

I went over one line and it was 1935, which is a number, so I yanked the last elf from the list, **added 1935** to his number and stuck him back in, with a total of 7170.

I went over one line and it was 7751, which is a number, so I yanked the last elf from the list, **added 7751** to his number and stuck him back in, with a total of 14921.

I went over one line and it was 12132, which is a number, so I yanked the last elf from the list, **added 12132** to his number and stuck him back in, with a total of 27053.

I went over one line and it was 1739, which is a number, so I yanked the last elf from the list, **added 1739** to his number and stuck him back in, with a total of 28792.

I went over one line and it was 8963, which is a number, so I yanked the last elf from the list, **added 8963** to his number and stuck him back in, with a total of 37755.

I went over one line and it was 1855, which is a number, so I yanked the last elf from the list, **added 1855** to his number and stuck him back in, with a total of 39610.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3890, which is a number, so I yanked the last elf from the list, **added 3890** to his number and stuck him back in, with a total of 3890.

I went over one line and it was 4106, which is a number, so I yanked the last elf from the list, **added 4106** to his number and stuck him back in, with a total of 7996.

I went over one line and it was 3949, which is a number, so I yanked the last elf from the list, **added 3949** to his number and stuck him back in, with a total of 11945.

I went over one line and it was 4795, which is a number, so I yanked the last elf from the list, **added 4795** to his number and stuck him back in, with a total of 16740.

I went over one line and it was 2816, which is a number, so I yanked the last elf from the list, **added 2816** to his number and stuck him back in, with a total of 19556.

I went over one line and it was 1100, which is a number, so I yanked the last elf from the list, **added 1100** to his number and stuck him back in, with a total of 20656.

I went over one line and it was 1278, which is a number, so I yanked the last elf from the list, **added 1278** to his number and stuck him back in, with a total of 21934.

I went over one line and it was 2287, which is a number, so I yanked the last elf from the list, **added 2287** to his number and stuck him back in, with a total of 24221.

I went over one line and it was 2066, which is a number, so I yanked the last elf from the list, **added 2066** to his number and stuck him back in, with a total of 26287.

I went over one line and it was 5351, which is a number, so I yanked the last elf from the list, **added 5351** to his number and stuck him back in, with a total of 31638.

I went over one line and it was 4113, which is a number, so I yanked the last elf from the list, **added 4113** to his number and stuck him back in, with a total of 35751.

I went over one line and it was 4714, which is a number, so I yanked the last elf from the list, **added 4714** to his number and stuck him back in, with a total of 40465.

I went over one line and it was 4410, which is a number, so I yanked the last elf from the list, **added 4410** to his number and stuck him back in, with a total of 44875.

I went over one line and it was 2178, which is a number, so I yanked the last elf from the list, **added 2178** to his number and stuck him back in, with a total of 47053.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3575, which is a number, so I yanked the last elf from the list, **added 3575** to his number and stuck him back in, with a total of 3575.

I went over one line and it was 5434, which is a number, so I yanked the last elf from the list, **added 5434** to his number and stuck him back in, with a total of 9009.

I went over one line and it was 8010, which is a number, so I yanked the last elf from the list, **added 8010** to his number and stuck him back in, with a total of 17019.

I went over one line and it was 4677, which is a number, so I yanked the last elf from the list, **added 4677** to his number and stuck him back in, with a total of 21696.

I went over one line and it was 4524, which is a number, so I yanked the last elf from the list, **added 4524** to his number and stuck him back in, with a total of 26220.

I went over one line and it was 7438, which is a number, so I yanked the last elf from the list, **added 7438** to his number and stuck him back in, with a total of 33658.

I went over one line and it was 7363, which is a number, so I yanked the last elf from the list, **added 7363** to his number and stuck him back in, with a total of 41021.

I went over one line and it was 2150, which is a number, so I yanked the last elf from the list, **added 2150** to his number and stuck him back in, with a total of 43171.

I went over one line and it was 8133, which is a number, so I yanked the last elf from the list, **added 8133** to his number and stuck him back in, with a total of 51304.

I went over one line and it was 2840, which is a number, so I yanked the last elf from the list, **added 2840** to his number and stuck him back in, with a total of 54144.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3184, which is a number, so I yanked the last elf from the list, **added 3184** to his number and stuck him back in, with a total of 3184.

I went over one line and it was 4657, which is a number, so I yanked the last elf from the list, **added 4657** to his number and stuck him back in, with a total of 7841.

I went over one line and it was 5941, which is a number, so I yanked the last elf from the list, **added 5941** to his number and stuck him back in, with a total of 13782.

I went over one line and it was 4474, which is a number, so I yanked the last elf from the list, **added 4474** to his number and stuck him back in, with a total of 18256.

I went over one line and it was 4399, which is a number, so I yanked the last elf from the list, **added 4399** to his number and stuck him back in, with a total of 22655.

I went over one line and it was 5675, which is a number, so I yanked the last elf from the list, **added 5675** to his number and stuck him back in, with a total of 28330.

I went over one line and it was 5088, which is a number, so I yanked the last elf from the list, **added 5088** to his number and stuck him back in, with a total of 33418.

I went over one line and it was 2875, which is a number, so I yanked the last elf from the list, **added 2875** to his number and stuck him back in, with a total of 36293.

I went over one line and it was 5175, which is a number, so I yanked the last elf from the list, **added 5175** to his number and stuck him back in, with a total of 41468.

I went over one line and it was 1441, which is a number, so I yanked the last elf from the list, **added 1441** to his number and stuck him back in, with a total of 42909.

I went over one line and it was 2924, which is a number, so I yanked the last elf from the list, **added 2924** to his number and stuck him back in, with a total of 45833.

I went over one line and it was 5509, which is a number, so I yanked the last elf from the list, **added 5509** to his number and stuck him back in, with a total of 51342.

I went over one line and it was 6037, which is a number, so I yanked the last elf from the list, **added 6037** to his number and stuck him back in, with a total of 57379.

I went over one line and it was 1228, which is a number, so I yanked the last elf from the list, **added 1228** to his number and stuck him back in, with a total of 58607.

I went over one line and it was 3596, which is a number, so I yanked the last elf from the list, **added 3596** to his number and stuck him back in, with a total of 62203.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10076, which is a number, so I yanked the last elf from the list, **added 10076** to his number and stuck him back in, with a total of 10076.

I went over one line and it was 14846, which is a number, so I yanked the last elf from the list, **added 14846** to his number and stuck him back in, with a total of 24922.

I went over one line and it was 19534, which is a number, so I yanked the last elf from the list, **added 19534** to his number and stuck him back in, with a total of 44456.

I went over one line and it was 16135, which is a number, so I yanked the last elf from the list, **added 16135** to his number and stuck him back in, with a total of 60591.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3832, which is a number, so I yanked the last elf from the list, **added 3832** to his number and stuck him back in, with a total of 3832.

I went over one line and it was 5882, which is a number, so I yanked the last elf from the list, **added 5882** to his number and stuck him back in, with a total of 9714.

I went over one line and it was 5111, which is a number, so I yanked the last elf from the list, **added 5111** to his number and stuck him back in, with a total of 14825.

I went over one line and it was 2141, which is a number, so I yanked the last elf from the list, **added 2141** to his number and stuck him back in, with a total of 16966.

I went over one line and it was 1925, which is a number, so I yanked the last elf from the list, **added 1925** to his number and stuck him back in, with a total of 18891.

I went over one line and it was 4174, which is a number, so I yanked the last elf from the list, **added 4174** to his number and stuck him back in, with a total of 23065.

I went over one line and it was 2729, which is a number, so I yanked the last elf from the list, **added 2729** to his number and stuck him back in, with a total of 25794.

I went over one line and it was 5974, which is a number, so I yanked the last elf from the list, **added 5974** to his number and stuck him back in, with a total of 31768.

I went over one line and it was 1425, which is a number, so I yanked the last elf from the list, **added 1425** to his number and stuck him back in, with a total of 33193.

I went over one line and it was 4740, which is a number, so I yanked the last elf from the list, **added 4740** to his number and stuck him back in, with a total of 37933.

I went over one line and it was 2013, which is a number, so I yanked the last elf from the list, **added 2013** to his number and stuck him back in, with a total of 39946.

I went over one line and it was 5110, which is a number, so I yanked the last elf from the list, **added 5110** to his number and stuck him back in, with a total of 45056.

I went over one line and it was 5262, which is a number, so I yanked the last elf from the list, **added 5262** to his number and stuck him back in, with a total of 50318.

I went over one line and it was 3245, which is a number, so I yanked the last elf from the list, **added 3245** to his number and stuck him back in, with a total of 53563.

I went over one line and it was 2533, which is a number, so I yanked the last elf from the list, **added 2533** to his number and stuck him back in, with a total of 56096.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5321, which is a number, so I yanked the last elf from the list, **added 5321** to his number and stuck him back in, with a total of 5321.

I went over one line and it was 5818, which is a number, so I yanked the last elf from the list, **added 5818** to his number and stuck him back in, with a total of 11139.

I went over one line and it was 2415, which is a number, so I yanked the last elf from the list, **added 2415** to his number and stuck him back in, with a total of 13554.

I went over one line and it was 6348, which is a number, so I yanked the last elf from the list, **added 6348** to his number and stuck him back in, with a total of 19902.

I went over one line and it was 5720, which is a number, so I yanked the last elf from the list, **added 5720** to his number and stuck him back in, with a total of 25622.

I went over one line and it was 1424, which is a number, so I yanked the last elf from the list, **added 1424** to his number and stuck him back in, with a total of 27046.

I went over one line and it was 2960, which is a number, so I yanked the last elf from the list, **added 2960** to his number and stuck him back in, with a total of 30006.

I went over one line and it was 6265, which is a number, so I yanked the last elf from the list, **added 6265** to his number and stuck him back in, with a total of 36271.

I went over one line and it was 1630, which is a number, so I yanked the last elf from the list, **added 1630** to his number and stuck him back in, with a total of 37901.

I went over one line and it was 5768, which is a number, so I yanked the last elf from the list, **added 5768** to his number and stuck him back in, with a total of 43669.

I went over one line and it was 5328, which is a number, so I yanked the last elf from the list, **added 5328** to his number and stuck him back in, with a total of 48997.

I went over one line and it was 2655, which is a number, so I yanked the last elf from the list, **added 2655** to his number and stuck him back in, with a total of 51652.

I went over one line and it was 6323, which is a number, so I yanked the last elf from the list, **added 6323** to his number and stuck him back in, with a total of 57975.

I went over one line and it was 6363, which is a number, so I yanked the last elf from the list, **added 6363** to his number and stuck him back in, with a total of 64338.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6956, which is a number, so I yanked the last elf from the list, **added 6956** to his number and stuck him back in, with a total of 6956.

I went over one line and it was 5122, which is a number, so I yanked the last elf from the list, **added 5122** to his number and stuck him back in, with a total of 12078.

I went over one line and it was 15372, which is a number, so I yanked the last elf from the list, **added 15372** to his number and stuck him back in, with a total of 27450.

I went over one line and it was 14713, which is a number, so I yanked the last elf from the list, **added 14713** to his number and stuck him back in, with a total of 42163.

I went over one line and it was 7784, which is a number, so I yanked the last elf from the list, **added 7784** to his number and stuck him back in, with a total of 49947.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 32625, which is a number, so I yanked the last elf from the list, **added 32625** to his number and stuck him back in, with a total of 32625.

I went over one line and it was 11125, which is a number, so I yanked the last elf from the list, **added 11125** to his number and stuck him back in, with a total of 43750.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5349, which is a number, so I yanked the last elf from the list, **added 5349** to his number and stuck him back in, with a total of 5349.

I went over one line and it was 3235, which is a number, so I yanked the last elf from the list, **added 3235** to his number and stuck him back in, with a total of 8584.

I went over one line and it was 5669, which is a number, so I yanked the last elf from the list, **added 5669** to his number and stuck him back in, with a total of 14253.

I went over one line and it was 6210, which is a number, so I yanked the last elf from the list, **added 6210** to his number and stuck him back in, with a total of 20463.

I went over one line and it was 5007, which is a number, so I yanked the last elf from the list, **added 5007** to his number and stuck him back in, with a total

of 25470.

I went over one line and it was 5300, which is a number, so I yanked the last elf from the list, **added 5300** to his number and stuck him back in, with a total of 30770.

I went over one line and it was 2283, which is a number, so I yanked the last elf from the list, **added 2283** to his number and stuck him back in, with a total of 33053.

I went over one line and it was 2824, which is a number, so I yanked the last elf from the list, **added 2824** to his number and stuck him back in, with a total of 35877.

I went over one line and it was 5185, which is a number, so I yanked the last elf from the list, **added 5185** to his number and stuck him back in, with a total of 41062.

I went over one line and it was 6222, which is a number, so I yanked the last elf from the list, **added 6222** to his number and stuck him back in, with a total of 47284.

I went over one line and it was 5394, which is a number, so I yanked the last elf from the list, **added 5394** to his number and stuck him back in, with a total of 52678.

I went over one line and it was 4139, which is a number, so I yanked the last elf from the list, **added 4139** to his number and stuck him back in, with a total of 56817.

I went over one line and it was 1300, which is a number, so I yanked the last elf from the list, **added 1300** to his number and stuck him back in, with a total of 58117.

I went over one line and it was 1677, which is a number, so I yanked the last elf from the list, **added 1677** to his number and stuck him back in, with a total of 59794.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6416, which is a number, so I yanked the last elf from the list, **added 6416** to his number and stuck him back in, with a total of 6416.

I went over one line and it was 8235, which is a number, so I yanked the last elf from the list, **added 8235** to his number and stuck him back in, with a total

of 14651.

I went over one line and it was 5091, which is a number, so I yanked the last elf from the list, **added 5091** to his number and stuck him back in, with a total of 19742.

I went over one line and it was 7099, which is a number, so I yanked the last elf from the list, **added 7099** to his number and stuck him back in, with a total of 26841.

I went over one line and it was 8016, which is a number, so I yanked the last elf from the list, **added 8016** to his number and stuck him back in, with a total of 34857.

I went over one line and it was 5993, which is a number, so I yanked the last elf from the list, **added 5993** to his number and stuck him back in, with a total of 40850.

I went over one line and it was 5297, which is a number, so I yanked the last elf from the list, **added 5297** to his number and stuck him back in, with a total of 46147.

I went over one line and it was 4554, which is a number, so I yanked the last elf from the list, **added 4554** to his number and stuck him back in, with a total of 50701.

I went over one line and it was 1919, which is a number, so I yanked the last elf from the list, **added 1919** to his number and stuck him back in, with a total of 52620.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7685, which is a number, so I yanked the last elf from the list, **added 7685** to his number and stuck him back in, with a total of 7685.

I went over one line and it was 8321, which is a number, so I yanked the last elf from the list, **added 8321** to his number and stuck him back in, with a total of 16006.

I went over one line and it was 8192, which is a number, so I yanked the last elf from the list, **added 8192** to his number and stuck him back in, with a total of 24198.

I went over one line and it was 8798, which is a number, so I yanked the last elf from the list, **added 8798** to his number and stuck him back in, with a total

of 32996.

I went over one line and it was 3673, which is a number, so I yanked the last elf from the list, **added 3673** to his number and stuck him back in, with a total of 36669.

I went over one line and it was 5084, which is a number, so I yanked the last elf from the list, **added 5084** to his number and stuck him back in, with a total of 41753.

I went over one line and it was 8042, which is a number, so I yanked the last elf from the list, **added 8042** to his number and stuck him back in, with a total of 49795.

I went over one line and it was 7700, which is a number, so I yanked the last elf from the list, **added 7700** to his number and stuck him back in, with a total of 57495.

I went over one line and it was 9121, which is a number, so I yanked the last elf from the list, **added 9121** to his number and stuck him back in, with a total of 66616.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 16486, which is a number, so I yanked the last elf from the list, **added 16486** to his number and stuck him back in, with a total of 16486.

I went over one line and it was 10677, which is a number, so I yanked the last elf from the list, **added 10677** to his number and stuck him back in, with a total of 27163.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9499, which is a number, so I yanked the last elf from the list, **added 9499** to his number and stuck him back in, with a total of 9499.

I went over one line and it was 5512, which is a number, so I yanked the last elf from the list, **added 5512** to his number and stuck him back in, with a total of 15011.

I went over one line and it was 13379, which is a number, so I yanked the last elf from the list, **added 13379** to his number and stuck him back in, with a total of 28390.

I went over one line and it was 13851, which is a number, so I yanked the last elf from the list, **added 13851** to his number and stuck him back in, with a total of 42241.

I went over one line and it was 12439, which is a number, so I yanked the last elf from the list, **added 12439** to his number and stuck him back in, with a total of 54680.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4919, which is a number, so I yanked the last elf from the list, **added 4919** to his number and stuck him back in, with a total of 4919.

I went over one line and it was 9292, which is a number, so I yanked the last elf from the list, **added 9292** to his number and stuck him back in, with a total of 14211.

I went over one line and it was 5319, which is a number, so I yanked the last elf from the list, **added 5319** to his number and stuck him back in, with a total of 19530.

I went over one line and it was 5220, which is a number, so I yanked the last elf from the list, **added 5220** to his number and stuck him back in, with a total of 24750.

I went over one line and it was 8546, which is a number, so I yanked the last elf from the list, **added 8546** to his number and stuck him back in, with a total of 33296.

I went over one line and it was 2005, which is a number, so I yanked the last elf from the list, **added 2005** to his number and stuck him back in, with a total of 35301.

I went over one line and it was 6429, which is a number, so I yanked the last elf from the list, **added 6429** to his number and stuck him back in, with a total of 41730.

I went over one line and it was 5510, which is a number, so I yanked the last elf from the list, **added 5510** to his number and stuck him back in, with a total of 47240.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1977, which is a number, so I yanked the last elf from the list, **added 1977** to his number and stuck him back in, with a total

of 1977.

I went over one line and it was 1671, which is a number, so I yanked the last elf from the list, **added 1671** to his number and stuck him back in, with a total of 3648.

I went over one line and it was 2792, which is a number, so I yanked the last elf from the list, **added 2792** to his number and stuck him back in, with a total of 6440.

I went over one line and it was 6173, which is a number, so I yanked the last elf from the list, **added 6173** to his number and stuck him back in, with a total of 12613.

I went over one line and it was 3483, which is a number, so I yanked the last elf from the list, **added 3483** to his number and stuck him back in, with a total of 16096.

I went over one line and it was 1069, which is a number, so I yanked the last elf from the list, **added 1069** to his number and stuck him back in, with a total of 17165.

I went over one line and it was 1892, which is a number, so I yanked the last elf from the list, **added 1892** to his number and stuck him back in, with a total of 19057.

I went over one line and it was 4190, which is a number, so I yanked the last elf from the list, **added 4190** to his number and stuck him back in, with a total of 23247.

I went over one line and it was 6263, which is a number, so I yanked the last elf from the list, **added 6263** to his number and stuck him back in, with a total of 29510.

I went over one line and it was 6184, which is a number, so I yanked the last elf from the list, **added 6184** to his number and stuck him back in, with a total of 35694.

I went over one line and it was 3514, which is a number, so I yanked the last elf from the list, **added 3514** to his number and stuck him back in, with a total of 39208.

I went over one line and it was 5813, which is a number, so I yanked the last elf from the list, **added 5813** to his number and stuck him back in, with a total of 45021.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3784, which is a number, so I yanked the last elf from the list, **added 3784** to his number and stuck him back in, with a total of 3784.

I went over one line and it was 6795, which is a number, so I yanked the last elf from the list, **added 6795** to his number and stuck him back in, with a total of 10579.

I went over one line and it was 1693, which is a number, so I yanked the last elf from the list, **added 1693** to his number and stuck him back in, with a total of 12272.

I went over one line and it was 2493, which is a number, so I yanked the last elf from the list, **added 2493** to his number and stuck him back in, with a total of 14765.

I went over one line and it was 5963, which is a number, so I yanked the last elf from the list, **added 5963** to his number and stuck him back in, with a total of 20728.

I went over one line and it was 3511, which is a number, so I yanked the last elf from the list, **added 3511** to his number and stuck him back in, with a total of 24239.

I went over one line and it was 6278, which is a number, so I yanked the last elf from the list, **added 6278** to his number and stuck him back in, with a total of 30517.

I went over one line and it was 2558, which is a number, so I yanked the last elf from the list, **added 2558** to his number and stuck him back in, with a total of 33075.

I went over one line and it was 4924, which is a number, so I yanked the last elf from the list, **added 4924** to his number and stuck him back in, with a total of 37999.

I went over one line and it was 1523, which is a number, so I yanked the last elf from the list, **added 1523** to his number and stuck him back in, with a total of 39522.

I went over one line and it was 5279, which is a number, so I yanked the last elf from the list, **added 5279** to his number and stuck him back in, with a total of 44801.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2053, which is a number, so I yanked the last elf from the list, **added 2053** to his number and stuck him back in, with a total of 2053.

I went over one line and it was 1812, which is a number, so I yanked the last elf from the list, **added 1812** to his number and stuck him back in, with a total of 3865.

I went over one line and it was 1696, which is a number, so I yanked the last elf from the list, **added 1696** to his number and stuck him back in, with a total of 5561.

I went over one line and it was 1917, which is a number, so I yanked the last elf from the list, **added 1917** to his number and stuck him back in, with a total of 7478.

I went over one line and it was 6417, which is a number, so I yanked the last elf from the list, **added 6417** to his number and stuck him back in, with a total of 13895.

I went over one line and it was 6031, which is a number, so I yanked the last elf from the list, **added 6031** to his number and stuck him back in, with a total of 19926.

I went over one line and it was 7956, which is a number, so I yanked the last elf from the list, **added 7956** to his number and stuck him back in, with a total of 27882.

I went over one line and it was 7385, which is a number, so I yanked the last elf from the list, **added 7385** to his number and stuck him back in, with a total of 35267.

I went over one line and it was 2764, which is a number, so I yanked the last elf from the list, **added 2764** to his number and stuck him back in, with a total of 38031.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4899, which is a number, so I yanked the last elf from the list, **added 4899** to his number and stuck him back in, with a total of 4899.

I went over one line and it was 2174, which is a number, so I yanked the last elf from the list, **added 2174** to his number and stuck him back in, with a total

of 7073.

I went over one line and it was 15256, which is a number, so I yanked the last elf from the list, **added 15256** to his number and stuck him back in, with a total of 22329.

I went over one line and it was 8489, which is a number, so I yanked the last elf from the list, **added 8489** to his number and stuck him back in, with a total of 30818.

I went over one line and it was 4745, which is a number, so I yanked the last elf from the list, **added 4745** to his number and stuck him back in, with a total of 35563.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4366, which is a number, so I yanked the last elf from the list, **added 4366** to his number and stuck him back in, with a total of 4366.

I went over one line and it was 2569, which is a number, so I yanked the last elf from the list, **added 2569** to his number and stuck him back in, with a total of 6935.

I went over one line and it was 8990, which is a number, so I yanked the last elf from the list, **added 8990** to his number and stuck him back in, with a total of 15925.

I went over one line and it was 4173, which is a number, so I yanked the last elf from the list, **added 4173** to his number and stuck him back in, with a total of 20098.

I went over one line and it was 8144, which is a number, so I yanked the last elf from the list, **added 8144** to his number and stuck him back in, with a total of 28242.

I went over one line and it was 6488, which is a number, so I yanked the last elf from the list, **added 6488** to his number and stuck him back in, with a total of 34730.

I went over one line and it was 1033, which is a number, so I yanked the last elf from the list, **added 1033** to his number and stuck him back in, with a total of 35763.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7989, which is a number, so I yanked the last elf from the list, **added 7989** to his number and stuck him back in, with a total of 7989.

I went over one line and it was 8202, which is a number, so I yanked the last elf from the list, **added 8202** to his number and stuck him back in, with a total of 16191.

I went over one line and it was 3781, which is a number, so I yanked the last elf from the list, **added 3781** to his number and stuck him back in, with a total of 19972.

I went over one line and it was 1358, which is a number, so I yanked the last elf from the list, **added 1358** to his number and stuck him back in, with a total of 21330.

I went over one line and it was 6093, which is a number, so I yanked the last elf from the list, **added 6093** to his number and stuck him back in, with a total of 27423.

I went over one line and it was 8358, which is a number, so I yanked the last elf from the list, **added 8358** to his number and stuck him back in, with a total of 35781.

I went over one line and it was 4047, which is a number, so I yanked the last elf from the list, **added 4047** to his number and stuck him back in, with a total of 39828.

I went over one line and it was 4562, which is a number, so I yanked the last elf from the list, **added 4562** to his number and stuck him back in, with a total of 44390.

I went over one line and it was 4289, which is a number, so I yanked the last elf from the list, **added 4289** to his number and stuck him back in, with a total of 48679.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5660, which is a number, so I yanked the last elf from the list, **added 5660** to his number and stuck him back in, with a total of 5660.

I went over one line and it was 8763, which is a number, so I yanked the last elf from the list, **added 8763** to his number and stuck him back in, with a total of 14423.

I went over one line and it was 7099, which is a number, so I yanked the last elf from the list, **added 7099** to his number and stuck him back in, with a total of 21522.

I went over one line and it was 12118, which is a number, so I yanked the last elf from the list, **added 12118** to his number and stuck him back in, with a total of 33640.

I went over one line and it was 4652, which is a number, so I yanked the last elf from the list, **added 4652** to his number and stuck him back in, with a total of 38292.

I went over one line and it was 6537, which is a number, so I yanked the last elf from the list, **added 6537** to his number and stuck him back in, with a total of 44829.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5511, which is a number, so I yanked the last elf from the list, **added 5511** to his number and stuck him back in, with a total of 5511.

I went over one line and it was 1780, which is a number, so I yanked the last elf from the list, **added 1780** to his number and stuck him back in, with a total of 7291.

I went over one line and it was 4502, which is a number, so I yanked the last elf from the list, **added 4502** to his number and stuck him back in, with a total of 11793.

I went over one line and it was 4999, which is a number, so I yanked the last elf from the list, **added 4999** to his number and stuck him back in, with a total of 16792.

I went over one line and it was 1990, which is a number, so I yanked the last elf from the list, **added 1990** to his number and stuck him back in, with a total of 18782.

I went over one line and it was 2554, which is a number, so I yanked the last elf from the list, **added 2554** to his number and stuck him back in, with a total of 21336.

I went over one line and it was 3552, which is a number, so I yanked the last elf from the list, **added 3552** to his number and stuck him back in, with a total of 24888.

I went over one line and it was 3589, which is a number, so I yanked the last elf from the list, **added 3589** to his number and stuck him back in, with a total of 28477.

I went over one line and it was 1418, which is a number, so I yanked the last elf from the list, **added 1418** to his number and stuck him back in, with a total of 29895.

I went over one line and it was 1354, which is a number, so I yanked the last elf from the list, **added 1354** to his number and stuck him back in, with a total of 31249.

I went over one line and it was 4151, which is a number, so I yanked the last elf from the list, **added 4151** to his number and stuck him back in, with a total of 35400.

I went over one line and it was 5500, which is a number, so I yanked the last elf from the list, **added 5500** to his number and stuck him back in, with a total of 40900.

I went over one line and it was 1057, which is a number, so I yanked the last elf from the list, **added 1057** to his number and stuck him back in, with a total of 41957.

I went over one line and it was 5282, which is a number, so I yanked the last elf from the list, **added 5282** to his number and stuck him back in, with a total of 47239.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5675, which is a number, so I yanked the last elf from the list, **added 5675** to his number and stuck him back in, with a total of 5675.

I went over one line and it was 1099, which is a number, so I yanked the last elf from the list, **added 1099** to his number and stuck him back in, with a total of 6774.

I went over one line and it was 4235, which is a number, so I yanked the last elf from the list, **added 4235** to his number and stuck him back in, with a total of 11009.

I went over one line and it was 3506, which is a number, so I yanked the last elf from the list, **added 3506** to his number and stuck him back in, with a total of 14515.

I went over one line and it was 3293, which is a number, so I yanked the last elf from the list, **added 3293** to his number and stuck him back in, with a total of 17808.

I went over one line and it was 4472, which is a number, so I yanked the last elf from the list, **added 4472** to his number and stuck him back in, with a total of 22280.

I went over one line and it was 3878, which is a number, so I yanked the last elf from the list, **added 3878** to his number and stuck him back in, with a total of 26158.

I went over one line and it was 5262, which is a number, so I yanked the last elf from the list, **added 5262** to his number and stuck him back in, with a total of 31420.

I went over one line and it was 3734, which is a number, so I yanked the last elf from the list, **added 3734** to his number and stuck him back in, with a total of 35154.

I went over one line and it was 5692, which is a number, so I yanked the last elf from the list, **added 5692** to his number and stuck him back in, with a total of 40846.

I went over one line and it was 4205, which is a number, so I yanked the last elf from the list, **added 4205** to his number and stuck him back in, with a total of 45051.

I went over one line and it was 3469, which is a number, so I yanked the last elf from the list, **added 3469** to his number and stuck him back in, with a total of 48520.

I went over one line and it was 2879, which is a number, so I yanked the last elf from the list, **added 2879** to his number and stuck him back in, with a total of 51399.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2747, which is a number, so I yanked the last elf from the list, **added 2747** to his number and stuck him back in, with a total of 2747.

I went over one line and it was 2909, which is a number, so I yanked the last elf from the list, **added 2909** to his number and stuck him back in, with a total of 5656.

I went over one line and it was 2608, which is a number, so I yanked the last elf from the list, **added 2608** to his number and stuck him back in, with a total of 8264.

I went over one line and it was 2324, which is a number, so I yanked the last elf from the list, **added 2324** to his number and stuck him back in, with a total of 10588.

I went over one line and it was 1421, which is a number, so I yanked the last elf from the list, **added 1421** to his number and stuck him back in, with a total of 12009.

I went over one line and it was 2801, which is a number, so I yanked the last elf from the list, **added 2801** to his number and stuck him back in, with a total of 14810.

I went over one line and it was 1022, which is a number, so I yanked the last elf from the list, **added 1022** to his number and stuck him back in, with a total of 15832.

I went over one line and it was 4630, which is a number, so I yanked the last elf from the list, **added 4630** to his number and stuck him back in, with a total of 20462.

I went over one line and it was 2335, which is a number, so I yanked the last elf from the list, **added 2335** to his number and stuck him back in, with a total of 22797.

I went over one line and it was 5494, which is a number, so I yanked the last elf from the list, **added 5494** to his number and stuck him back in, with a total of 28291.

I went over one line and it was 2780, which is a number, so I yanked the last elf from the list, **added 2780** to his number and stuck him back in, with a total of 31071.

I went over one line and it was 3638, which is a number, so I yanked the last elf from the list, **added 3638** to his number and stuck him back in, with a total of 34709.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4808, which is a number, so I yanked the last elf from the list, **added 4808** to his number and stuck him back in, with a total of 4808.

I went over one line and it was 5061, which is a number, so I yanked the last elf from the list, **added 5061** to his number and stuck him back in, with a total of 9869.

I went over one line and it was 4974, which is a number, so I yanked the last elf from the list, **added 4974** to his number and stuck him back in, with a total of 14843.

I went over one line and it was 2064, which is a number, so I yanked the last elf from the list, **added 2064** to his number and stuck him back in, with a total of 16907.

I went over one line and it was 4797, which is a number, so I yanked the last elf from the list, **added 4797** to his number and stuck him back in, with a total of 21704.

I went over one line and it was 5901, which is a number, so I yanked the last elf from the list, **added 5901** to his number and stuck him back in, with a total of 27605.

I went over one line and it was 4819, which is a number, so I yanked the last elf from the list, **added 4819** to his number and stuck him back in, with a total of 32424.

I went over one line and it was 6736, which is a number, so I yanked the last elf from the list, **added 6736** to his number and stuck him back in, with a total of 39160.

I went over one line and it was 5356, which is a number, so I yanked the last elf from the list, **added 5356** to his number and stuck him back in, with a total of 44516.

I went over one line and it was 4876, which is a number, so I yanked the last elf from the list, **added 4876** to his number and stuck him back in, with a total of 49392.

I went over one line and it was 6530, which is a number, so I yanked the last elf from the list, **added 6530** to his number and stuck him back in, with a total of 55922.

I went over one line and it was 6011, which is a number, so I yanked the last elf from the list, **added 6011** to his number and stuck him back in, with a total of 61933.

I went over one line and it was 4317, which is a number, so I yanked the last elf from the list, **added 4317** to his number and stuck him back in, with a total

of 66250.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3044, which is a number, so I yanked the last elf from the list, **added 3044** to his number and stuck him back in, with a total of 3044.

I went over one line and it was 2230, which is a number, so I yanked the last elf from the list, **added 2230** to his number and stuck him back in, with a total of 5274.

I went over one line and it was 2371, which is a number, so I yanked the last elf from the list, **added 2371** to his number and stuck him back in, with a total of 7645.

I went over one line and it was 4651, which is a number, so I yanked the last elf from the list, **added 4651** to his number and stuck him back in, with a total of 12296.

I went over one line and it was 3437, which is a number, so I yanked the last elf from the list, **added 3437** to his number and stuck him back in, with a total of 15733.

I went over one line and it was 4759, which is a number, so I yanked the last elf from the list, **added 4759** to his number and stuck him back in, with a total of 20492.

I went over one line and it was 4145, which is a number, so I yanked the last elf from the list, **added 4145** to his number and stuck him back in, with a total of 24637.

I went over one line and it was 1845, which is a number, so I yanked the last elf from the list, **added 1845** to his number and stuck him back in, with a total of 26482.

I went over one line and it was 1327, which is a number, so I yanked the last elf from the list, **added 1327** to his number and stuck him back in, with a total of 27809.

I went over one line and it was 4512, which is a number, so I yanked the last elf from the list, **added 4512** to his number and stuck him back in, with a total of 32321.

I went over one line and it was 6172, which is a number, so I yanked the last elf from the list, **added 6172** to his number and stuck him back in, with a total

of 38493.

I went over one line and it was 3741, which is a number, so I yanked the last elf from the list, **added 3741** to his number and stuck him back in, with a total of 42234.

I went over one line and it was 2817, which is a number, so I yanked the last elf from the list, **added 2817** to his number and stuck him back in, with a total of 45051.

I went over one line and it was 4810, which is a number, so I yanked the last elf from the list, **added 4810** to his number and stuck him back in, with a total of 49861.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3319, which is a number, so I yanked the last elf from the list, **added 3319** to his number and stuck him back in, with a total of 3319.

I went over one line and it was 5963, which is a number, so I yanked the last elf from the list, **added 5963** to his number and stuck him back in, with a total of 9282.

I went over one line and it was 5235, which is a number, so I yanked the last elf from the list, **added 5235** to his number and stuck him back in, with a total of 14517.

I went over one line and it was 2536, which is a number, so I yanked the last elf from the list, **added 2536** to his number and stuck him back in, with a total of 17053.

I went over one line and it was 6866, which is a number, so I yanked the last elf from the list, **added 6866** to his number and stuck him back in, with a total of 23919.

I went over one line and it was 4904, which is a number, so I yanked the last elf from the list, **added 4904** to his number and stuck him back in, with a total of 28823.

I went over one line and it was 3523, which is a number, so I yanked the last elf from the list, **added 3523** to his number and stuck him back in, with a total of 32346.

I went over one line and it was 4587, which is a number, so I yanked the last elf from the list, **added 4587** to his number and stuck him back in, with a total

of 36933.

I went over one line and it was 4877, which is a number, so I yanked the last elf from the list, **added 4877** to his number and stuck him back in, with a total of 41810.

I went over one line and it was 6773, which is a number, so I yanked the last elf from the list, **added 6773** to his number and stuck him back in, with a total of 48583.

I went over one line and it was 2652, which is a number, so I yanked the last elf from the list, **added 2652** to his number and stuck him back in, with a total of 51235.

I went over one line and it was 2462, which is a number, so I yanked the last elf from the list, **added 2462** to his number and stuck him back in, with a total of 53697.

I went over one line and it was 3030, which is a number, so I yanked the last elf from the list, **added 3030** to his number and stuck him back in, with a total of 56727.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3231, which is a number, so I yanked the last elf from the list, **added 3231** to his number and stuck him back in, with a total of 3231.

I went over one line and it was 7432, which is a number, so I yanked the last elf from the list, **added 7432** to his number and stuck him back in, with a total of 10663.

I went over one line and it was 6805, which is a number, so I yanked the last elf from the list, **added 6805** to his number and stuck him back in, with a total of 17468.

I went over one line and it was 5632, which is a number, so I yanked the last elf from the list, **added 5632** to his number and stuck him back in, with a total of 23100.

I went over one line and it was 1398, which is a number, so I yanked the last elf from the list, **added 1398** to his number and stuck him back in, with a total of 24498.

I went over one line and it was 5278, which is a number, so I yanked the last elf from the list, **added 5278** to his number and stuck him back in, with a total

of 29776.

I went over one line and it was 6545, which is a number, so I yanked the last elf from the list, **added 6545** to his number and stuck him back in, with a total of 36321.

I went over one line and it was 2076, which is a number, so I yanked the last elf from the list, **added 2076** to his number and stuck him back in, with a total of 38397.

I went over one line and it was 4940, which is a number, so I yanked the last elf from the list, **added 4940** to his number and stuck him back in, with a total of 43337.

I went over one line and it was 2754, which is a number, so I yanked the last elf from the list, **added 2754** to his number and stuck him back in, with a total of 46091.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2990, which is a number, so I yanked the last elf from the list, **added 2990** to his number and stuck him back in, with a total of 2990.

I went over one line and it was 7260, which is a number, so I yanked the last elf from the list, **added 7260** to his number and stuck him back in, with a total of 10250.

I went over one line and it was 4550, which is a number, so I yanked the last elf from the list, **added 4550** to his number and stuck him back in, with a total of 14800.

I went over one line and it was 2885, which is a number, so I yanked the last elf from the list, **added 2885** to his number and stuck him back in, with a total of 17685.

I went over one line and it was 8785, which is a number, so I yanked the last elf from the list, **added 8785** to his number and stuck him back in, with a total of 26470.

I went over one line and it was 5737, which is a number, so I yanked the last elf from the list, **added 5737** to his number and stuck him back in, with a total of 32207.

I went over one line and it was 3501, which is a number, so I yanked the last elf from the list, **added 3501** to his number and stuck him back in, with a total

of 35708.

I went over one line and it was 2019, which is a number, so I yanked the last elf from the list, **added 2019** to his number and stuck him back in, with a total of 37727.

I went over one line and it was 8647, which is a number, so I yanked the last elf from the list, **added 8647** to his number and stuck him back in, with a total of 46374.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4493, which is a number, so I yanked the last elf from the list, **added 4493** to his number and stuck him back in, with a total of 4493.

I went over one line and it was 8668, which is a number, so I yanked the last elf from the list, **added 8668** to his number and stuck him back in, with a total of 13161.

I went over one line and it was 5035, which is a number, so I yanked the last elf from the list, **added 5035** to his number and stuck him back in, with a total of 18196.

I went over one line and it was 9120, which is a number, so I yanked the last elf from the list, **added 9120** to his number and stuck him back in, with a total of 27316.

I went over one line and it was 9324, which is a number, so I yanked the last elf from the list, **added 9324** to his number and stuck him back in, with a total of 36640.

I went over one line and it was 2968, which is a number, so I yanked the last elf from the list, **added 2968** to his number and stuck him back in, with a total of 39608.

I went over one line and it was 2428, which is a number, so I yanked the last elf from the list, **added 2428** to his number and stuck him back in, with a total of 42036.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6289, which is a number, so I yanked the last elf from the list, **added 6289** to his number and stuck him back in, with a total of 6289.

I went over one line and it was 3485, which is a number, so I yanked the last elf from the list, **added 3485** to his number and stuck him back in, with a total of 9774.

I went over one line and it was 2200, which is a number, so I yanked the last elf from the list, **added 2200** to his number and stuck him back in, with a total of 11974.

I went over one line and it was 3382, which is a number, so I yanked the last elf from the list, **added 3382** to his number and stuck him back in, with a total of 15356.

I went over one line and it was 5783, which is a number, so I yanked the last elf from the list, **added 5783** to his number and stuck him back in, with a total of 21139.

I went over one line and it was 6146, which is a number, so I yanked the last elf from the list, **added 6146** to his number and stuck him back in, with a total of 27285.

I went over one line and it was 3018, which is a number, so I yanked the last elf from the list, **added 3018** to his number and stuck him back in, with a total of 30303.

I went over one line and it was 4079, which is a number, so I yanked the last elf from the list, **added 4079** to his number and stuck him back in, with a total of 34382.

I went over one line and it was 4596, which is a number, so I yanked the last elf from the list, **added 4596** to his number and stuck him back in, with a total of 38978.

I went over one line and it was 1116, which is a number, so I yanked the last elf from the list, **added 1116** to his number and stuck him back in, with a total of 40094.

I went over one line and it was 3919, which is a number, so I yanked the last elf from the list, **added 3919** to his number and stuck him back in, with a total of 44013.

I went over one line and it was 2760, which is a number, so I yanked the last elf from the list, **added 2760** to his number and stuck him back in, with a total of 46773.

I went over one line and it was 2861, which is a number, so I yanked the last elf from the list, **added 2861** to his number and stuck him back in, with a total

of 49634.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7625, which is a number, so I yanked the last elf from the list, **added 7625** to his number and stuck him back in, with a total of 7625.

I went over one line and it was 12909, which is a number, so I yanked the last elf from the list, **added 12909** to his number and stuck him back in, with a total of 20534.

I went over one line and it was 13695, which is a number, so I yanked the last elf from the list, **added 13695** to his number and stuck him back in, with a total of 34229.

I went over one line and it was 7903, which is a number, so I yanked the last elf from the list, **added 7903** to his number and stuck him back in, with a total of 42132.

I went over one line and it was 4340, which is a number, so I yanked the last elf from the list, **added 4340** to his number and stuck him back in, with a total of 46472.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4798, which is a number, so I yanked the last elf from the list, **added 4798** to his number and stuck him back in, with a total of 4798.

I went over one line and it was 4783, which is a number, so I yanked the last elf from the list, **added 4783** to his number and stuck him back in, with a total of 9581.

I went over one line and it was 6796, which is a number, so I yanked the last elf from the list, **added 6796** to his number and stuck him back in, with a total of 16377.

I went over one line and it was 6200, which is a number, so I yanked the last elf from the list, **added 6200** to his number and stuck him back in, with a total of 22577.

I went over one line and it was 5999, which is a number, so I yanked the last elf from the list, **added 5999** to his number and stuck him back in, with a total of 28576.

I went over one line and it was 6061, which is a number, so I yanked the last elf from the list, **added 6061** to his number and stuck him back in, with a total of 34637.

I went over one line and it was 3060, which is a number, so I yanked the last elf from the list, **added 3060** to his number and stuck him back in, with a total of 37697.

I went over one line and it was 3896, which is a number, so I yanked the last elf from the list, **added 3896** to his number and stuck him back in, with a total of 41593.

I went over one line and it was 7634, which is a number, so I yanked the last elf from the list, **added 7634** to his number and stuck him back in, with a total of 49227.

I went over one line and it was 7644, which is a number, so I yanked the last elf from the list, **added 7644** to his number and stuck him back in, with a total of 56871.

I went over one line and it was 1794, which is a number, so I yanked the last elf from the list, **added 1794** to his number and stuck him back in, with a total of 58665.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8485, which is a number, so I yanked the last elf from the list, **added 8485** to his number and stuck him back in, with a total of 8485.

I went over one line and it was 10545, which is a number, so I yanked the last elf from the list, **added 10545** to his number and stuck him back in, with a total of 19030.

I went over one line and it was 13132, which is a number, so I yanked the last elf from the list, **added 13132** to his number and stuck him back in, with a total of 32162.

I went over one line and it was 5653, which is a number, so I yanked the last elf from the list, **added 5653** to his number and stuck him back in, with a total of 37815.

I went over one line and it was 13306, which is a number, so I yanked the last elf from the list, **added 13306** to his number and stuck him back in, with a total of 51121.

I went over one line and it was 8014, which is a number, so I yanked the last elf from the list, **added 8014** to his number and stuck him back in, with a total of 59135.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5758, which is a number, so I yanked the last elf from the list, **added 5758** to his number and stuck him back in, with a total of 5758.

I went over one line and it was 3284, which is a number, so I yanked the last elf from the list, **added 3284** to his number and stuck him back in, with a total of 9042.

I went over one line and it was 6741, which is a number, so I yanked the last elf from the list, **added 6741** to his number and stuck him back in, with a total of 15783.

I went over one line and it was 2987, which is a number, so I yanked the last elf from the list, **added 2987** to his number and stuck him back in, with a total of 18770.

I went over one line and it was 3970, which is a number, so I yanked the last elf from the list, **added 3970** to his number and stuck him back in, with a total of 22740.

I went over one line and it was 4669, which is a number, so I yanked the last elf from the list, **added 4669** to his number and stuck him back in, with a total of 27409.

I went over one line and it was 4410, which is a number, so I yanked the last elf from the list, **added 4410** to his number and stuck him back in, with a total of 31819.

I went over one line and it was 5673, which is a number, so I yanked the last elf from the list, **added 5673** to his number and stuck him back in, with a total of 37492.

I went over one line and it was 5765, which is a number, so I yanked the last elf from the list, **added 5765** to his number and stuck him back in, with a total of 43257.

I went over one line and it was 6895, which is a number, so I yanked the last elf from the list, **added 6895** to his number and stuck him back in, with a total of 50152.

I went over one line and it was 1887, which is a number, so I yanked the last elf from the list, **added 1887** to his number and stuck him back in, with a total of 52039.

I went over one line and it was 4852, which is a number, so I yanked the last elf from the list, **added 4852** to his number and stuck him back in, with a total of 56891.

I went over one line and it was 4019, which is a number, so I yanked the last elf from the list, **added 4019** to his number and stuck him back in, with a total of 60910.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4657, which is a number, so I yanked the last elf from the list, **added 4657** to his number and stuck him back in, with a total of 4657.

I went over one line and it was 8052, which is a number, so I yanked the last elf from the list, **added 8052** to his number and stuck him back in, with a total of 12709.

I went over one line and it was 6669, which is a number, so I yanked the last elf from the list, **added 6669** to his number and stuck him back in, with a total of 19378.

I went over one line and it was 3467, which is a number, so I yanked the last elf from the list, **added 3467** to his number and stuck him back in, with a total of 22845.

I went over one line and it was 8919, which is a number, so I yanked the last elf from the list, **added 8919** to his number and stuck him back in, with a total of 31764.

I went over one line and it was 2273, which is a number, so I yanked the last elf from the list, **added 2273** to his number and stuck him back in, with a total of 34037.

I went over one line and it was 1255, which is a number, so I yanked the last elf from the list, **added 1255** to his number and stuck him back in, with a total of 35292.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6289, which is a number, so I yanked the last elf from the list, **added 6289** to his number and stuck him back in, with a total

of 6289.

I went over one line and it was 6824, which is a number, so I yanked the last elf from the list, **added 6824** to his number and stuck him back in, with a total of 13113.

I went over one line and it was 6157, which is a number, so I yanked the last elf from the list, **added 6157** to his number and stuck him back in, with a total of 19270.

I went over one line and it was 5043, which is a number, so I yanked the last elf from the list, **added 5043** to his number and stuck him back in, with a total of 24313.

I went over one line and it was 4502, which is a number, so I yanked the last elf from the list, **added 4502** to his number and stuck him back in, with a total of 28815.

I went over one line and it was 5268, which is a number, so I yanked the last elf from the list, **added 5268** to his number and stuck him back in, with a total of 34083.

I went over one line and it was 3889, which is a number, so I yanked the last elf from the list, **added 3889** to his number and stuck him back in, with a total of 37972.

I went over one line and it was 2896, which is a number, so I yanked the last elf from the list, **added 2896** to his number and stuck him back in, with a total of 40868.

I went over one line and it was 1904, which is a number, so I yanked the last elf from the list, **added 1904** to his number and stuck him back in, with a total of 42772.

I went over one line and it was 5278, which is a number, so I yanked the last elf from the list, **added 5278** to his number and stuck him back in, with a total of 48050.

I went over one line and it was 1395, which is a number, so I yanked the last elf from the list, **added 1395** to his number and stuck him back in, with a total of 49445.

I went over one line and it was 4423, which is a number, so I yanked the last elf from the list, **added 4423** to his number and stuck him back in, with a total of 53868.

I went over one line and it was 3589, which is a number, so I yanked the last elf from the list, **added 3589** to his number and stuck him back in, with a total of 57457.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4372, which is a number, so I yanked the last elf from the list, **added 4372** to his number and stuck him back in, with a total of 4372.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 49650, which is a number, so I yanked the last elf from the list, **added 49650** to his number and stuck him back in, with a total of 49650.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3641, which is a number, so I yanked the last elf from the list, **added 3641** to his number and stuck him back in, with a total of 3641.

I went over one line and it was 1463, which is a number, so I yanked the last elf from the list, **added 1463** to his number and stuck him back in, with a total of 5104.

I went over one line and it was 2529, which is a number, so I yanked the last elf from the list, **added 2529** to his number and stuck him back in, with a total of 7633.

I went over one line and it was 2741, which is a number, so I yanked the last elf from the list, **added 2741** to his number and stuck him back in, with a total of 10374.

I went over one line and it was 2626, which is a number, so I yanked the last elf from the list, **added 2626** to his number and stuck him back in, with a total of 13000.

I went over one line and it was 1104, which is a number, so I yanked the last elf from the list, **added 1104** to his number and stuck him back in, with a total of 14104.

I went over one line and it was 6111, which is a number, so I yanked the last elf from the list, **added 6111** to his number and stuck him back in, with a total of 20215.

I went over one line and it was 4427, which is a number, so I yanked the last elf from the list, **added 4427** to his number and stuck him back in, with a total of 24642.

I went over one line and it was 6694, which is a number, so I yanked the last elf from the list, **added 6694** to his number and stuck him back in, with a total of 31336.

I went over one line and it was 6265, which is a number, so I yanked the last elf from the list, **added 6265** to his number and stuck him back in, with a total of 37601.

I went over one line and it was 2993, which is a number, so I yanked the last elf from the list, **added 2993** to his number and stuck him back in, with a total of 40594.

I went over one line and it was 3122, which is a number, so I yanked the last elf from the list, **added 3122** to his number and stuck him back in, with a total of 43716.

I went over one line and it was 1431, which is a number, so I yanked the last elf from the list, **added 1431** to his number and stuck him back in, with a total of 45147.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1098, which is a number, so I yanked the last elf from the list, **added 1098** to his number and stuck him back in, with a total of 1098.

I went over one line and it was 4751, which is a number, so I yanked the last elf from the list, **added 4751** to his number and stuck him back in, with a total of 5849.

I went over one line and it was 3778, which is a number, so I yanked the last elf from the list, **added 3778** to his number and stuck him back in, with a total of 9627.

I went over one line and it was 1188, which is a number, so I yanked the last elf from the list, **added 1188** to his number and stuck him back in, with a total of 10815.

I went over one line and it was 2895, which is a number, so I yanked the last elf from the list, **added 2895** to his number and stuck him back in, with a total of 13710.

I went over one line and it was 1855, which is a number, so I yanked the last elf from the list, **added 1855** to his number and stuck him back in, with a total of 15565.

I went over one line and it was 5950, which is a number, so I yanked the last elf from the list, **added 5950** to his number and stuck him back in, with a total of 21515.

I went over one line and it was 1761, which is a number, so I yanked the last elf from the list, **added 1761** to his number and stuck him back in, with a total of 23276.

I went over one line and it was 2264, which is a number, so I yanked the last elf from the list, **added 2264** to his number and stuck him back in, with a total of 25540.

I went over one line and it was 2581, which is a number, so I yanked the last elf from the list, **added 2581** to his number and stuck him back in, with a total of 28121.

I went over one line and it was 5002, which is a number, so I yanked the last elf from the list, **added 5002** to his number and stuck him back in, with a total of 33123.

I went over one line and it was 2820, which is a number, so I yanked the last elf from the list, **added 2820** to his number and stuck him back in, with a total of 35943.

I went over one line and it was 2688, which is a number, so I yanked the last elf from the list, **added 2688** to his number and stuck him back in, with a total of 38631.

I went over one line and it was 4309, which is a number, so I yanked the last elf from the list, **added 4309** to his number and stuck him back in, with a total of 42940.

I went over one line and it was 5021, which is a number, so I yanked the last elf from the list, **added 5021** to his number and stuck him back in, with a total of 47961.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5561, which is a number, so I yanked the last elf from the list, **added 5561** to his number and stuck him back in, with a total of 5561.

I went over one line and it was 4720, which is a number, so I yanked the last elf from the list, **added 4720** to his number and stuck him back in, with a total of 10281.

I went over one line and it was 8271, which is a number, so I yanked the last elf from the list, **added 8271** to his number and stuck him back in, with a total of 18552.

I went over one line and it was 2578, which is a number, so I yanked the last elf from the list, **added 2578** to his number and stuck him back in, with a total of 21130.

I went over one line and it was 5086, which is a number, so I yanked the last elf from the list, **added 5086** to his number and stuck him back in, with a total of 26216.

I went over one line and it was 5081, which is a number, so I yanked the last elf from the list, **added 5081** to his number and stuck him back in, with a total of 31297.

I went over one line and it was 9935, which is a number, so I yanked the last elf from the list, **added 9935** to his number and stuck him back in, with a total of 41232.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5993, which is a number, so I yanked the last elf from the list, **added 5993** to his number and stuck him back in, with a total of 5993.

I went over one line and it was 5237, which is a number, so I yanked the last elf from the list, **added 5237** to his number and stuck him back in, with a total of 11230.

I went over one line and it was 4986, which is a number, so I yanked the last elf from the list, **added 4986** to his number and stuck him back in, with a total of 16216.

I went over one line and it was 2470, which is a number, so I yanked the last elf from the list, **added 2470** to his number and stuck him back in, with a total of 18686.

I went over one line and it was 4081, which is a number, so I yanked the last elf from the list, **added 4081** to his number and stuck him back in, with a total of 22767.

I went over one line and it was 2107, which is a number, so I yanked the last elf from the list, **added 2107** to his number and stuck him back in, with a total of 24874.

I went over one line and it was 5118, which is a number, so I yanked the last elf from the list, **added 5118** to his number and stuck him back in, with a total of 29992.

I went over one line and it was 1436, which is a number, so I yanked the last elf from the list, **added 1436** to his number and stuck him back in, with a total of 31428.

I went over one line and it was 2722, which is a number, so I yanked the last elf from the list, **added 2722** to his number and stuck him back in, with a total of 34150.

I went over one line and it was 3317, which is a number, so I yanked the last elf from the list, **added 3317** to his number and stuck him back in, with a total of 37467.

I went over one line and it was 5135, which is a number, so I yanked the last elf from the list, **added 5135** to his number and stuck him back in, with a total of 42602.

I went over one line and it was 1687, which is a number, so I yanked the last elf from the list, **added 1687** to his number and stuck him back in, with a total of 44289.

I went over one line and it was 6081, which is a number, so I yanked the last elf from the list, **added 6081** to his number and stuck him back in, with a total of 50370.

I went over one line and it was 2281, which is a number, so I yanked the last elf from the list, **added 2281** to his number and stuck him back in, with a total of 52651.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2848, which is a number, so I yanked the last elf from the list, **added 2848** to his number and stuck him back in, with a total of 2848.

I went over one line and it was 10385, which is a number, so I yanked the last elf from the list, **added 10385** to his number and stuck him back in, with a total of 13233.

I went over one line and it was 11585, which is a number, so I yanked the last elf from the list, **added 11585** to his number and stuck him back in, with a total of 24818.

I went over one line and it was 8479, which is a number, so I yanked the last elf from the list, **added 8479** to his number and stuck him back in, with a total of 33297.

I went over one line and it was 7000, which is a number, so I yanked the last elf from the list, **added 7000** to his number and stuck him back in, with a total of 40297.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9106, which is a number, so I yanked the last elf from the list, **added 9106** to his number and stuck him back in, with a total of 9106.

I went over one line and it was 3499, which is a number, so I yanked the last elf from the list, **added 3499** to his number and stuck him back in, with a total of 12605.

I went over one line and it was 14806, which is a number, so I yanked the last elf from the list, **added 14806** to his number and stuck him back in, with a total of 27411.

I went over one line and it was 14856, which is a number, so I yanked the last elf from the list, **added 14856** to his number and stuck him back in, with a total of 42267.

I went over one line and it was 14270, which is a number, so I yanked the last elf from the list, **added 14270** to his number and stuck him back in, with a total of 56537.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10741, which is a number, so I yanked the last elf from the list, **added 10741** to his number and stuck him back in, with a total of 10741.

I went over one line and it was 4152, which is a number, so I yanked the last elf from the list, **added 4152** to his number and stuck him back in, with a total of 14893.

I went over one line and it was 1465, which is a number, so I yanked the last elf from the list, **added 1465** to his number and stuck him back in, with a total

of 16358.

I went over one line and it was 2692, which is a number, so I yanked the last elf from the list, **added 2692** to his number and stuck him back in, with a total of 19050.

I went over one line and it was 6622, which is a number, so I yanked the last elf from the list, **added 6622** to his number and stuck him back in, with a total of 25672.

I went over one line and it was 7357, which is a number, so I yanked the last elf from the list, **added 7357** to his number and stuck him back in, with a total of 33029.

I went over one line and it was 4795, which is a number, so I yanked the last elf from the list, **added 4795** to his number and stuck him back in, with a total of 37824.

I went over one line and it was 9761, which is a number, so I yanked the last elf from the list, **added 9761** to his number and stuck him back in, with a total of 47585.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8661, which is a number, so I yanked the last elf from the list, **added 8661** to his number and stuck him back in, with a total of 8661.

I went over one line and it was 15426, which is a number, so I yanked the last elf from the list, **added 15426** to his number and stuck him back in, with a total of 24087.

I went over one line and it was 4510, which is a number, so I yanked the last elf from the list, **added 4510** to his number and stuck him back in, with a total of 28597.

I went over one line and it was 16351, which is a number, so I yanked the last elf from the list, **added 16351** to his number and stuck him back in, with a total of 44948.

I went over one line and it was 9036, which is a number, so I yanked the last elf from the list, **added 9036** to his number and stuck him back in, with a total of 53984.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2728, which is a number, so I yanked the last elf from the list, **added 2728** to his number and stuck him back in, with a total of 2728.

I went over one line and it was 5277, which is a number, so I yanked the last elf from the list, **added 5277** to his number and stuck him back in, with a total of 8005.

I went over one line and it was 6437, which is a number, so I yanked the last elf from the list, **added 6437** to his number and stuck him back in, with a total of 14442.

I went over one line and it was 3607, which is a number, so I yanked the last elf from the list, **added 3607** to his number and stuck him back in, with a total of 18049.

I went over one line and it was 4858, which is a number, so I yanked the last elf from the list, **added 4858** to his number and stuck him back in, with a total of 22907.

I went over one line and it was 5174, which is a number, so I yanked the last elf from the list, **added 5174** to his number and stuck him back in, with a total of 28081.

I went over one line and it was 5124, which is a number, so I yanked the last elf from the list, **added 5124** to his number and stuck him back in, with a total of 33205.

I went over one line and it was 6278, which is a number, so I yanked the last elf from the list, **added 6278** to his number and stuck him back in, with a total of 39483.

I went over one line and it was 4115, which is a number, so I yanked the last elf from the list, **added 4115** to his number and stuck him back in, with a total of 43598.

I went over one line and it was 3943, which is a number, so I yanked the last elf from the list, **added 3943** to his number and stuck him back in, with a total of 47541.

I went over one line and it was 2548, which is a number, so I yanked the last elf from the list, **added 2548** to his number and stuck him back in, with a total of 50089.

I went over one line and it was 4946, which is a number, so I yanked the last elf from the list, **added 4946** to his number and stuck him back in, with a total

of 55035.

I went over one line and it was 5169, which is a number, so I yanked the last elf from the list, **added 5169** to his number and stuck him back in, with a total of 60204.

I went over one line and it was 4707, which is a number, so I yanked the last elf from the list, **added 4707** to his number and stuck him back in, with a total of 64911.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 61072, which is a number, so I yanked the last elf from the list, **added 61072** to his number and stuck him back in, with a total of 61072.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9226, which is a number, so I yanked the last elf from the list, **added 9226** to his number and stuck him back in, with a total of 9226.

I went over one line and it was 2700, which is a number, so I yanked the last elf from the list, **added 2700** to his number and stuck him back in, with a total of 11926.

I went over one line and it was 4012, which is a number, so I yanked the last elf from the list, **added 4012** to his number and stuck him back in, with a total of 15938.

I went over one line and it was 8201, which is a number, so I yanked the last elf from the list, **added 8201** to his number and stuck him back in, with a total of 24139.

I went over one line and it was 9552, which is a number, so I yanked the last elf from the list, **added 9552** to his number and stuck him back in, with a total of 33691.

I went over one line and it was 3895, which is a number, so I yanked the last elf from the list, **added 3895** to his number and stuck him back in, with a total of 37586.

I went over one line and it was 8835, which is a number, so I yanked the last elf from the list, **added 8835** to his number and stuck him back in, with a total of 46421.

I went over one line and it was 2748, which is a number, so I yanked the last elf from the list, **added 2748** to his number and stuck him back in, with a total of 49169.

I went over one line and it was 9567, which is a number, so I yanked the last elf from the list, **added 9567** to his number and stuck him back in, with a total of 58736.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10717, which is a number, so I yanked the last elf from the list, **added 10717** to his number and stuck him back in, with a total of 10717.

I went over one line and it was 1581, which is a number, so I yanked the last elf from the list, **added 1581** to his number and stuck him back in, with a total of 12298.

I went over one line and it was 10024, which is a number, so I yanked the last elf from the list, **added 10024** to his number and stuck him back in, with a total of 22322.

I went over one line and it was 6404, which is a number, so I yanked the last elf from the list, **added 6404** to his number and stuck him back in, with a total of 28726.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5376, which is a number, so I yanked the last elf from the list, **added 5376** to his number and stuck him back in, with a total of 5376.

I went over one line and it was 1151, which is a number, so I yanked the last elf from the list, **added 1151** to his number and stuck him back in, with a total of 6527.

I went over one line and it was 3132, which is a number, so I yanked the last elf from the list, **added 3132** to his number and stuck him back in, with a total of 9659.

I went over one line and it was 5017, which is a number, so I yanked the last elf from the list, **added 5017** to his number and stuck him back in, with a total of 14676.

I went over one line and it was 5373, which is a number, so I yanked the last elf from the list, **added 5373** to his number and stuck him back in, with a total

of 20049.

I went over one line and it was 4282, which is a number, so I yanked the last elf from the list, **added 4282** to his number and stuck him back in, with a total of 24331.

I went over one line and it was 3484, which is a number, so I yanked the last elf from the list, **added 3484** to his number and stuck him back in, with a total of 27815.

I went over one line and it was 5596, which is a number, so I yanked the last elf from the list, **added 5596** to his number and stuck him back in, with a total of 33411.

I went over one line and it was 4456, which is a number, so I yanked the last elf from the list, **added 4456** to his number and stuck him back in, with a total of 37867.

I went over one line and it was 6121, which is a number, so I yanked the last elf from the list, **added 6121** to his number and stuck him back in, with a total of 43988.

I went over one line and it was 2714, which is a number, so I yanked the last elf from the list, **added 2714** to his number and stuck him back in, with a total of 46702.

I went over one line and it was 6212, which is a number, so I yanked the last elf from the list, **added 6212** to his number and stuck him back in, with a total of 52914.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 27894, which is a number, so I yanked the last elf from the list, **added 27894** to his number and stuck him back in, with a total of 27894.

I went over one line and it was 35903, which is a number, so I yanked the last elf from the list, **added 35903** to his number and stuck him back in, with a total of 63797.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4917, which is a number, so I yanked the last elf from the list, **added 4917** to his number and stuck him back in, with a total of 4917.

I went over one line and it was 8413, which is a number, so I yanked the last elf from the list, **added 8413** to his number and stuck him back in, with a total of 13330.

I went over one line and it was 2371, which is a number, so I yanked the last elf from the list, **added 2371** to his number and stuck him back in, with a total of 15701.

I went over one line and it was 5101, which is a number, so I yanked the last elf from the list, **added 5101** to his number and stuck him back in, with a total of 20802.

I went over one line and it was 6183, which is a number, so I yanked the last elf from the list, **added 6183** to his number and stuck him back in, with a total of 26985.

I went over one line and it was 2951, which is a number, so I yanked the last elf from the list, **added 2951** to his number and stuck him back in, with a total of 29936.

I went over one line and it was 2248, which is a number, so I yanked the last elf from the list, **added 2248** to his number and stuck him back in, with a total of 32184.

I went over one line and it was 8656, which is a number, so I yanked the last elf from the list, **added 8656** to his number and stuck him back in, with a total of 40840.

I went over one line and it was 9266, which is a number, so I yanked the last elf from the list, **added 9266** to his number and stuck him back in, with a total of 50106.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2625, which is a number, so I yanked the last elf from the list, **added 2625** to his number and stuck him back in, with a total of 2625.

I went over one line and it was 6275, which is a number, so I yanked the last elf from the list, **added 6275** to his number and stuck him back in, with a total of 8900.

I went over one line and it was 7478, which is a number, so I yanked the last elf from the list, **added 7478** to his number and stuck him back in, with a total of 16378.

I went over one line and it was 4337, which is a number, so I yanked the last elf from the list, **added 4337** to his number and stuck him back in, with a total of 20715.

I went over one line and it was 1541, which is a number, so I yanked the last elf from the list, **added 1541** to his number and stuck him back in, with a total of 22256.

I went over one line and it was 1213, which is a number, so I yanked the last elf from the list, **added 1213** to his number and stuck him back in, with a total of 23469.

I went over one line and it was 3955, which is a number, so I yanked the last elf from the list, **added 3955** to his number and stuck him back in, with a total of 27424.

I went over one line and it was 4757, which is a number, so I yanked the last elf from the list, **added 4757** to his number and stuck him back in, with a total of 32181.

I went over one line and it was 8046, which is a number, so I yanked the last elf from the list, **added 8046** to his number and stuck him back in, with a total of 40227.

I went over one line and it was 7255, which is a number, so I yanked the last elf from the list, **added 7255** to his number and stuck him back in, with a total of 47482.

I went over one line and it was 1971, which is a number, so I yanked the last elf from the list, **added 1971** to his number and stuck him back in, with a total of 49453.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2777, which is a number, so I yanked the last elf from the list, **added 2777** to his number and stuck him back in, with a total of 2777.

I went over one line and it was 2409, which is a number, so I yanked the last elf from the list, **added 2409** to his number and stuck him back in, with a total of 5186.

I went over one line and it was 2353, which is a number, so I yanked the last elf from the list, **added 2353** to his number and stuck him back in, with a total of 7539.

I went over one line and it was 5879, which is a number, so I yanked the last elf from the list, **added 5879** to his number and stuck him back in, with a total of 13418.

I went over one line and it was 5503, which is a number, so I yanked the last elf from the list, **added 5503** to his number and stuck him back in, with a total of 18921.

I went over one line and it was 4098, which is a number, so I yanked the last elf from the list, **added 4098** to his number and stuck him back in, with a total of 23019.

I went over one line and it was 2158, which is a number, so I yanked the last elf from the list, **added 2158** to his number and stuck him back in, with a total of 25177.

I went over one line and it was 3969, which is a number, so I yanked the last elf from the list, **added 3969** to his number and stuck him back in, with a total of 29146.

I went over one line and it was 1368, which is a number, so I yanked the last elf from the list, **added 1368** to his number and stuck him back in, with a total of 30514.

I went over one line and it was 4135, which is a number, so I yanked the last elf from the list, **added 4135** to his number and stuck him back in, with a total of 34649.

I went over one line and it was 1226, which is a number, so I yanked the last elf from the list, **added 1226** to his number and stuck him back in, with a total of 35875.

I went over one line and it was 1285, which is a number, so I yanked the last elf from the list, **added 1285** to his number and stuck him back in, with a total of 37160.

I went over one line and it was 4840, which is a number, so I yanked the last elf from the list, **added 4840** to his number and stuck him back in, with a total of 42000.

I went over one line and it was 2038, which is a number, so I yanked the last elf from the list, **added 2038** to his number and stuck him back in, with a total of 44038.

I went over one line and it was 1757, which is a number, so I yanked the last elf from the list, **added 1757** to his number and stuck him back in, with a total

of 45795.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8863, which is a number, so I yanked the last elf from the list, **added 8863** to his number and stuck him back in, with a total of 8863.

I went over one line and it was 9589, which is a number, so I yanked the last elf from the list, **added 9589** to his number and stuck him back in, with a total of 18452.

I went over one line and it was 3253, which is a number, so I yanked the last elf from the list, **added 3253** to his number and stuck him back in, with a total of 21705.

I went over one line and it was 5275, which is a number, so I yanked the last elf from the list, **added 5275** to his number and stuck him back in, with a total of 26980.

I went over one line and it was 7203, which is a number, so I yanked the last elf from the list, **added 7203** to his number and stuck him back in, with a total of 34183.

I went over one line and it was 7360, which is a number, so I yanked the last elf from the list, **added 7360** to his number and stuck him back in, with a total of 41543.

I went over one line and it was 9066, which is a number, so I yanked the last elf from the list, **added 9066** to his number and stuck him back in, with a total of 50609.

I went over one line and it was 8794, which is a number, so I yanked the last elf from the list, **added 8794** to his number and stuck him back in, with a total of 59403.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1470, which is a number, so I yanked the last elf from the list, **added 1470** to his number and stuck him back in, with a total of 1470.

I went over one line and it was 7260, which is a number, so I yanked the last elf from the list, **added 7260** to his number and stuck him back in, with a total of 8730.

I went over one line and it was 2185, which is a number, so I yanked the last elf from the list, **added 2185** to his number and stuck him back in, with a total of 10915.

I went over one line and it was 3035, which is a number, so I yanked the last elf from the list, **added 3035** to his number and stuck him back in, with a total of 13950.

I went over one line and it was 5968, which is a number, so I yanked the last elf from the list, **added 5968** to his number and stuck him back in, with a total of 19918.

I went over one line and it was 7504, which is a number, so I yanked the last elf from the list, **added 7504** to his number and stuck him back in, with a total of 27422.

I went over one line and it was 8342, which is a number, so I yanked the last elf from the list, **added 8342** to his number and stuck him back in, with a total of 35764.

I went over one line and it was 5621, which is a number, so I yanked the last elf from the list, **added 5621** to his number and stuck him back in, with a total of 41385.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10611, which is a number, so I yanked the last elf from the list, **added 10611** to his number and stuck him back in, with a total of 10611.

I went over one line and it was 7460, which is a number, so I yanked the last elf from the list, **added 7460** to his number and stuck him back in, with a total of 18071.

I went over one line and it was 3736, which is a number, so I yanked the last elf from the list, **added 3736** to his number and stuck him back in, with a total of 21807.

I went over one line and it was 4146, which is a number, so I yanked the last elf from the list, **added 4146** to his number and stuck him back in, with a total of 25953.

I went over one line and it was 10173, which is a number, so I yanked the last elf from the list, **added 10173** to his number and stuck him back in, with a total of 36126.

I went over one line and it was 12291, which is a number, so I yanked the last elf from the list, **added 12291** to his number and stuck him back in, with a total of 48417.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3680, which is a number, so I yanked the last elf from the list, **added 3680** to his number and stuck him back in, with a total of 3680.

I went over one line and it was 12376, which is a number, so I yanked the last elf from the list, **added 12376** to his number and stuck him back in, with a total of 16056.

I went over one line and it was 13226, which is a number, so I yanked the last elf from the list, **added 13226** to his number and stuck him back in, with a total of 29282.

I went over one line and it was 1889, which is a number, so I yanked the last elf from the list, **added 1889** to his number and stuck him back in, with a total of 31171.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3439, which is a number, so I yanked the last elf from the list, **added 3439** to his number and stuck him back in, with a total of 3439.

I went over one line and it was 7329, which is a number, so I yanked the last elf from the list, **added 7329** to his number and stuck him back in, with a total of 10768.

I went over one line and it was 3377, which is a number, so I yanked the last elf from the list, **added 3377** to his number and stuck him back in, with a total of 14145.

I went over one line and it was 6639, which is a number, so I yanked the last elf from the list, **added 6639** to his number and stuck him back in, with a total of 20784.

I went over one line and it was 6283, which is a number, so I yanked the last elf from the list, **added 6283** to his number and stuck him back in, with a total of 27067.

I went over one line and it was 2887, which is a number, so I yanked the last elf from the list, **added 2887** to his number and stuck him back in, with a total

of 29954.

I went over one line and it was 2653, which is a number, so I yanked the last elf from the list, **added 2653** to his number and stuck him back in, with a total of 32607.

I went over one line and it was 3499, which is a number, so I yanked the last elf from the list, **added 3499** to his number and stuck him back in, with a total of 36106.

I went over one line and it was 3625, which is a number, so I yanked the last elf from the list, **added 3625** to his number and stuck him back in, with a total of 39731.

I went over one line and it was 6361, which is a number, so I yanked the last elf from the list, **added 6361** to his number and stuck him back in, with a total of 46092.

I went over one line and it was 3250, which is a number, so I yanked the last elf from the list, **added 3250** to his number and stuck him back in, with a total of 49342.

I went over one line and it was 6882, which is a number, so I yanked the last elf from the list, **added 6882** to his number and stuck him back in, with a total of 56224.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7470, which is a number, so I yanked the last elf from the list, **added 7470** to his number and stuck him back in, with a total of 7470.

I went over one line and it was 4047, which is a number, so I yanked the last elf from the list, **added 4047** to his number and stuck him back in, with a total of 11517.

I went over one line and it was 1714, which is a number, so I yanked the last elf from the list, **added 1714** to his number and stuck him back in, with a total of 13231.

I went over one line and it was 6357, which is a number, so I yanked the last elf from the list, **added 6357** to his number and stuck him back in, with a total of 19588.

I went over one line and it was 5267, which is a number, so I yanked the last elf from the list, **added 5267** to his number and stuck him back in, with a total

of 24855.

I went over one line and it was 7577, which is a number, so I yanked the last elf from the list, **added 7577** to his number and stuck him back in, with a total of 32432.

I went over one line and it was 3495, which is a number, so I yanked the last elf from the list, **added 3495** to his number and stuck him back in, with a total of 35927.

I went over one line and it was 6565, which is a number, so I yanked the last elf from the list, **added 6565** to his number and stuck him back in, with a total of 42492.

I went over one line and it was 2349, which is a number, so I yanked the last elf from the list, **added 2349** to his number and stuck him back in, with a total of 44841.

I went over one line and it was 3850, which is a number, so I yanked the last elf from the list, **added 3850** to his number and stuck him back in, with a total of 48691.

I went over one line and it was 1759, which is a number, so I yanked the last elf from the list, **added 1759** to his number and stuck him back in, with a total of 50450.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8099, which is a number, so I yanked the last elf from the list, **added 8099** to his number and stuck him back in, with a total of 8099.

I went over one line and it was 8009, which is a number, so I yanked the last elf from the list, **added 8009** to his number and stuck him back in, with a total of 16108.

I went over one line and it was 19118, which is a number, so I yanked the last elf from the list, **added 19118** to his number and stuck him back in, with a total of 35226.

I went over one line and it was 14120, which is a number, so I yanked the last elf from the list, **added 14120** to his number and stuck him back in, with a total of 49346.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2826, which is a number, so I yanked the last elf from the list, **added 2826** to his number and stuck him back in, with a total of 2826.

I went over one line and it was 7174, which is a number, so I yanked the last elf from the list, **added 7174** to his number and stuck him back in, with a total of 10000.

I went over one line and it was 2774, which is a number, so I yanked the last elf from the list, **added 2774** to his number and stuck him back in, with a total of 12774.

I went over one line and it was 2989, which is a number, so I yanked the last elf from the list, **added 2989** to his number and stuck him back in, with a total of 15763.

I went over one line and it was 7176, which is a number, so I yanked the last elf from the list, **added 7176** to his number and stuck him back in, with a total of 22939.

I went over one line and it was 7625, which is a number, so I yanked the last elf from the list, **added 7625** to his number and stuck him back in, with a total of 30564.

I went over one line and it was 3899, which is a number, so I yanked the last elf from the list, **added 3899** to his number and stuck him back in, with a total of 34463.

I went over one line and it was 4002, which is a number, so I yanked the last elf from the list, **added 4002** to his number and stuck him back in, with a total of 38465.

I went over one line and it was 4849, which is a number, so I yanked the last elf from the list, **added 4849** to his number and stuck him back in, with a total of 43314.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7983, which is a number, so I yanked the last elf from the list, **added 7983** to his number and stuck him back in, with a total of 7983.

I went over one line and it was 10730, which is a number, so I yanked the last elf from the list, **added 10730** to his number and stuck him back in, with a total of 18713.

I went over one line and it was 2709, which is a number, so I yanked the last elf from the list, **added 2709** to his number and stuck him back in, with a total of 21422.

I went over one line and it was 4285, which is a number, so I yanked the last elf from the list, **added 4285** to his number and stuck him back in, with a total of 25707.

I went over one line and it was 12607, which is a number, so I yanked the last elf from the list, **added 12607** to his number and stuck him back in, with a total of 38314.

I went over one line and it was 7955, which is a number, so I yanked the last elf from the list, **added 7955** to his number and stuck him back in, with a total of 46269.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 13822, which is a number, so I yanked the last elf from the list, **added 13822** to his number and stuck him back in, with a total of 13822.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1234, which is a number, so I yanked the last elf from the list, **added 1234** to his number and stuck him back in, with a total of 1234.

I went over one line and it was 4277, which is a number, so I yanked the last elf from the list, **added 4277** to his number and stuck him back in, with a total of 5511.

I went over one line and it was 2621, which is a number, so I yanked the last elf from the list, **added 2621** to his number and stuck him back in, with a total of 8132.

I went over one line and it was 2723, which is a number, so I yanked the last elf from the list, **added 2723** to his number and stuck him back in, with a total of 10855.

I went over one line and it was 6879, which is a number, so I yanked the last elf from the list, **added 6879** to his number and stuck him back in, with a total of 17734.

I went over one line and it was 4385, which is a number, so I yanked the last elf from the list, **added 4385** to his number and stuck him back in, with a total

of 22119.

I went over one line and it was 2232, which is a number, so I yanked the last elf from the list, **added 2232** to his number and stuck him back in, with a total of 24351.

I went over one line and it was 5996, which is a number, so I yanked the last elf from the list, **added 5996** to his number and stuck him back in, with a total of 30347.

I went over one line and it was 5136, which is a number, so I yanked the last elf from the list, **added 5136** to his number and stuck him back in, with a total of 35483.

I went over one line and it was 3369, which is a number, so I yanked the last elf from the list, **added 3369** to his number and stuck him back in, with a total of 38852.

I went over one line and it was 7149, which is a number, so I yanked the last elf from the list, **added 7149** to his number and stuck him back in, with a total of 46001.

I went over one line and it was 2219, which is a number, so I yanked the last elf from the list, **added 2219** to his number and stuck him back in, with a total of 48220.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 66306, which is a number, so I yanked the last elf from the list, **added 66306** to his number and stuck him back in, with a total of 66306.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5829, which is a number, so I yanked the last elf from the list, **added 5829** to his number and stuck him back in, with a total of 5829.

I went over one line and it was 6255, which is a number, so I yanked the last elf from the list, **added 6255** to his number and stuck him back in, with a total of 12084.

I went over one line and it was 4929, which is a number, so I yanked the last elf from the list, **added 4929** to his number and stuck him back in, with a total of 17013.

I went over one line and it was 8250, which is a number, so I yanked the last elf from the list, **added 8250** to his number and stuck him back in, with a total of 25263.

I went over one line and it was 3516, which is a number, so I yanked the last elf from the list, **added 3516** to his number and stuck him back in, with a total of 28779.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4857, which is a number, so I yanked the last elf from the list, **added 4857** to his number and stuck him back in, with a total of 4857.

I went over one line and it was 6895, which is a number, so I yanked the last elf from the list, **added 6895** to his number and stuck him back in, with a total of 11752.

I went over one line and it was 4273, which is a number, so I yanked the last elf from the list, **added 4273** to his number and stuck him back in, with a total of 16025.

I went over one line and it was 7081, which is a number, so I yanked the last elf from the list, **added 7081** to his number and stuck him back in, with a total of 23106.

I went over one line and it was 2989, which is a number, so I yanked the last elf from the list, **added 2989** to his number and stuck him back in, with a total of 26095.

I went over one line and it was 5846, which is a number, so I yanked the last elf from the list, **added 5846** to his number and stuck him back in, with a total of 31941.

I went over one line and it was 2961, which is a number, so I yanked the last elf from the list, **added 2961** to his number and stuck him back in, with a total of 34902.

I went over one line and it was 7846, which is a number, so I yanked the last elf from the list, **added 7846** to his number and stuck him back in, with a total of 42748.

I went over one line and it was 2255, which is a number, so I yanked the last elf from the list, **added 2255** to his number and stuck him back in, with a total of 45003.

I went over one line and it was 4802, which is a number, so I yanked the last elf from the list, **added 4802** to his number and stuck him back in, with a total of 49805.

I went over one line and it was 1670, which is a number, so I yanked the last elf from the list, **added 1670** to his number and stuck him back in, with a total of 51475.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8191, which is a number, so I yanked the last elf from the list, **added 8191** to his number and stuck him back in, with a total of 8191.

I went over one line and it was 1267, which is a number, so I yanked the last elf from the list, **added 1267** to his number and stuck him back in, with a total of 9458.

I went over one line and it was 6985, which is a number, so I yanked the last elf from the list, **added 6985** to his number and stuck him back in, with a total of 16443.

I went over one line and it was 4747, which is a number, so I yanked the last elf from the list, **added 4747** to his number and stuck him back in, with a total of 21190.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6734, which is a number, so I yanked the last elf from the list, **added 6734** to his number and stuck him back in, with a total of 6734.

I went over one line and it was 4762, which is a number, so I yanked the last elf from the list, **added 4762** to his number and stuck him back in, with a total of 11496.

I went over one line and it was 1304, which is a number, so I yanked the last elf from the list, **added 1304** to his number and stuck him back in, with a total of 12800.

I went over one line and it was 7783, which is a number, so I yanked the last elf from the list, **added 7783** to his number and stuck him back in, with a total of 20583.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7646, which is a number, so I yanked the last elf from the list, **added 7646** to his number and stuck him back in, with a total of 7646.

I went over one line and it was 1419, which is a number, so I yanked the last elf from the list, **added 1419** to his number and stuck him back in, with a total of 9065.

I went over one line and it was 3729, which is a number, so I yanked the last elf from the list, **added 3729** to his number and stuck him back in, with a total of 12794.

I went over one line and it was 7973, which is a number, so I yanked the last elf from the list, **added 7973** to his number and stuck him back in, with a total of 20767.

I went over one line and it was 3350, which is a number, so I yanked the last elf from the list, **added 3350** to his number and stuck him back in, with a total of 24117.

I went over one line and it was 5737, which is a number, so I yanked the last elf from the list, **added 5737** to his number and stuck him back in, with a total of 29854.

I went over one line and it was 3883, which is a number, so I yanked the last elf from the list, **added 3883** to his number and stuck him back in, with a total of 33737.

I went over one line and it was 1428, which is a number, so I yanked the last elf from the list, **added 1428** to his number and stuck him back in, with a total of 35165.

I went over one line and it was 5432, which is a number, so I yanked the last elf from the list, **added 5432** to his number and stuck him back in, with a total of 40597.

I went over one line and it was 4835, which is a number, so I yanked the last elf from the list, **added 4835** to his number and stuck him back in, with a total of 45432.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 13785, which is a number, so I yanked the last elf from the list, **added 13785** to his number and stuck him back in, with a total of 13785.

I went over one line and it was 12814, which is a number, so I yanked the last elf from the list, **added 12814** to his number and stuck him back in, with a total of 26599.

I went over one line and it was 5626, which is a number, so I yanked the last elf from the list, **added 5626** to his number and stuck him back in, with a total of 32225.

I went over one line and it was 11147, which is a number, so I yanked the last elf from the list, **added 11147** to his number and stuck him back in, with a total of 43372.

I went over one line and it was 5700, which is a number, so I yanked the last elf from the list, **added 5700** to his number and stuck him back in, with a total of 49072.

I went over one line and it was 9402, which is a number, so I yanked the last elf from the list, **added 9402** to his number and stuck him back in, with a total of 58474.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3500, which is a number, so I yanked the last elf from the list, **added 3500** to his number and stuck him back in, with a total of 3500.

I went over one line and it was 9350, which is a number, so I yanked the last elf from the list, **added 9350** to his number and stuck him back in, with a total of 12850.

I went over one line and it was 11011, which is a number, so I yanked the last elf from the list, **added 11011** to his number and stuck him back in, with a total of 23861.

I went over one line and it was 8174, which is a number, so I yanked the last elf from the list, **added 8174** to his number and stuck him back in, with a total of 32035.

I went over one line and it was 9828, which is a number, so I yanked the last elf from the list, **added 9828** to his number and stuck him back in, with a total of 41863.

I went over one line and it was 6832, which is a number, so I yanked the last elf from the list, **added 6832** to his number and stuck him back in, with a total of 48695.

I went over one line and it was 1068, which is a number, so I yanked the last elf from the list, **added 1068** to his number and stuck him back in, with a total of 49763.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 40289, which is a number, so I yanked the last elf from the list, **added 40289** to his number and stuck him back in, with a total of 40289.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5599, which is a number, so I yanked the last elf from the list, **added 5599** to his number and stuck him back in, with a total of 5599.

I went over one line and it was 4191, which is a number, so I yanked the last elf from the list, **added 4191** to his number and stuck him back in, with a total of 9790.

I went over one line and it was 3625, which is a number, so I yanked the last elf from the list, **added 3625** to his number and stuck him back in, with a total of 13415.

I went over one line and it was 8604, which is a number, so I yanked the last elf from the list, **added 8604** to his number and stuck him back in, with a total of 22019.

I went over one line and it was 1087, which is a number, so I yanked the last elf from the list, **added 1087** to his number and stuck him back in, with a total of 23106.

I went over one line and it was 6751, which is a number, so I yanked the last elf from the list, **added 6751** to his number and stuck him back in, with a total of 29857.

I went over one line and it was 6020, which is a number, so I yanked the last elf from the list, **added 6020** to his number and stuck him back in, with a total of 35877.

I went over one line and it was 7519, which is a number, so I yanked the last elf from the list, **added 7519** to his number and stuck him back in, with a total of 43396.

I went over one line and it was 7000, which is a number, so I yanked the last elf from the list, **added 7000** to his number and stuck him back in, with a total

of 50396.

I went over one line and it was 1554, which is a number, so I yanked the last elf from the list, **added 1554** to his number and stuck him back in, with a total of 51950.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 31342, which is a number, so I yanked the last elf from the list, **added 31342** to his number and stuck him back in, with a total of 31342.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6840, which is a number, so I yanked the last elf from the list, **added 6840** to his number and stuck him back in, with a total of 6840.

I went over one line and it was 2096, which is a number, so I yanked the last elf from the list, **added 2096** to his number and stuck him back in, with a total of 8936.

I went over one line and it was 2482, which is a number, so I yanked the last elf from the list, **added 2482** to his number and stuck him back in, with a total of 11418.

I went over one line and it was 8269, which is a number, so I yanked the last elf from the list, **added 8269** to his number and stuck him back in, with a total of 19687.

I went over one line and it was 3005, which is a number, so I yanked the last elf from the list, **added 3005** to his number and stuck him back in, with a total of 22692.

I went over one line and it was 6414, which is a number, so I yanked the last elf from the list, **added 6414** to his number and stuck him back in, with a total of 29106.

I went over one line and it was 3823, which is a number, so I yanked the last elf from the list, **added 3823** to his number and stuck him back in, with a total of 32929.

I went over one line and it was 6976, which is a number, so I yanked the last elf from the list, **added 6976** to his number and stuck him back in, with a total of 39905.

I went over one line and it was 9302, which is a number, so I yanked the last elf from the list, **added 9302** to his number and stuck him back in, with a total of 49207.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7401, which is a number, so I yanked the last elf from the list, **added 7401** to his number and stuck him back in, with a total of 7401.

I went over one line and it was 2825, which is a number, so I yanked the last elf from the list, **added 2825** to his number and stuck him back in, with a total of 10226.

I went over one line and it was 6693, which is a number, so I yanked the last elf from the list, **added 6693** to his number and stuck him back in, with a total of 16919.

I went over one line and it was 3785, which is a number, so I yanked the last elf from the list, **added 3785** to his number and stuck him back in, with a total of 20704.

I went over one line and it was 3653, which is a number, so I yanked the last elf from the list, **added 3653** to his number and stuck him back in, with a total of 24357.

I went over one line and it was 1608, which is a number, so I yanked the last elf from the list, **added 1608** to his number and stuck him back in, with a total of 25965.

I went over one line and it was 5157, which is a number, so I yanked the last elf from the list, **added 5157** to his number and stuck him back in, with a total of 31122.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3109, which is a number, so I yanked the last elf from the list, **added 3109** to his number and stuck him back in, with a total of 3109.

I went over one line and it was 1332, which is a number, so I yanked the last elf from the list, **added 1332** to his number and stuck him back in, with a total of 4441.

I went over one line and it was 3032, which is a number, so I yanked the last elf from the list, **added 3032** to his number and stuck him back in, with a total

of 7473.

I went over one line and it was 6908, which is a number, so I yanked the last elf from the list, **added 6908** to his number and stuck him back in, with a total of 14381.

I went over one line and it was 2446, which is a number, so I yanked the last elf from the list, **added 2446** to his number and stuck him back in, with a total of 16827.

I went over one line and it was 6437, which is a number, so I yanked the last elf from the list, **added 6437** to his number and stuck him back in, with a total of 23264.

I went over one line and it was 1527, which is a number, so I yanked the last elf from the list, **added 1527** to his number and stuck him back in, with a total of 24791.

I went over one line and it was 2876, which is a number, so I yanked the last elf from the list, **added 2876** to his number and stuck him back in, with a total of 27667.

I went over one line and it was 3124, which is a number, so I yanked the last elf from the list, **added 3124** to his number and stuck him back in, with a total of 30791.

I went over one line and it was 5905, which is a number, so I yanked the last elf from the list, **added 5905** to his number and stuck him back in, with a total of 36696.

I went over one line and it was 3888, which is a number, so I yanked the last elf from the list, **added 3888** to his number and stuck him back in, with a total of 40584.

I went over one line and it was 1027, which is a number, so I yanked the last elf from the list, **added 1027** to his number and stuck him back in, with a total of 41611.

I went over one line and it was 2056, which is a number, so I yanked the last elf from the list, **added 2056** to his number and stuck him back in, with a total of 43667.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 13859, which is a number, so I yanked the last elf from the list, **added 13859** to his number and stuck him back in, with

a total of 13859.

I went over one line and it was 19777, which is a number, so I yanked the last elf from the list, **added 19777** to his number and stuck him back in, with a total of 33636.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2156, which is a number, so I yanked the last elf from the list, **added 2156** to his number and stuck him back in, with a total of 2156.

I went over one line and it was 5880, which is a number, so I yanked the last elf from the list, **added 5880** to his number and stuck him back in, with a total of 8036.

I went over one line and it was 5299, which is a number, so I yanked the last elf from the list, **added 5299** to his number and stuck him back in, with a total of 13335.

I went over one line and it was 8558, which is a number, so I yanked the last elf from the list, **added 8558** to his number and stuck him back in, with a total of 21893.

I went over one line and it was 1170, which is a number, so I yanked the last elf from the list, **added 1170** to his number and stuck him back in, with a total of 23063.

I went over one line and it was 8369, which is a number, so I yanked the last elf from the list, **added 8369** to his number and stuck him back in, with a total of 31432.

I went over one line and it was 2384, which is a number, so I yanked the last elf from the list, **added 2384** to his number and stuck him back in, with a total of 33816.

I went over one line and it was 4922, which is a number, so I yanked the last elf from the list, **added 4922** to his number and stuck him back in, with a total of 38738.

I went over one line and it was 3540, which is a number, so I yanked the last elf from the list, **added 3540** to his number and stuck him back in, with a total of 42278.

I went over one line and it was 4069, which is a number, so I yanked the last elf from the list, **added 4069** to his number and stuck him back in, with a total

of 46347.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2520, which is a number, so I yanked the last elf from the list, **added 2520** to his number and stuck him back in, with a total of 2520.

I went over one line and it was 8578, which is a number, so I yanked the last elf from the list, **added 8578** to his number and stuck him back in, with a total of 11098.

I went over one line and it was 6988, which is a number, so I yanked the last elf from the list, **added 6988** to his number and stuck him back in, with a total of 18086.

I went over one line and it was 4589, which is a number, so I yanked the last elf from the list, **added 4589** to his number and stuck him back in, with a total of 22675.

I went over one line and it was 2808, which is a number, so I yanked the last elf from the list, **added 2808** to his number and stuck him back in, with a total of 25483.

I went over one line and it was 8622, which is a number, so I yanked the last elf from the list, **added 8622** to his number and stuck him back in, with a total of 34105.

I went over one line and it was 7274, which is a number, so I yanked the last elf from the list, **added 7274** to his number and stuck him back in, with a total of 41379.

I went over one line and it was 1485, which is a number, so I yanked the last elf from the list, **added 1485** to his number and stuck him back in, with a total of 42864.

I went over one line and it was 3425, which is a number, so I yanked the last elf from the list, **added 3425** to his number and stuck him back in, with a total of 46289.

I went over one line and it was 2048, which is a number, so I yanked the last elf from the list, **added 2048** to his number and stuck him back in, with a total of 48337.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1975, which is a number, so I yanked the last elf from the list, **added 1975** to his number and stuck him back in, with a total of 1975.

I went over one line and it was 7298, which is a number, so I yanked the last elf from the list, **added 7298** to his number and stuck him back in, with a total of 9273.

I went over one line and it was 4361, which is a number, so I yanked the last elf from the list, **added 4361** to his number and stuck him back in, with a total of 13634.

I went over one line and it was 2127, which is a number, so I yanked the last elf from the list, **added 2127** to his number and stuck him back in, with a total of 15761.

I went over one line and it was 5352, which is a number, so I yanked the last elf from the list, **added 5352** to his number and stuck him back in, with a total of 21113.

I went over one line and it was 6143, which is a number, so I yanked the last elf from the list, **added 6143** to his number and stuck him back in, with a total of 27256.

I went over one line and it was 5553, which is a number, so I yanked the last elf from the list, **added 5553** to his number and stuck him back in, with a total of 32809.

I went over one line and it was 6939, which is a number, so I yanked the last elf from the list, **added 6939** to his number and stuck him back in, with a total of 39748.

I went over one line and it was 1970, which is a number, so I yanked the last elf from the list, **added 1970** to his number and stuck him back in, with a total of 41718.

I went over one line and it was 4892, which is a number, so I yanked the last elf from the list, **added 4892** to his number and stuck him back in, with a total of 46610.

I went over one line and it was 1193, which is a number, so I yanked the last elf from the list, **added 1193** to his number and stuck him back in, with a total of 47803.

I went over one line and it was 2763, which is a number, so I yanked the last elf from the list, **added 2763** to his number and stuck him back in, with a total

of 50566.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2681, which is a number, so I yanked the last elf from the list, **added 2681** to his number and stuck him back in, with a total of 2681.

I went over one line and it was 5649, which is a number, so I yanked the last elf from the list, **added 5649** to his number and stuck him back in, with a total of 8330.

I went over one line and it was 3986, which is a number, so I yanked the last elf from the list, **added 3986** to his number and stuck him back in, with a total of 12316.

I went over one line and it was 3879, which is a number, so I yanked the last elf from the list, **added 3879** to his number and stuck him back in, with a total of 16195.

I went over one line and it was 1710, which is a number, so I yanked the last elf from the list, **added 1710** to his number and stuck him back in, with a total of 17905.

I went over one line and it was 1749, which is a number, so I yanked the last elf from the list, **added 1749** to his number and stuck him back in, with a total of 19654.

I went over one line and it was 5178, which is a number, so I yanked the last elf from the list, **added 5178** to his number and stuck him back in, with a total of 24832.

I went over one line and it was 5919, which is a number, so I yanked the last elf from the list, **added 5919** to his number and stuck him back in, with a total of 30751.

I went over one line and it was 6788, which is a number, so I yanked the last elf from the list, **added 6788** to his number and stuck him back in, with a total of 37539.

I went over one line and it was 2577, which is a number, so I yanked the last elf from the list, **added 2577** to his number and stuck him back in, with a total of 40116.

I went over one line and it was 7406, which is a number, so I yanked the last elf from the list, **added 7406** to his number and stuck him back in, with a total

of 47522.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6714, which is a number, so I yanked the last elf from the list, **added 6714** to his number and stuck him back in, with a total of 6714.

I went over one line and it was 1132, which is a number, so I yanked the last elf from the list, **added 1132** to his number and stuck him back in, with a total of 7846.

I went over one line and it was 4707, which is a number, so I yanked the last elf from the list, **added 4707** to his number and stuck him back in, with a total of 12553.

I went over one line and it was 8859, which is a number, so I yanked the last elf from the list, **added 8859** to his number and stuck him back in, with a total of 21412.

I went over one line and it was 9325, which is a number, so I yanked the last elf from the list, **added 9325** to his number and stuck him back in, with a total of 30737.

I went over one line and it was 7255, which is a number, so I yanked the last elf from the list, **added 7255** to his number and stuck him back in, with a total of 37992.

I went over one line and it was 7746, which is a number, so I yanked the last elf from the list, **added 7746** to his number and stuck him back in, with a total of 45738.

I went over one line and it was 7393, which is a number, so I yanked the last elf from the list, **added 7393** to his number and stuck him back in, with a total of 53131.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4925, which is a number, so I yanked the last elf from the list, **added 4925** to his number and stuck him back in, with a total of 4925.

I went over one line and it was 2772, which is a number, so I yanked the last elf from the list, **added 2772** to his number and stuck him back in, with a total of 7697.

I went over one line and it was 6414, which is a number, so I yanked the last elf from the list, **added 6414** to his number and stuck him back in, with a total of 14111.

I went over one line and it was 2083, which is a number, so I yanked the last elf from the list, **added 2083** to his number and stuck him back in, with a total of 16194.

I went over one line and it was 5913, which is a number, so I yanked the last elf from the list, **added 5913** to his number and stuck him back in, with a total of 22107.

I went over one line and it was 6499, which is a number, so I yanked the last elf from the list, **added 6499** to his number and stuck him back in, with a total of 28606.

I went over one line and it was 1838, which is a number, so I yanked the last elf from the list, **added 1838** to his number and stuck him back in, with a total of 30444.

I went over one line and it was 5955, which is a number, so I yanked the last elf from the list, **added 5955** to his number and stuck him back in, with a total of 36399.

I went over one line and it was 2627, which is a number, so I yanked the last elf from the list, **added 2627** to his number and stuck him back in, with a total of 39026.

I went over one line and it was 3507, which is a number, so I yanked the last elf from the list, **added 3507** to his number and stuck him back in, with a total of 42533.

I went over one line and it was 3485, which is a number, so I yanked the last elf from the list, **added 3485** to his number and stuck him back in, with a total of 46018.

I went over one line and it was 1041, which is a number, so I yanked the last elf from the list, **added 1041** to his number and stuck him back in, with a total of 47059.

I went over one line and it was 2445, which is a number, so I yanked the last elf from the list, **added 2445** to his number and stuck him back in, with a total of 49504.

I went over one line and it was 2860, which is a number, so I yanked the last elf from the list, **added 2860** to his number and stuck him back in, with a total

of 52364.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5739, which is a number, so I yanked the last elf from the list, **added 5739** to his number and stuck him back in, with a total of 5739.

I went over one line and it was 1228, which is a number, so I yanked the last elf from the list, **added 1228** to his number and stuck him back in, with a total of 6967.

I went over one line and it was 3578, which is a number, so I yanked the last elf from the list, **added 3578** to his number and stuck him back in, with a total of 10545.

I went over one line and it was 7053, which is a number, so I yanked the last elf from the list, **added 7053** to his number and stuck him back in, with a total of 17598.

I went over one line and it was 1333, which is a number, so I yanked the last elf from the list, **added 1333** to his number and stuck him back in, with a total of 18931.

I went over one line and it was 7932, which is a number, so I yanked the last elf from the list, **added 7932** to his number and stuck him back in, with a total of 26863.

I went over one line and it was 2778, which is a number, so I yanked the last elf from the list, **added 2778** to his number and stuck him back in, with a total of 29641.

I went over one line and it was 1264, which is a number, so I yanked the last elf from the list, **added 1264** to his number and stuck him back in, with a total of 30905.

I went over one line and it was 3221, which is a number, so I yanked the last elf from the list, **added 3221** to his number and stuck him back in, with a total of 34126.

I went over one line and it was 4462, which is a number, so I yanked the last elf from the list, **added 4462** to his number and stuck him back in, with a total of 38588.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1702, which is a number, so I yanked the last elf from the list, **added 1702** to his number and stuck him back in, with a total of 1702.

I went over one line and it was 1263, which is a number, so I yanked the last elf from the list, **added 1263** to his number and stuck him back in, with a total of 2965.

I went over one line and it was 24430, which is a number, so I yanked the last elf from the list, **added 24430** to his number and stuck him back in, with a total of 27395.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6711, which is a number, so I yanked the last elf from the list, **added 6711** to his number and stuck him back in, with a total of 6711.

I went over one line and it was 14533, which is a number, so I yanked the last elf from the list, **added 14533** to his number and stuck him back in, with a total of 21244.

I went over one line and it was 14161, which is a number, so I yanked the last elf from the list, **added 14161** to his number and stuck him back in, with a total of 35405.

I went over one line and it was 3384, which is a number, so I yanked the last elf from the list, **added 3384** to his number and stuck him back in, with a total of 38789.

I went over one line and it was 1798, which is a number, so I yanked the last elf from the list, **added 1798** to his number and stuck him back in, with a total of 40587.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6650, which is a number, so I yanked the last elf from the list, **added 6650** to his number and stuck him back in, with a total of 6650.

I went over one line and it was 8334, which is a number, so I yanked the last elf from the list, **added 8334** to his number and stuck him back in, with a total of 14984.

I went over one line and it was 2502, which is a number, so I yanked the last elf from the list, **added 2502** to his number and stuck him back in, with a total

of 17486.

I went over one line and it was 6261, which is a number, so I yanked the last elf from the list, **added 6261** to his number and stuck him back in, with a total of 23747.

I went over one line and it was 3300, which is a number, so I yanked the last elf from the list, **added 3300** to his number and stuck him back in, with a total of 27047.

I went over one line and it was 8793, which is a number, so I yanked the last elf from the list, **added 8793** to his number and stuck him back in, with a total of 35840.

I went over one line and it was 3729, which is a number, so I yanked the last elf from the list, **added 3729** to his number and stuck him back in, with a total of 39569.

I went over one line and it was 2148, which is a number, so I yanked the last elf from the list, **added 2148** to his number and stuck him back in, with a total of 41717.

I went over one line and it was 7511, which is a number, so I yanked the last elf from the list, **added 7511** to his number and stuck him back in, with a total of 49228.

I went over one line and it was 4702, which is a number, so I yanked the last elf from the list, **added 4702** to his number and stuck him back in, with a total of 53930.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5263, which is a number, so I yanked the last elf from the list, **added 5263** to his number and stuck him back in, with a total of 5263.

I went over one line and it was 2653, which is a number, so I yanked the last elf from the list, **added 2653** to his number and stuck him back in, with a total of 7916.

I went over one line and it was 2646, which is a number, so I yanked the last elf from the list, **added 2646** to his number and stuck him back in, with a total of 10562.

I went over one line and it was 10475, which is a number, so I yanked the last elf from the list, **added 10475** to his number and stuck him back in, with

a total of 21037.

I went over one line and it was 5210, which is a number, so I yanked the last elf from the list, **added 5210** to his number and stuck him back in, with a total of 26247.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6124, which is a number, so I yanked the last elf from the list, **added 6124** to his number and stuck him back in, with a total of 6124.

I went over one line and it was 9121, which is a number, so I yanked the last elf from the list, **added 9121** to his number and stuck him back in, with a total of 15245.

I went over one line and it was 12762, which is a number, so I yanked the last elf from the list, **added 12762** to his number and stuck him back in, with a total of 28007.

I went over one line and it was 5131, which is a number, so I yanked the last elf from the list, **added 5131** to his number and stuck him back in, with a total of 33138.

I went over one line and it was 15866, which is a number, so I yanked the last elf from the list, **added 15866** to his number and stuck him back in, with a total of 49004.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 20098, which is a number, so I yanked the last elf from the list, **added 20098** to his number and stuck him back in, with a total of 20098.

I went over one line and it was 17049, which is a number, so I yanked the last elf from the list, **added 17049** to his number and stuck him back in, with a total of 37147.

I went over one line and it was 6082, which is a number, so I yanked the last elf from the list, **added 6082** to his number and stuck him back in, with a total of 43229.

I went over one line and it was 12356, which is a number, so I yanked the last elf from the list, **added 12356** to his number and stuck him back in, with a total of 55585.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4615, which is a number, so I yanked the last elf from the list, **added 4615** to his number and stuck him back in, with a total of 4615.

I went over one line and it was 11397, which is a number, so I yanked the last elf from the list, **added 11397** to his number and stuck him back in, with a total of 16012.

I went over one line and it was 6506, which is a number, so I yanked the last elf from the list, **added 6506** to his number and stuck him back in, with a total of 22518.

I went over one line and it was 16351, which is a number, so I yanked the last elf from the list, **added 16351** to his number and stuck him back in, with a total of 38869.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2167, which is a number, so I yanked the last elf from the list, **added 2167** to his number and stuck him back in, with a total of 2167.

I went over one line and it was 3926, which is a number, so I yanked the last elf from the list, **added 3926** to his number and stuck him back in, with a total of 6093.

I went over one line and it was 4256, which is a number, so I yanked the last elf from the list, **added 4256** to his number and stuck him back in, with a total of 10349.

I went over one line and it was 5477, which is a number, so I yanked the last elf from the list, **added 5477** to his number and stuck him back in, with a total of 15826.

I went over one line and it was 5085, which is a number, so I yanked the last elf from the list, **added 5085** to his number and stuck him back in, with a total of 20911.

I went over one line and it was 1270, which is a number, so I yanked the last elf from the list, **added 1270** to his number and stuck him back in, with a total of 22181.

I went over one line and it was 4992, which is a number, so I yanked the last elf from the list, **added 4992** to his number and stuck him back in, with a total

of 27173.

I went over one line and it was 2015, which is a number, so I yanked the last elf from the list, **added 2015** to his number and stuck him back in, with a total of 29188.

I went over one line and it was 3316, which is a number, so I yanked the last elf from the list, **added 3316** to his number and stuck him back in, with a total of 32504.

I went over one line and it was 3057, which is a number, so I yanked the last elf from the list, **added 3057** to his number and stuck him back in, with a total of 35561.

I went over one line and it was 6018, which is a number, so I yanked the last elf from the list, **added 6018** to his number and stuck him back in, with a total of 41579.

I went over one line and it was 2026, which is a number, so I yanked the last elf from the list, **added 2026** to his number and stuck him back in, with a total of 43605.

I went over one line and it was 4406, which is a number, so I yanked the last elf from the list, **added 4406** to his number and stuck him back in, with a total of 48011.

I went over one line and it was 2973, which is a number, so I yanked the last elf from the list, **added 2973** to his number and stuck him back in, with a total of 50984.

I went over one line and it was 4209, which is a number, so I yanked the last elf from the list, **added 4209** to his number and stuck him back in, with a total of 55193.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 21818, which is a number, so I yanked the last elf from the list, **added 21818** to his number and stuck him back in, with a total of 21818.

I went over one line and it was 5205, which is a number, so I yanked the last elf from the list, **added 5205** to his number and stuck him back in, with a total of 27023.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9308, which is a number, so I yanked the last elf from the list, **added 9308** to his number and stuck him back in, with a total of 9308.

I went over one line and it was 4553, which is a number, so I yanked the last elf from the list, **added 4553** to his number and stuck him back in, with a total of 13861.

I went over one line and it was 4209, which is a number, so I yanked the last elf from the list, **added 4209** to his number and stuck him back in, with a total of 18070.

I went over one line and it was 2899, which is a number, so I yanked the last elf from the list, **added 2899** to his number and stuck him back in, with a total of 20969.

I went over one line and it was 5831, which is a number, so I yanked the last elf from the list, **added 5831** to his number and stuck him back in, with a total of 26800.

I went over one line and it was 11175, which is a number, so I yanked the last elf from the list, **added 11175** to his number and stuck him back in, with a total of 37975.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2175, which is a number, so I yanked the last elf from the list, **added 2175** to his number and stuck him back in, with a total of 2175.

I went over one line and it was 5686, which is a number, so I yanked the last elf from the list, **added 5686** to his number and stuck him back in, with a total of 7861.

I went over one line and it was 3649, which is a number, so I yanked the last elf from the list, **added 3649** to his number and stuck him back in, with a total of 11510.

I went over one line and it was 4884, which is a number, so I yanked the last elf from the list, **added 4884** to his number and stuck him back in, with a total of 16394.

I went over one line and it was 2654, which is a number, so I yanked the last elf from the list, **added 2654** to his number and stuck him back in, with a total of 19048.

I went over one line and it was 6049, which is a number, so I yanked the last elf from the list, **added 6049** to his number and stuck him back in, with a total of 25097.

I went over one line and it was 3099, which is a number, so I yanked the last elf from the list, **added 3099** to his number and stuck him back in, with a total of 28196.

I went over one line and it was 5191, which is a number, so I yanked the last elf from the list, **added 5191** to his number and stuck him back in, with a total of 33387.

I went over one line and it was 5017, which is a number, so I yanked the last elf from the list, **added 5017** to his number and stuck him back in, with a total of 38404.

I went over one line and it was 5553, which is a number, so I yanked the last elf from the list, **added 5553** to his number and stuck him back in, with a total of 43957.

I went over one line and it was 3016, which is a number, so I yanked the last elf from the list, **added 3016** to his number and stuck him back in, with a total of 46973.

I went over one line and it was 2743, which is a number, so I yanked the last elf from the list, **added 2743** to his number and stuck him back in, with a total of 49716.

I went over one line and it was 2211, which is a number, so I yanked the last elf from the list, **added 2211** to his number and stuck him back in, with a total of 51927.

I went over one line and it was 5615, which is a number, so I yanked the last elf from the list, **added 5615** to his number and stuck him back in, with a total of 57542.

I went over one line and it was 2750, which is a number, so I yanked the last elf from the list, **added 2750** to his number and stuck him back in, with a total of 60292.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5895, which is a number, so I yanked the last elf from the list, **added 5895** to his number and stuck him back in, with a total of 5895.

I went over one line and it was 5859, which is a number, so I yanked the last elf from the list, **added 5859** to his number and stuck him back in, with a total of 11754.

I went over one line and it was 2391, which is a number, so I yanked the last elf from the list, **added 2391** to his number and stuck him back in, with a total of 14145.

I went over one line and it was 1786, which is a number, so I yanked the last elf from the list, **added 1786** to his number and stuck him back in, with a total of 15931.

I went over one line and it was 1219, which is a number, so I yanked the last elf from the list, **added 1219** to his number and stuck him back in, with a total of 17150.

I went over one line and it was 4664, which is a number, so I yanked the last elf from the list, **added 4664** to his number and stuck him back in, with a total of 21814.

I went over one line and it was 4385, which is a number, so I yanked the last elf from the list, **added 4385** to his number and stuck him back in, with a total of 26199.

I went over one line and it was 3571, which is a number, so I yanked the last elf from the list, **added 3571** to his number and stuck him back in, with a total of 29770.

I went over one line and it was 6747, which is a number, so I yanked the last elf from the list, **added 6747** to his number and stuck him back in, with a total of 36517.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 21656, which is a number, so I yanked the last elf from the list, **added 21656** to his number and stuck him back in, with a total of 21656.

I went over one line and it was 6158, which is a number, so I yanked the last elf from the list, **added 6158** to his number and stuck him back in, with a total of 27814.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2384, which is a number, so I yanked the last elf from the list, **added 2384** to his number and stuck him back in, with a total

of 2384.

I went over one line and it was 4885, which is a number, so I yanked the last elf from the list, **added 4885** to his number and stuck him back in, with a total of 7269.

I went over one line and it was 4143, which is a number, so I yanked the last elf from the list, **added 4143** to his number and stuck him back in, with a total of 11412.

I went over one line and it was 2965, which is a number, so I yanked the last elf from the list, **added 2965** to his number and stuck him back in, with a total of 14377.

I went over one line and it was 5009, which is a number, so I yanked the last elf from the list, **added 5009** to his number and stuck him back in, with a total of 19386.

I went over one line and it was 1963, which is a number, so I yanked the last elf from the list, **added 1963** to his number and stuck him back in, with a total of 21349.

I went over one line and it was 2434, which is a number, so I yanked the last elf from the list, **added 2434** to his number and stuck him back in, with a total of 23783.

I went over one line and it was 3975, which is a number, so I yanked the last elf from the list, **added 3975** to his number and stuck him back in, with a total of 27758.

I went over one line and it was 4187, which is a number, so I yanked the last elf from the list, **added 4187** to his number and stuck him back in, with a total of 31945.

I went over one line and it was 6320, which is a number, so I yanked the last elf from the list, **added 6320** to his number and stuck him back in, with a total of 38265.

I went over one line and it was 2693, which is a number, so I yanked the last elf from the list, **added 2693** to his number and stuck him back in, with a total of 40958.

I went over one line and it was 2514, which is a number, so I yanked the last elf from the list, **added 2514** to his number and stuck him back in, with a total of 43472.

I went over one line and it was 5190, which is a number, so I yanked the last elf from the list, **added 5190** to his number and stuck him back in, with a total of 48662.

I went over one line and it was 1337, which is a number, so I yanked the last elf from the list, **added 1337** to his number and stuck him back in, with a total of 49999.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3558, which is a number, so I yanked the last elf from the list, **added 3558** to his number and stuck him back in, with a total of 3558.

I went over one line and it was 13277, which is a number, so I yanked the last elf from the list, **added 13277** to his number and stuck him back in, with a total of 16835.

I went over one line and it was 5659, which is a number, so I yanked the last elf from the list, **added 5659** to his number and stuck him back in, with a total of 22494.

I went over one line and it was 12432, which is a number, so I yanked the last elf from the list, **added 12432** to his number and stuck him back in, with a total of 34926.

I went over one line and it was 6800, which is a number, so I yanked the last elf from the list, **added 6800** to his number and stuck him back in, with a total of 41726.

I went over one line and it was 1444, which is a number, so I yanked the last elf from the list, **added 1444** to his number and stuck him back in, with a total of 43170.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5684, which is a number, so I yanked the last elf from the list, **added 5684** to his number and stuck him back in, with a total of 5684.

I went over one line and it was 3966, which is a number, so I yanked the last elf from the list, **added 3966** to his number and stuck him back in, with a total of 9650.

I went over one line and it was 3790, which is a number, so I yanked the last elf from the list, **added 3790** to his number and stuck him back in, with a total

of 13440.

I went over one line and it was 5530, which is a number, so I yanked the last elf from the list, **added 5530** to his number and stuck him back in, with a total of 18970.

I went over one line and it was 1018, which is a number, so I yanked the last elf from the list, **added 1018** to his number and stuck him back in, with a total of 19988.

I went over one line and it was 5860, which is a number, so I yanked the last elf from the list, **added 5860** to his number and stuck him back in, with a total of 25848.

I went over one line and it was 1260, which is a number, so I yanked the last elf from the list, **added 1260** to his number and stuck him back in, with a total of 27108.

I went over one line and it was 2663, which is a number, so I yanked the last elf from the list, **added 2663** to his number and stuck him back in, with a total of 29771.

I went over one line and it was 3382, which is a number, so I yanked the last elf from the list, **added 3382** to his number and stuck him back in, with a total of 33153.

I went over one line and it was 1699, which is a number, so I yanked the last elf from the list, **added 1699** to his number and stuck him back in, with a total of 34852.

I went over one line and it was 3573, which is a number, so I yanked the last elf from the list, **added 3573** to his number and stuck him back in, with a total of 38425.

I went over one line and it was 5785, which is a number, so I yanked the last elf from the list, **added 5785** to his number and stuck him back in, with a total of 44210.

I went over one line and it was 4221, which is a number, so I yanked the last elf from the list, **added 4221** to his number and stuck him back in, with a total of 48431.

I went over one line and it was 3293, which is a number, so I yanked the last elf from the list, **added 3293** to his number and stuck him back in, with a total of 51724.

I went over one line and it was 2612, which is a number, so I yanked the last elf from the list, **added 2612** to his number and stuck him back in, with a total of 54336.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6842, which is a number, so I yanked the last elf from the list, **added 6842** to his number and stuck him back in, with a total of 6842.

I went over one line and it was 7855, which is a number, so I yanked the last elf from the list, **added 7855** to his number and stuck him back in, with a total of 14697.

I went over one line and it was 10358, which is a number, so I yanked the last elf from the list, **added 10358** to his number and stuck him back in, with a total of 25055.

I went over one line and it was 7499, which is a number, so I yanked the last elf from the list, **added 7499** to his number and stuck him back in, with a total of 32554.

I went over one line and it was 4828, which is a number, so I yanked the last elf from the list, **added 4828** to his number and stuck him back in, with a total of 37382.

I went over one line and it was 9999, which is a number, so I yanked the last elf from the list, **added 9999** to his number and stuck him back in, with a total of 47381.

I went over one line and it was 6736, which is a number, so I yanked the last elf from the list, **added 6736** to his number and stuck him back in, with a total of 54117.

I went over one line and it was 10306, which is a number, so I yanked the last elf from the list, **added 10306** to his number and stuck him back in, with a total of 64423.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4733, which is a number, so I yanked the last elf from the list, **added 4733** to his number and stuck him back in, with a total of 4733.

I went over one line and it was 7411, which is a number, so I yanked the last elf from the list, **added 7411** to his number and stuck him back in, with a total

of 12144.

I went over one line and it was 2214, which is a number, so I yanked the last elf from the list, **added 2214** to his number and stuck him back in, with a total of 14358.

I went over one line and it was 3289, which is a number, so I yanked the last elf from the list, **added 3289** to his number and stuck him back in, with a total of 17647.

I went over one line and it was 8075, which is a number, so I yanked the last elf from the list, **added 8075** to his number and stuck him back in, with a total of 25722.

I went over one line and it was 4328, which is a number, so I yanked the last elf from the list, **added 4328** to his number and stuck him back in, with a total of 30050.

I went over one line and it was 5529, which is a number, so I yanked the last elf from the list, **added 5529** to his number and stuck him back in, with a total of 35579.

I went over one line and it was 1376, which is a number, so I yanked the last elf from the list, **added 1376** to his number and stuck him back in, with a total of 36955.

I went over one line and it was 6701, which is a number, so I yanked the last elf from the list, **added 6701** to his number and stuck him back in, with a total of 43656.

I went over one line and it was 3311, which is a number, so I yanked the last elf from the list, **added 3311** to his number and stuck him back in, with a total of 46967.

I went over one line and it was 1550, which is a number, so I yanked the last elf from the list, **added 1550** to his number and stuck him back in, with a total of 48517.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 10753, which is a number, so I yanked the last elf from the list, **added 10753** to his number and stuck him back in, with a total of 10753.

I went over one line and it was 2816, which is a number, so I yanked the last elf from the list, **added 2816** to his number and stuck him back in, with a total

of 13569.

I went over one line and it was 5490, which is a number, so I yanked the last elf from the list, **added 5490** to his number and stuck him back in, with a total of 19059.

I went over one line and it was 9546, which is a number, so I yanked the last elf from the list, **added 9546** to his number and stuck him back in, with a total of 28605.

I went over one line and it was 9574, which is a number, so I yanked the last elf from the list, **added 9574** to his number and stuck him back in, with a total of 38179.

I went over one line and it was 8698, which is a number, so I yanked the last elf from the list, **added 8698** to his number and stuck him back in, with a total of 46877.

I went over one line and it was 9240, which is a number, so I yanked the last elf from the list, **added 9240** to his number and stuck him back in, with a total of 56117.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 35760, which is a number, so I yanked the last elf from the list, **added 35760** to his number and stuck him back in, with a total of 35760.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 11913, which is a number, so I yanked the last elf from the list, **added 11913** to his number and stuck him back in, with a total of 11913.

I went over one line and it was 9817, which is a number, so I yanked the last elf from the list, **added 9817** to his number and stuck him back in, with a total of 21730.

I went over one line and it was 5260, which is a number, so I yanked the last elf from the list, **added 5260** to his number and stuck him back in, with a total of 26990.

I went over one line and it was 11404, which is a number, so I yanked the last elf from the list, **added 11404** to his number and stuck him back in, with a total of 38394.

I went over one line and it was 14859, which is a number, so I yanked the last elf from the list, **added 14859** to his number and stuck him back in, with a total of 53253.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8190, which is a number, so I yanked the last elf from the list, **added 8190** to his number and stuck him back in, with a total of 8190.

I went over one line and it was 3694, which is a number, so I yanked the last elf from the list, **added 3694** to his number and stuck him back in, with a total of 11884.

I went over one line and it was 7646, which is a number, so I yanked the last elf from the list, **added 7646** to his number and stuck him back in, with a total of 19530.

I went over one line and it was 9332, which is a number, so I yanked the last elf from the list, **added 9332** to his number and stuck him back in, with a total of 28862.

I went over one line and it was 3588, which is a number, so I yanked the last elf from the list, **added 3588** to his number and stuck him back in, with a total of 32450.

I went over one line and it was 8608, which is a number, so I yanked the last elf from the list, **added 8608** to his number and stuck him back in, with a total of 41058.

I went over one line and it was 3521, which is a number, so I yanked the last elf from the list, **added 3521** to his number and stuck him back in, with a total of 44579.

I went over one line and it was 5167, which is a number, so I yanked the last elf from the list, **added 5167** to his number and stuck him back in, with a total of 49746.

I went over one line and it was 2193, which is a number, so I yanked the last elf from the list, **added 2193** to his number and stuck him back in, with a total of 51939.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4743, which is a number, so I yanked the last elf from the list, **added 4743** to his number and stuck him back in, with a total

of 4743.

I went over one line and it was 4120, which is a number, so I yanked the last elf from the list, **added 4120** to his number and stuck him back in, with a total of 8863.

I went over one line and it was 1931, which is a number, so I yanked the last elf from the list, **added 1931** to his number and stuck him back in, with a total of 10794.

I went over one line and it was 3477, which is a number, so I yanked the last elf from the list, **added 3477** to his number and stuck him back in, with a total of 14271.

I went over one line and it was 3687, which is a number, so I yanked the last elf from the list, **added 3687** to his number and stuck him back in, with a total of 17958.

I went over one line and it was 2453, which is a number, so I yanked the last elf from the list, **added 2453** to his number and stuck him back in, with a total of 20411.

I went over one line and it was 2666, which is a number, so I yanked the last elf from the list, **added 2666** to his number and stuck him back in, with a total of 23077.

I went over one line and it was 7001, which is a number, so I yanked the last elf from the list, **added 7001** to his number and stuck him back in, with a total of 30078.

I went over one line and it was 1895, which is a number, so I yanked the last elf from the list, **added 1895** to his number and stuck him back in, with a total of 31973.

I went over one line and it was 4923, which is a number, so I yanked the last elf from the list, **added 4923** to his number and stuck him back in, with a total of 36896.

I went over one line and it was 3035, which is a number, so I yanked the last elf from the list, **added 3035** to his number and stuck him back in, with a total of 39931.

I went over one line and it was 2630, which is a number, so I yanked the last elf from the list, **added 2630** to his number and stuck him back in, with a total of 42561.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 4468, which is a number, so I yanked the last elf from the list, **added 4468** to his number and stuck him back in, with a total of 4468.

I went over one line and it was 2828, which is a number, so I yanked the last elf from the list, **added 2828** to his number and stuck him back in, with a total of 7296.

I went over one line and it was 13485, which is a number, so I yanked the last elf from the list, **added 13485** to his number and stuck him back in, with a total of 20781.

I went over one line and it was 3277, which is a number, so I yanked the last elf from the list, **added 3277** to his number and stuck him back in, with a total of 24058.

I went over one line and it was 3154, which is a number, so I yanked the last elf from the list, **added 3154** to his number and stuck him back in, with a total of 27212.

I went over one line and it was 11675, which is a number, so I yanked the last elf from the list, **added 11675** to his number and stuck him back in, with a total of 38887.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 7051, which is a number, so I yanked the last elf from the list, **added 7051** to his number and stuck him back in, with a total of 7051.

I went over one line and it was 2700, which is a number, so I yanked the last elf from the list, **added 2700** to his number and stuck him back in, with a total of 9751.

I went over one line and it was 9410, which is a number, so I yanked the last elf from the list, **added 9410** to his number and stuck him back in, with a total of 19161.

I went over one line and it was 6504, which is a number, so I yanked the last elf from the list, **added 6504** to his number and stuck him back in, with a total of 25665.

I went over one line and it was 6826, which is a number, so I yanked the last elf from the list, **added 6826** to his number and stuck him back in, with a total

of 32491.

I went over one line and it was 10176, which is a number, so I yanked the last elf from the list, **added 10176** to his number and stuck him back in, with a total of 42667.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 9119, which is a number, so I yanked the last elf from the list, **added 9119** to his number and stuck him back in, with a total of 9119.

I went over one line and it was 1701, which is a number, so I yanked the last elf from the list, **added 1701** to his number and stuck him back in, with a total of 10820.

I went over one line and it was 10677, which is a number, so I yanked the last elf from the list, **added 10677** to his number and stuck him back in, with a total of 21497.

I went over one line and it was 7991, which is a number, so I yanked the last elf from the list, **added 7991** to his number and stuck him back in, with a total of 29488.

I went over one line and it was 2200, which is a number, so I yanked the last elf from the list, **added 2200** to his number and stuck him back in, with a total of 31688.

I went over one line and it was 8689, which is a number, so I yanked the last elf from the list, **added 8689** to his number and stuck him back in, with a total of 40377.

I went over one line and it was 2906, which is a number, so I yanked the last elf from the list, **added 2906** to his number and stuck him back in, with a total of 43283.

I went over one line and it was 4077, which is a number, so I yanked the last elf from the list, **added 4077** to his number and stuck him back in, with a total of 47360.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 37282, which is a number, so I yanked the last elf from the list, **added 37282** to his number and stuck him back in, with a total of 37282.

I went over one line and it was 7225, which is a number, so I yanked the last elf from the list, **added 7225** to his number and stuck him back in, with a total of 44507.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1662, which is a number, so I yanked the last elf from the list, **added 1662** to his number and stuck him back in, with a total of 1662.

I went over one line and it was 5592, which is a number, so I yanked the last elf from the list, **added 5592** to his number and stuck him back in, with a total of 7254.

I went over one line and it was 4997, which is a number, so I yanked the last elf from the list, **added 4997** to his number and stuck him back in, with a total of 12251.

I went over one line and it was 5548, which is a number, so I yanked the last elf from the list, **added 5548** to his number and stuck him back in, with a total of 17799.

I went over one line and it was 3677, which is a number, so I yanked the last elf from the list, **added 3677** to his number and stuck him back in, with a total of 21476.

I went over one line and it was 4294, which is a number, so I yanked the last elf from the list, **added 4294** to his number and stuck him back in, with a total of 25770.

I went over one line and it was 2937, which is a number, so I yanked the last elf from the list, **added 2937** to his number and stuck him back in, with a total of 28707.

I went over one line and it was 1170, which is a number, so I yanked the last elf from the list, **added 1170** to his number and stuck him back in, with a total of 29877.

I went over one line and it was 5407, which is a number, so I yanked the last elf from the list, **added 5407** to his number and stuck him back in, with a total of 35284.

I went over one line and it was 2368, which is a number, so I yanked the last elf from the list, **added 2368** to his number and stuck him back in, with a total of 37652.

I went over one line and it was 3726, which is a number, so I yanked the last elf from the list, **added 3726** to his number and stuck him back in, with a total of 41378.

I went over one line and it was 6589, which is a number, so I yanked the last elf from the list, **added 6589** to his number and stuck him back in, with a total of 47967.

I went over one line and it was 6229, which is a number, so I yanked the last elf from the list, **added 6229** to his number and stuck him back in, with a total of 54196.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 12729, which is a number, so I yanked the last elf from the list, **added 12729** to his number and stuck him back in, with a total of 12729.

I went over one line and it was 13674, which is a number, so I yanked the last elf from the list, **added 13674** to his number and stuck him back in, with a total of 26403.

I went over one line and it was 10641, which is a number, so I yanked the last elf from the list, **added 10641** to his number and stuck him back in, with a total of 37044.

I went over one line and it was 6837, which is a number, so I yanked the last elf from the list, **added 6837** to his number and stuck him back in, with a total of 43881.

I went over one line and it was 6046, which is a number, so I yanked the last elf from the list, **added 6046** to his number and stuck him back in, with a total of 49927.

I went over one line and it was 1022, which is a number, so I yanked the last elf from the list, **added 1022** to his number and stuck him back in, with a total of 50949.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5812, which is a number, so I yanked the last elf from the list, **added 5812** to his number and stuck him back in, with a total of 5812.

I went over one line and it was 5667, which is a number, so I yanked the last elf from the list, **added 5667** to his number and stuck him back in, with a total

of 11479.

I went over one line and it was 1796, which is a number, so I yanked the last elf from the list, **added 1796** to his number and stuck him back in, with a total of 13275.

I went over one line and it was 6701, which is a number, so I yanked the last elf from the list, **added 6701** to his number and stuck him back in, with a total of 19976.

I went over one line and it was 3055, which is a number, so I yanked the last elf from the list, **added 3055** to his number and stuck him back in, with a total of 23031.

I went over one line and it was 3362, which is a number, so I yanked the last elf from the list, **added 3362** to his number and stuck him back in, with a total of 26393.

I went over one line and it was 6757, which is a number, so I yanked the last elf from the list, **added 6757** to his number and stuck him back in, with a total of 33150.

I went over one line and it was 3056, which is a number, so I yanked the last elf from the list, **added 3056** to his number and stuck him back in, with a total of 36206.

I went over one line and it was 1043, which is a number, so I yanked the last elf from the list, **added 1043** to his number and stuck him back in, with a total of 37249.

I went over one line and it was 4129, which is a number, so I yanked the last elf from the list, **added 4129** to his number and stuck him back in, with a total of 41378.

I went over one line and it was 4237, which is a number, so I yanked the last elf from the list, **added 4237** to his number and stuck him back in, with a total of 45615.

I went over one line and it was 3907, which is a number, so I yanked the last elf from the list, **added 3907** to his number and stuck him back in, with a total of 49522.

I went over one line and it was 4784, which is a number, so I yanked the last elf from the list, **added 4784** to his number and stuck him back in, with a total of 54306.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 8330, which is a number, so I yanked the last elf from the list, **added 8330** to his number and stuck him back in, with a total of 8330.

I went over one line and it was 5270, which is a number, so I yanked the last elf from the list, **added 5270** to his number and stuck him back in, with a total of 13600.

I went over one line and it was 4031, which is a number, so I yanked the last elf from the list, **added 4031** to his number and stuck him back in, with a total of 17631.

I went over one line and it was 9506, which is a number, so I yanked the last elf from the list, **added 9506** to his number and stuck him back in, with a total of 27137.

I went over one line and it was 9062, which is a number, so I yanked the last elf from the list, **added 9062** to his number and stuck him back in, with a total of 36199.

I went over one line and it was 2762, which is a number, so I yanked the last elf from the list, **added 2762** to his number and stuck him back in, with a total of 38961.

I went over one line and it was 5838, which is a number, so I yanked the last elf from the list, **added 5838** to his number and stuck him back in, with a total of 44799.

I went over one line and it was 7955, which is a number, so I yanked the last elf from the list, **added 7955** to his number and stuck him back in, with a total of 52754.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5869, which is a number, so I yanked the last elf from the list, **added 5869** to his number and stuck him back in, with a total of 5869.

I went over one line and it was 1162, which is a number, so I yanked the last elf from the list, **added 1162** to his number and stuck him back in, with a total of 7031.

I went over one line and it was 3744, which is a number, so I yanked the last elf from the list, **added 3744** to his number and stuck him back in, with a total

of 10775.

I went over one line and it was 3349, which is a number, so I yanked the last elf from the list, **added 3349** to his number and stuck him back in, with a total of 14124.

I went over one line and it was 5621, which is a number, so I yanked the last elf from the list, **added 5621** to his number and stuck him back in, with a total of 19745.

I went over one line and it was 7359, which is a number, so I yanked the last elf from the list, **added 7359** to his number and stuck him back in, with a total of 27104.

I went over one line and it was 4782, which is a number, so I yanked the last elf from the list, **added 4782** to his number and stuck him back in, with a total of 31886.

I went over one line and it was 1259, which is a number, so I yanked the last elf from the list, **added 1259** to his number and stuck him back in, with a total of 33145.

I went over one line and it was 3904, which is a number, so I yanked the last elf from the list, **added 3904** to his number and stuck him back in, with a total of 37049.

I went over one line and it was 3692, which is a number, so I yanked the last elf from the list, **added 3692** to his number and stuck him back in, with a total of 40741.

I went over one line and it was 3836, which is a number, so I yanked the last elf from the list, **added 3836** to his number and stuck him back in, with a total of 44577.

I went over one line and it was 5684, which is a number, so I yanked the last elf from the list, **added 5684** to his number and stuck him back in, with a total of 50261.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 1077, which is a number, so I yanked the last elf from the list, **added 1077** to his number and stuck him back in, with a total of 1077.

I went over one line and it was 1738, which is a number, so I yanked the last elf from the list, **added 1738** to his number and stuck him back in, with a total

of 2815.

I went over one line and it was 1787, which is a number, so I yanked the last elf from the list, **added 1787** to his number and stuck him back in, with a total of 4602.

I went over one line and it was 4504, which is a number, so I yanked the last elf from the list, **added 4504** to his number and stuck him back in, with a total of 9106.

I went over one line and it was 5669, which is a number, so I yanked the last elf from the list, **added 5669** to his number and stuck him back in, with a total of 14775.

I went over one line and it was 5257, which is a number, so I yanked the last elf from the list, **added 5257** to his number and stuck him back in, with a total of 20032.

I went over one line and it was 2325, which is a number, so I yanked the last elf from the list, **added 2325** to his number and stuck him back in, with a total of 22357.

I went over one line and it was 2813, which is a number, so I yanked the last elf from the list, **added 2813** to his number and stuck him back in, with a total of 25170.

I went over one line and it was 4297, which is a number, so I yanked the last elf from the list, **added 4297** to his number and stuck him back in, with a total of 29467.

I went over one line and it was 1652, which is a number, so I yanked the last elf from the list, **added 1652** to his number and stuck him back in, with a total of 31119.

I went over one line and it was 4500, which is a number, so I yanked the last elf from the list, **added 4500** to his number and stuck him back in, with a total of 35619.

I went over one line and it was 5801, which is a number, so I yanked the last elf from the list, **added 5801** to his number and stuck him back in, with a total of 41420.

I went over one line and it was 4297, which is a number, so I yanked the last elf from the list, **added 4297** to his number and stuck him back in, with a total of 45717.

I went over one line and it was 2362, which is a number, so I yanked the last elf from the list, **added 2362** to his number and stuck him back in, with a total of 48079.

I went over one line and it was 1616, which is a number, so I yanked the last elf from the list, **added 1616** to his number and stuck him back in, with a total of 49695.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6720, which is a number, so I yanked the last elf from the list, **added 6720** to his number and stuck him back in, with a total of 6720.

I went over one line and it was 2446, which is a number, so I yanked the last elf from the list, **added 2446** to his number and stuck him back in, with a total of 9166.

I went over one line and it was 4444, which is a number, so I yanked the last elf from the list, **added 4444** to his number and stuck him back in, with a total of 13610.

I went over one line and it was 4132, which is a number, so I yanked the last elf from the list, **added 4132** to his number and stuck him back in, with a total of 17742.

I went over one line and it was 4665, which is a number, so I yanked the last elf from the list, **added 4665** to his number and stuck him back in, with a total of 22407.

I went over one line and it was 2280, which is a number, so I yanked the last elf from the list, **added 2280** to his number and stuck him back in, with a total of 24687.

I went over one line and it was 4203, which is a number, so I yanked the last elf from the list, **added 4203** to his number and stuck him back in, with a total of 28890.

I went over one line and it was 6500, which is a number, so I yanked the last elf from the list, **added 6500** to his number and stuck him back in, with a total of 35390.

I went over one line and it was 6941, which is a number, so I yanked the last elf from the list, **added 6941** to his number and stuck him back in, with a total of 42331.

I went over one line and it was 6667, which is a number, so I yanked the last elf from the list, **added 6667** to his number and stuck him back in, with a total of 48998.

I went over one line and it was 1867, which is a number, so I yanked the last elf from the list, **added 1867** to his number and stuck him back in, with a total of 50865.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 3560, which is a number, so I yanked the last elf from the list, **added 3560** to his number and stuck him back in, with a total of 3560.

I went over one line and it was 3111, which is a number, so I yanked the last elf from the list, **added 3111** to his number and stuck him back in, with a total of 6671.

I went over one line and it was 5179, which is a number, so I yanked the last elf from the list, **added 5179** to his number and stuck him back in, with a total of 11850.

I went over one line and it was 1352, which is a number, so I yanked the last elf from the list, **added 1352** to his number and stuck him back in, with a total of 13202.

I went over one line and it was 6779, which is a number, so I yanked the last elf from the list, **added 6779** to his number and stuck him back in, with a total of 19981.

I went over one line and it was 11684, which is a number, so I yanked the last elf from the list, **added 11684** to his number and stuck him back in, with a total of 31665.

I went over one line and it was 2498, which is a number, so I yanked the last elf from the list, **added 2498** to his number and stuck him back in, with a total of 34163.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 6316, which is a number, so I yanked the last elf from the list, **added 6316** to his number and stuck him back in, with a total of 6316.

I went over one line and it was 1792, which is a number, so I yanked the last elf from the list, **added 1792** to his number and stuck him back in, with a total

of 8108.

I went over one line and it was 4065, which is a number, so I yanked the last elf from the list, **added 4065** to his number and stuck him back in, with a total of 12173.

I went over one line and it was 3358, which is a number, so I yanked the last elf from the list, **added 3358** to his number and stuck him back in, with a total of 15531.

I went over one line and it was 4597, which is a number, so I yanked the last elf from the list, **added 4597** to his number and stuck him back in, with a total of 20128.

I went over one line and it was 5573, which is a number, so I yanked the last elf from the list, **added 5573** to his number and stuck him back in, with a total of 25701.

I went over one line and it was 3097, which is a number, so I yanked the last elf from the list, **added 3097** to his number and stuck him back in, with a total of 28798.

I went over one line and it was 1235, which is a number, so I yanked the last elf from the list, **added 1235** to his number and stuck him back in, with a total of 30033.

I went over one line and it was 4623, which is a number, so I yanked the last elf from the list, **added 4623** to his number and stuck him back in, with a total of 34656.

I went over one line and it was 2981, which is a number, so I yanked the last elf from the list, **added 2981** to his number and stuck him back in, with a total of 37637.

I went over one line and it was 6725, which is a number, so I yanked the last elf from the list, **added 6725** to his number and stuck him back in, with a total of 44362.

I went over one line and it was 1251, which is a number, so I yanked the last elf from the list, **added 1251** to his number and stuck him back in, with a total of 45613.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 2218, which is a number, so I yanked the last elf from the list, **added 2218** to his number and stuck him back in, with a total

of 2218.

I went over one line and it was 4275, which is a number, so I yanked the last elf from the list, **added 4275** to his number and stuck him back in, with a total of 6493.

I went over one line and it was 5627, which is a number, so I yanked the last elf from the list, **added 5627** to his number and stuck him back in, with a total of 12120.

I went over one line and it was 2334, which is a number, so I yanked the last elf from the list, **added 2334** to his number and stuck him back in, with a total of 14454.

I went over one line and it was 2954, which is a number, so I yanked the last elf from the list, **added 2954** to his number and stuck him back in, with a total of 17408.

I went over one line and it was 4955, which is a number, so I yanked the last elf from the list, **added 4955** to his number and stuck him back in, with a total of 22363.

I went over one line and it was 2480, which is a number, so I yanked the last elf from the list, **added 2480** to his number and stuck him back in, with a total of 24843.

I went over one line and it was 2248, which is a number, so I yanked the last elf from the list, **added 2248** to his number and stuck him back in, with a total of 27091.

I went over one line and it was 1305, which is a number, so I yanked the last elf from the list, **added 1305** to his number and stuck him back in, with a total of 28396.

I went over one line and it was 3325, which is a number, so I yanked the last elf from the list, **added 3325** to his number and stuck him back in, with a total of 31721.

I went over one line and it was 2974, which is a number, so I yanked the last elf from the list, **added 2974** to his number and stuck him back in, with a total of 34695.

I went over one line and it was 2971, which is a number, so I yanked the last elf from the list, **added 2971** to his number and stuck him back in, with a total of 37666.

I went over one line and it was 1400, which is a number, so I yanked the last elf from the list, **added 1400** to his number and stuck him back in, with a total of 39066.

I went over one line and it was 5745, which is a number, so I yanked the last elf from the list, **added 5745** to his number and stuck him back in, with a total of 44811.

I went over one line and it was 5606, which is a number, so I yanked the last elf from the list, **added 5606** to his number and stuck him back in, with a total of 50417.

I went over one line and it was , which is an empty line, so I **added a new elf**.

I went over one line and it was 5511, which is a number, so I yanked the last elf from the list, **added 5511** to his number and stuck him back in, with a total of 5511.

I went over one line and it was 5981, which is a number, so I yanked the last elf from the list, **added 5981** to his number and stuck him back in, with a total of 11492.

I went over one line and it was 1117, which is a number, so I yanked the last elf from the list, **added 1117** to his number and stuck him back in, with a total of 12609.

I went over one line and it was 4137, which is a number, so I yanked the last elf from the list, **added 4137** to his number and stuck him back in, with a total of 16746.

I went over one line and it was 5442, which is a number, so I yanked the last elf from the list, **added 5442** to his number and stuck him back in, with a total of 22188.

I went over one line and it was 3205, which is a number, so I yanked the last elf from the list, **added 3205** to his number and stuck him back in, with a total of 25393.

I went over one line and it was 1798, which is a number, so I yanked the last elf from the list, **added 1798** to his number and stuck him back in, with a total of 27191.

I went over one line and it was 3667, which is a number, so I yanked the last elf from the list, **added 3667** to his number and stuck him back in, with a total of 30858.

I went over one line and it was 4508, which is a number, so I yanked the last elf from the list, **added 4508** to his number and stuck him back in, with a total of 35366.

I went over one line and it was 2507, which is a number, so I yanked the last elf from the list, **added 2507** to his number and stuck him back in, with a total of 37873.

I went over one line and it was 3980, which is a number, so I yanked the last elf from the list, **added 3980** to his number and stuck him back in, with a total of 41853.

I went over one line and it was 5785, which is a number, so I yanked the last elf from the list, **added 5785** to his number and stuck him back in, with a total of 47638.

I went over one line and it was 2912, which is a number, so I yanked the last elf from the list, **added 2912** to his number and stuck him back in, with a total of 50550.

I went over one line and it was 5664, which is a number, so I yanked the last elf from the list, **added 5664** to his number and stuck him back in, with a total of 56214.

I went over one line and it was 2775, which is a number, so I yanked the last elf from the list, **added 2775** to his number and stuck him back in, with a total of 58989.

Now that all calories are counted, let's find out which elf carries the plumpest bounty and how much that is.

1.3 Results

Getting the highest sum is easier. All we need to do is sort the elves, which leaves us with the top elf's bundle of snacks worth **66616 calories!**

Ah, but by the time we calculated the answer to the Elves' question, they've already realized that the Elf carrying the most Calories of food might eventually run out of snacks.

To avoid this unacceptable situation, the Elves would instead like to know the total Calories carried by the top three Elves carrying the most Calories. That way, even if one of those Elves runs out of snacks, they still have two backups.

Fortunately, our calculations are all prepared for this task. We have but to take the top three of the sorted sequence and sum them, which leaves us with **199172 calories!**
